TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of HD. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336194 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336194 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of IGF1, a GAM336194 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336194 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336194 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of IL1A, a GAM336194 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336194 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336194 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of NGB, a GAM336194 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336194 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336194 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of PRND, a GAM336194 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336195 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336195 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336195 is therefore inhibition of APPBP2, a GAM336195 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336195 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336195 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of BACE2, a GAM336195 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336195 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336195 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of BCHE. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336195 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336195 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of CTSB. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336195 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336195 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of CTSK. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336195 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336195 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of FHL2, a GAM336195 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336195 HD A A TGGGCAA CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336195 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of HD. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336195 IGF1 A A TGGGCAA CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336195 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of IGF1, a GAM336195 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336195 IL1A A A TGGGCAA CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336195 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of IL1A, a GAM336195 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336195 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336195 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of NGB, a GAM336195 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336195 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336195 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336195 is therefore inhibition of PRND, a GAM336195 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336196 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336196 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336196 is therefore inhibition of APPBP2, a GAM336196 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336196 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336196 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of BACE2, a GAM336196 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336196 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336196 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of BCHE. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336196 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336196 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of CTSB. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336196 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336196 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of CTSK. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336196 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336196 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of FHL2, a GAM336196 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336196 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336196 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of HD. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336196 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336196 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of IGF1, a GAM336196 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336196 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336196 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of IL1A, a GAM336196 target gene which stimulates thymocyte

proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336196 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336196 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of NGB, a GAM336196 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336196 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336196 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336196 is therefore inhibition of PRND, a GAM336196 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336197 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336197 target gene. APPBP2 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336197 is therefore inhibition of APPBP2, a GAM336197 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336197 BACE2 CACTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336197 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of BACE2, a GAM336197 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336197 BCHE CACTGCACTCCAGCC A A TGGGCAA BCHE (Accession NM_000055.1) is another GAM336197 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of BCHE. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336197 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336197 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of CTSB. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336197 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336197 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of CTSK. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336197 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336197 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of FHL2, a GAM336197 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336197 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336197 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of HD. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336197 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336197 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of IGF1, a GAM336197 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336197 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336197 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of IL1A, a GAM336197 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336197 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336197 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of NGB, a GAM336197 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336197 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336197 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336197 is therefore inhibition of PRND, a GAM336197 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336198 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336198 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336198 is therefore inhibition of APPBP2, a GAM336198 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336198 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336198 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of BACE2, a GAM336198 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336198 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336198 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of BCHE. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336198 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336198 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of CTSB. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336198 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336198 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of CTSK. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336198 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336198 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of FHL2, a GAM336198 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336198 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336198 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of HD. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336198 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336198 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of IGF1, a GAM336198 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336198 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336198 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of IL1A, a GAM336198 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336198 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336198 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of NGB, a GAM336198 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336198 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336198 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336198 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336198 is therefore inhibition of PRND, a GAM336198 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336198 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336199 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336199 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336199 is therefore inhibition of APPBP2, a GAM336199 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336199 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336199 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of BACE2, a GAM336199 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336199 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336199 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of BCHE. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336199 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336199 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of CTSB. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336199 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336199 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of CTSK. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336199 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336199 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of FHL2, a GAM336199 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336199 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336199 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of HD. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HD.

GAM336199 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336199 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of IGF1, a GAM336199 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336199 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336199 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of IL1A, a GAM336199 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336199 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336199 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336199 is therefore inhibition of NGB, a GAM336199 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336199 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336199 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336199 is therefore inhibition of PRND, a GAM336199 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336200 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336200 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336200 is therefore inhibition of APPBP2, a GAM336200 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336200 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336200 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of BACE2, a GAM336200 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336200 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336200 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of BCHE. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336200 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336200 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of CTSB. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336200 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336200 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of CTSK. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336200 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336200 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of FHL2, a GAM336200 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336200 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336200 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of HD. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336200 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336200 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of IGF1, a GAM336200 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336200 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336200 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of IL1A, a GAM336200 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336200 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336200 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of NGB, a GAM336200 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336200 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336200 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336200 is therefore inhibition of PRND, a GAM336200 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336201 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336201 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336201 is therefore inhibition of APPBP2, a GAM336201 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336201 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336201 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of BACE2, a GAM336201 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336201 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336201 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of BCHE. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336201 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336201 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of CTSB. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336201 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336201 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of CTSK. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336201 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336201 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of FHL2, a GAM336201 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336201 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336201 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of HD. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336201 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336201 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of IGF1, a GAM336201 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336201 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336201 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of IL1A, a GAM336201 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336201 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336201 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of NGB, a GAM336201 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336201 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336201 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336201 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336201 is therefore inhibition of PRND, a GAM336201 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336202 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336202 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336202 is therefore inhibition of APPBP2, a GAM336202 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336202 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336202 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of BACE2, a GAM336202 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336202 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336202 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of BCHE. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336202 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336202 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of CTSB. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336202 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336202 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of CTSK. Accordingly, utilities of GAM336202 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336202 FHL2 A A CACTGCACTCCAGCC TGGGCAA A Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336202 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of FHL2, a GAM336202 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336202 HD HD A A CACTGCACTCCAGCC TGGGCAA A HD (Accession NM_002111.3) is another GAM336202 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of HD. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336202 IGF1 A A CACTGCACTCCAGCC TGGGCAA A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336202 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of IGF1, a GAM336202 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336202 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336202 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of IL1A, a GAM336202 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336202 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336202 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of NGB, a GAM336202 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336202 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336202 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336202 is therefore inhibition of PRND, a GAM336202 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336203 APBB2 AGTGGGATGGAGTCA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GCAGAAG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336203 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336203 is therefore inhibition of APBB2, a GAM336203 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336203 GLUL AGTGGGATGGAGTCA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
GCAGAAG NM_002065.3) is another GAM336203 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336203 is therefore inhibition of GLUL, a GAM336203 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function

of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336203 IL1A AGTGGGATGGAGTCA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

GCAGAAG GAM336203 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336203 is therefore inhibition of IL1A, a GAM336203 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336203 NGB AGTGGGATGGAGTCA Neuroglobin (NGB, Accession NM_021257.2) is another GAM336203 A A

GCAGAAG target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336203 is therefore inhibition of NGB, a GAM336203 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336203 PRND AGTGGGATGGAGTCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GCAGAAG another GAM336203 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336203 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336203 is therefore inhibition of PRND, a GAM336203 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336204 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336204 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336204 is therefore inhibition of APPBP2, a GAM336204 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336204 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336204 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of BACE2, a GAM336204 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336204 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336204 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of BCHE. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336204 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336204 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of CTSB. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336204 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336204 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of CTSK. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336204 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336204 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of FHL2, a GAM336204 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336204 HD A A TGGGCAA CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336204 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of HD. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336204 IGF1 A A TGGGCAA CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336204 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of IGF1, a GAM336204 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336204 IL1A A A TGGGCAA CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336204 target gene. IL1A BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of IL1A, a GAM336204 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336204 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336204 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of NGB, a GAM336204 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336204 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336204 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336204 is therefore inhibition of PRND, a GAM336204 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336205 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336205 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336205 is therefore inhibition of APPBP2, a GAM336205 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336205 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336205 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of BACE2, a GAM336205 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336205 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336205 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of BCHE. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336205 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336205 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of CTSB. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336205 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336205 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of CTSK. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336205 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336205 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of

FHL2, a GAM336205 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336205 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336205 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of HD. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336205 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336205 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of IGF1, a GAM336205 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336205 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336205 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of IL1A, a GAM336205 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336205 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336205 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of NGB, a GAM336205 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336205 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336205 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336205 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336205 is therefore inhibition of PRND, a GAM336205 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336206 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336206 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336206 is therefore inhibition of APPBP2, a GAM336206 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336206 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336206 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of BACE2, a GAM336206 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336206 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336206 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of BCHE. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336206 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336206 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of CTSB. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336206 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336206 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of CTSK. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336206 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336206 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of FHL2, a GAM336206 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336206 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336206 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of HD. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336206 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336206 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of IGF1, a GAM336206 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336206 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336206 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of IL1A, a GAM336206 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation &

proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336206 NGB CACTGCACTCCAGCC TGGGCAA A A

Neuroglobin (NGB, Accession NM_021257.2) is another target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of NGB, a GAM336206 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336206 PRND CACTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336206 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336206 is therefore inhibition of PRND, a GAM336206 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336207 APPBP2 CACTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336207 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336207 is therefore inhibition of APPBP2, a GAM336207 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336207 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336207 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of BACE2, a GAM336207 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336207 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336207 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of BCHE. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336207 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336207 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of CTSB. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336207 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336207 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of CTSK. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336207 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336207 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of FHL2, a GAM336207 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336207 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336207 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of HD. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336207 IGF1 A CACTGCACTCCAGCC A TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336207 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of IGF1, a GAM336207 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336207 IL1A A CACTGCACTCCAGCC A TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336207 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of IL1A, a GAM336207 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM281.

GAM336207 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336207 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of NGB, a GAM336207 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336207 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336207 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336207 is therefore inhibition of PRND, a GAM336207 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336208 APBB2 AGTGGGATGGAGTCA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GCAGAAG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336208 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336208 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336208 is therefore inhibition of APBB2, a GAM336208 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336208 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336208 GLUL AGTGGGATGGAGTCA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
GCAGAAG NM_002065.3) is another GAM336208 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336208 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336208 is therefore inhibition of GLUL, a GAM336208 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336208 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336208 IL1A AGTGGGATGGAGTCA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
GCAGAAG GAM336208 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336208 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336208 is therefore inhibition of IL1A, a GAM336208 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336208 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336208 NGB AGTGGGATGGAGTCA Neuroglobin (NGB, Accession NM_021257.2) is another GAM336208 A A

GCAGAAG target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336208 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336208 is therefore inhibition of NGB, a GAM336208 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336208 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336208 PRND AGTGGGATGGAGTCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GCAGAAG another GAM336208 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336208 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336208 is therefore inhibition of PRND, a GAM336208 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336208 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336209 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336209 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336209 is therefore inhibition of APPBP2, a GAM336209 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336209 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336209 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of BACE2, a GAM336209 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336209 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336209 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of BCHE. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336209 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336209 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of CTSB. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336209 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336209 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of CTSK. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336209 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336209 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of FHL2, a GAM336209 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336209 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336209 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of HD. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HD.

GAM336209 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336209 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of IGF1, a GAM336209 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336209 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336209 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336209 is therefore inhibition of IL1A, a GAM336209 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336209 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336209 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336209 is therefore inhibition of NGB, a GAM336209 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336209 PRND CACTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336209 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336209 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336209 is therefore inhibition of PRND, a GAM336209 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336210 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336210 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336210 is therefore inhibition of APPBP2, a GAM336210 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336210 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336210 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of BACE2, a GAM336210 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336210 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336210 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of BCHE. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336210 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336210 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of CTSB. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336210 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336210 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of CTSK. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336210 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336210 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of FHL2, a GAM336210 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336210 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336210 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of HD. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336210 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336210 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of IGF1, a GAM336210 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336210 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336210 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of IL1A, a GAM336210 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336210 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336210 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of NGB, a GAM336210 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336210 PRND CACTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336210 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336210 is therefore inhibition of PRND, a GAM336210 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336211 APPBP2 CACTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336211 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336211 is therefore inhibition of APPBP2, a GAM336211 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336211 BACE2 CACTGCACTCCAGCC TGGGCAA A A

Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336211 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of BACE2, a GAM336211 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336211 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336211 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of BCHE. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336211 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336211 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of CTSB. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336211 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336211 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of CTSK. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336211 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336211 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of FHL2, a GAM336211 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336211 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336211 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of HD. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336211 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336211 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of IGF1, a GAM336211 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336211 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336211 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of IL1A, a GAM336211 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336211 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336211 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of NGB, a GAM336211 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336211 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336211 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336211 is therefore inhibition of PRND, a GAM336211 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336212 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336212 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336212 is therefore inhibition of APPBP2, a GAM336212 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336212 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336212 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of BACE2, a GAM336212 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336212 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336212 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of BCHE. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336212 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336212 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of CTSB. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336212 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336212 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of CTSK. Accordingly, utilities of GAM336212 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336212 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336212 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of FHL2, a GAM336212 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336212 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336212 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of HD. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336212 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336212 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of IGF1, a GAM336212 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336212 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A TGGGCAA GAM336212 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of IL1A, a GAM336212 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336212 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336212 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of NGB, a GAM336212 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336212 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336212 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336212 is therefore inhibition of PRND, a GAM336212 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336213 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336213 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336213 is therefore inhibition of APPBP2, a GAM336213 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336213 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336213 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336213 is therefore inhibition of BACE2, a GAM336213 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336213 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336213 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of BCHE. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336213 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336213 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of CTSB. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336213 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336213 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of CTSK. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336213 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336213 target gene. FHL2 BINDING SITE1 and FHL2 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of FHL2, a GAM336213 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336213 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336213 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of HD. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336213 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336213 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of IGF1, a GAM336213 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM336213 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336213 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of IL1A, a GAM336213 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336213 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336213 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of NGB, a GAM336213 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336213 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336213 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336213 is therefore inhibition of PRND, a GAM336213 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336214 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336214 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336214 is therefore inhibition of APPBP2, a GAM336214 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336214 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336214 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of BACE2, a GAM336214 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336214 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336214 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of BCHE. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336214 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336214 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of CTSB. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336214 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336214 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of CTSK. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336214 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336214 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336214 is therefore inhibition of FHL2, a GAM336214 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336214 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336214 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of HD. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336214 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336214 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of IGF1, a GAM336214 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336214 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336214 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of IL1A, a GAM336214 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336214 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336214 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of NGB, a GAM336214 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336214 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336214 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336214 is therefore inhibition of PRND, a GAM336214 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336215 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336215 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336215 is therefore inhibition of APPBP2, a GAM336215 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336215 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336215 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of BACE2, a GAM336215 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336215 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336215 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of BCHE. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336215 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147782.1) is another GAM336215 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of CTSB. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336215 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336215 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of CTSK. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336215 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336215 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of FHL2, a GAM336215 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336215 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336215 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of HD. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336215 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336215 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of IGF1, a GAM336215 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336215 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336215 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of IL1A, a GAM336215 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336215 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336215 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of NGB, a GAM336215 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336215 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336215 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336215 is therefore inhibition of PRND, a GAM336215 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336216 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336216 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336216 is therefore inhibition of APPBP2, a GAM336216 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336216 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336216 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of BACE2, a GAM336216 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336216 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336216 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of BCHE. Accordingly, utilities of GAM336216 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336216 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336216 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of CTSB. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336216 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336216 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of CTSK. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336216 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336216 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of FHL2, a GAM336216 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336216 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336216 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of HD. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336216 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336216 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of IGF1, a GAM336216 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336216 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336216 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of IL1A, a GAM336216 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336216 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336216 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of NGB, a GAM336216 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336216 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336216 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336216 is therefore inhibition of PRND, a GAM336216 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336217 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336217 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336217 is therefore inhibition of APPBP2, a GAM336217 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336217 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336217 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of BACE2, a GAM336217 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336217 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336217 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of BCHE. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336217 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336217 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites

found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of CTSB. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336217 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336217 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of CTSK. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336217 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336217 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of FHL2, a GAM336217 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336217 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336217 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of HD. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336217 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336217 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of IGF1, a GAM336217 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336217 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A
TGGGCAA GAM336217 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of IL1A, a GAM336217 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336217 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336217 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of NGB, a GAM336217 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336217 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336217 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336217 is therefore inhibition of PRND, a GAM336217 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336218 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336218 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336218 is therefore inhibition of APPBP2,

a GAM336218 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336218 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336218 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of BACE2, a GAM336218 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336218 BCHE CACTGCACTCCAGCC TGGGCAA A A BCHE (Accession NM_000055.1) is another GAM336218 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of BCHE. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336218 CTSB CACTGCACTCCAGCC TGGGCAA A A CTSB (Accession NM_147780.1) is another GAM336218 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of CTSB. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336218 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336218 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of CTSK. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336218 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336218 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of FHL2, a GAM336218 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336218 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336218 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of HD. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336218 IGF1 A CACTGCACTCCAGCC A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession TGGGCAA NM_000618.2) is another GAM336218 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of IGF1, a GAM336218 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336218 IL1A A CACTGCACTCCAGCC A Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another TGGGCAA GAM336218 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of IL1A, a GAM336218 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336218 NGB A CACTGCACTCCAGCC A Neuroglobin (NGB, Accession NM_021257.2) is another GAM336218 TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of NGB, a GAM336218 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336218 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336218 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336218 is therefore inhibition of PRND, a GAM336218 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336219 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336219 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336219 is therefore inhibition of APPBP2, a GAM336219 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336219 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336219 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of BACE2, a GAM336219 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336219 BCHE CACTGCACTCCAGCC TGGGCAA A A BCHE (Accession NM_000055.1) is another GAM336219 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of BCHE. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336219 CTSB CACTGCACTCCAGCC TGGGCAA A A CTSB (Accession NM_147780.1) is another GAM336219 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of CTSB. Accordingly, utilities of GAM336219 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336219 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336219 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of CTSK. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336219 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336219 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of FHL2, a GAM336219 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336219 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336219 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of HD. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336219 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336219 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of IGF1, a GAM336219 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336219 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336219 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of IL1A, a GAM336219 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336219 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336219 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of

NGB, a GAM336219 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336219 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336219 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336219 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336219 is therefore inhibition of PRND, a GAM336219 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336219 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336220 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336220 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336220 is therefore inhibition of APPBP2, a GAM336220 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336220 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336220 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of BACE2, a GAM336220 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336220 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336220 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of BCHE. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336220 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336220 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of CTSB. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336220 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336220 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of CTSK. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336220 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336220 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of FHL2, a GAM336220 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336220 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336220 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of HD. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336220 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336220 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of IGF1, a GAM336220 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336220 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336220 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of IL1A, a GAM336220 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336220 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336220 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of NGB, a GAM336220 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336220 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336220 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336220 is therefore inhibition of PRND, a GAM336220 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336221 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336221 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336221 is therefore inhibition of APPBP2, a GAM336221 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336221 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336221 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of BACE2, a GAM336221 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336221 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336221 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of BCHE. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336221 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336221 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of CTSB. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336221 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336221 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of CTSK. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336221 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336221 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of FHL2, a GAM336221 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336221 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336221 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of HD. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336221 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336221 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of

IGF1, a GAM336221 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336221 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336221 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of IL1A, a GAM336221 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336221 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336221 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of NGB, a GAM336221 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336221 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336221 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336221 is therefore inhibition of PRND, a GAM336221 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336222 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336222 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336222 is therefore inhibition of APPBP2, a GAM336222 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336222 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336222 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of BACE2, a GAM336222 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336222 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336222 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of BCHE. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336222 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336222 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of CTSB. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336222 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336222 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of CTSK. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336222 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336222 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of FHL2, a GAM336222 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336222 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336222 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of HD. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336222 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336222 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of IGF1, a GAM336222 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336222 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336222 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of IL1A, a GAM336222 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336222 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336222 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of NGB, a GAM336222 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336222 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336222 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336222 is therefore inhibition of PRND, a GAM336222 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336223 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336223 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336223 is therefore inhibition of APPBP2, a GAM336223 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336223 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336223 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of BACE2, a GAM336223 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336223 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336223 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of BCHE. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336223 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336223 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of CTSB. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336223 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336223 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of CTSK. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336223 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336223 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of FHL2, a GAM336223 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336223 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336223 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of HD. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336223 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336223 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of IGF1, a GAM336223 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336223 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336223 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of IL1A, a GAM336223 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336223 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336223 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of NGB, a GAM336223 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336223 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336223 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336223 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336223 is therefore inhibition of PRND, a GAM336223 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336223 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336224 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336224 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336224 is therefore inhibition of APPBP2, a GAM336224 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336224 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336224 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of BACE2, a GAM336224 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336224 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336224 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of BCHE. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336224 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147780.1) is another GAM336224 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of CTSB. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336224 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336224 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of CTSK. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336224 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336224 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of FHL2, a GAM336224 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336224 HD A A TGGGCAA CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336224 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of HD. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336224 IGF1 A A TGGGCAA CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336224 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of IGF1, a GAM336224 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336224 IL1A A A TGGGCAA CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336224 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of IL1A, a GAM336224 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336224 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336224 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of NGB, a GAM336224 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336224 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336224 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336224 is therefore inhibition of PRND, a GAM336224 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336225 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336225 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336225 is therefore inhibition of APPBP2, a GAM336225 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336225 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336225 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of BACE2, a GAM336225 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336225 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336225 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of BCHE. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336225 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336225 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of CTSB. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336225 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336225 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of CTSK. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336225 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336225 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of FHL2, a GAM336225 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336225 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336225 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of HD. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336225 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336225 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of IGF1, a GAM336225 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336225 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336225 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of IL1A, a GAM336225 target gene which stimulates thymocyte

proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336225 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336225 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of NGB, a GAM336225 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336225 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336225 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336225 is therefore inhibition of PRND, a GAM336225 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336226 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336226 target gene. APPBP2 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336226 is therefore inhibition of APPBP2, a GAM336226 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336226 BACE2 CACTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336226 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of BACE2, a GAM336226 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336226 BCHE CACTGCACTCCAGCC A A TGGGCAA BCHE (Accession NM_000055.1) is another GAM336226 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of BCHE. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336226 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336226 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of CTSB. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336226 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336226 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of CTSK. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336226 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336226 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of FHL2, a GAM336226 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336226 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336226 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of HD. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336226 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336226 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of IGF1, a GAM336226 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336226 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336226 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of IL1A, a GAM336226 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336226 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336226 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of NGB, a GAM336226 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336226 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336226 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336226 is therefore inhibition of PRND, a GAM336226 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336227 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336227 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336227 is therefore inhibition of APPBP2, a GAM336227 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336227 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336227 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of BACE2, a GAM336227 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336227 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336227 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of BCHE. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336227 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336227 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of CTSB. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336227 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336227 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of CTSK. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336227 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336227 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of FHL2, a GAM336227 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336227 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336227 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of HD. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336227 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336227 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of IGF1, a GAM336227 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336227 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336227 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of IL1A, a GAM336227 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336227 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336227 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of NGB, a GAM336227 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336227 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336227 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336227 is therefore inhibition of PRND, a GAM336227 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336228 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336228 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336228 is therefore inhibition of APPBP2, a GAM336228 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336228 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336228 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A TGGGCAA

Another function of GAM336228 is therefore inhibition of BACE2, a GAM336228 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336228 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336228 target gene. A A TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of BCHE. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336228 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336228 target gene. A A TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of CTSB. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336228 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336228 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of CTSK. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336228 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336228 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of FHL2, a GAM336228 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336228 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336228 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of HD. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HD.

GAM336228 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336228 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of IGF1, a GAM336228 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336228 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336228 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of IL1A, a GAM336228 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336228 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336228 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336228 is therefore inhibition of NGB, a GAM336228 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336228 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336228 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336228 is therefore inhibition of PRND, a GAM336228 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336229 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336229 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336229 is therefore inhibition of APPBP2, a GAM336229 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336229 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336229 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of BACE2, a GAM336229 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336229 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336229 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of BCHE. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336229 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336229 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of CTSB. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336229 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336229 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of CTSK. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336229 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336229 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of FHL2, a GAM336229 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336229 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336229 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of HD. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336229 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336229 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of IGF1, a GAM336229 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336229 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336229 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of IL1A, a GAM336229 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336229 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336229 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of NGB, a GAM336229 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336229 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336229 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336229 is therefore inhibition of PRND, a GAM336229 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336230 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336230 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336230 is therefore inhibition of APPBP2, a GAM336230 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336230 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336230 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of BACE2, a GAM336230 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336230 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336230 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of BCHE. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336230 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336230 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of CTSB. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336230 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336230 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of CTSK. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336230 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336230 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of FHL2, a GAM336230 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336230 HD HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336230 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of HD. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336230 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336230 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of IGF1, a GAM336230 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336230 IL1A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A GAM336230 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of IL1A, a GAM336230 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336230 NGB CACTGCACTCCAGCC TGGGCAA Neuroglobin (NGB, Accession NM_021257.2) is another GAM336230 A A target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of NGB, a GAM336230 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336230 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336230 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336230 is therefore inhibition of PRND, a GAM336230 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336231 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336231 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336231 is therefore inhibition of APPBP2, a GAM336231 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336231 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336231 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of BACE2, a GAM336231 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336231 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336231 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of BCHE. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336231 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336231 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of CTSB. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336231 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336231 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of CTSK. Accordingly, utilities of GAM336231 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336231 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336231 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of FHL2, a GAM336231 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336231 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336231 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of HD. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336231 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336231 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of IGF1, a GAM336231 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336231 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336231 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of IL1A, a GAM336231 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336231 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336231 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of NGB, a GAM336231 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336231 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336231 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336231 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336231 is therefore inhibition of PRND, a GAM336231 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336231 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336232 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336232 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336232 is therefore inhibition of APPBP2, a GAM336232 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336232 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336232 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of BACE2, a GAM336232 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336232 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336232 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of BCHE. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336232 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336232 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of CTSB. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336232 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336232 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of CTSK. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336232 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336232 target gene. FHL2 BINDING SITE1 and FHL2 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of FHL2, a GAM336232 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336232 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336232 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of HD. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336232 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336232 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of IGF1, a GAM336232 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM336232 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336232 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of IL1A, a GAM336232 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336232 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336232 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of NGB, a GAM336232 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336232 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336232 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336232 is therefore inhibition of PRND, a GAM336232 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336233 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336233 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336233 is therefore inhibition of APPBP2, a GAM336233 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336233 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336233 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of BACE2, a GAM336233 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336233 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336233 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of BCHE. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336233 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336233 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of CTSB. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336233 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336233 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of CTSK. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336233 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336233 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336233 is therefore inhibition of FHL2, a GAM336233 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336233 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336233 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of HD. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336233 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336233 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of IGF1, a GAM336233 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336233 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336233 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of IL1A, a GAM336233 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336233 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336233 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of NGB, a GAM336233 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336233 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336233 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336233 is therefore inhibition of PRND, a GAM336233 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336234 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336234 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336234 is therefore inhibition of APPBP2, a GAM336234 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336234 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336234 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of BACE2, a GAM336234 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336234 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336234 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of BCHE. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336234 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336234 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of CTSB. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336234 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336234 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of CTSK. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336234 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336234 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of FHL2, a GAM336234 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336234 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336234 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of HD. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336234 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336234 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of IGF1, a GAM336234 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336234 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336234 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of IL1A, a GAM336234 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336234 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336234 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of NGB, a GAM336234 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336234 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336234 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336234 is therefore inhibition of PRND, a GAM336234 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336235 AVP TCTTGTGAAATCTGT AVP (Accession NM_000490.2) is a GAM336235 target gene. AVP A A

GGACCCT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336235 is therefore inhibition of AVP. Accordingly, utilities of GAM336235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336236 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336236 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336236 is therefore inhibition of APPBP2, a GAM336236 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336236 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336236 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of BACE2, a GAM336236 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM189.

GAM336236 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336236 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of BCHE. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336236 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336236 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of CTSB. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336236 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336236 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of CTSK. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336236 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336236 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of FHL2, a GAM336236 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336236 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336236 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of HD. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336236 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336236 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of IGF1, a GAM336236 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336236 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336236 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of IL1A, a GAM336236 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336236 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336236 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of NGB, a GAM336236 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336236 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336236 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336236 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336236 is therefore inhibition of PRND, a GAM336236 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336236 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336237 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336237 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336237 is therefore inhibition of APPBP2, a GAM336237 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336237 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336237 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of BACE2, a GAM336237 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336237 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336237 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of BCHE. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336237 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147780.1) is another GAM336237 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of CTSB. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336237 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336237 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of CTSK. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336237 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336237 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of FHL2, a GAM336237 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336237 HD A A TGGGCAA CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336237 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of HD. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336237 IGF1 A A TGGGCAA CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336237 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of IGF1, a GAM336237 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336237 IL1A A A TGGGCAA CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336237 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of IL1A, a GAM336237 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336237 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336237 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of NGB, a GAM336237 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336237 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336237 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336237 is therefore inhibition of PRND, a GAM336237 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336238 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336238 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336238 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336238 is therefore inhibition of APPBP2, a GAM336238 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336238 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336238 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336238 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336238 is therefore inhibition of BACE2, a GAM336238 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336238 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336238 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence A A

of GAM336238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336238 is therefore inhibition of FHL2, a GAM336238 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336238 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336238 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336238 is therefore inhibition of IGF1, a GAM336238 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336238 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336238 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336238 is therefore inhibition of MME, a GAM336238 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM25.

GAM336238 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336238 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336238 is therefore inhibition of PRND, a GAM336238 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336239 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336239 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336239 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336239 is therefore inhibition of APPBP2, a GAM336239 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336239 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336239 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336239 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336239 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336239 is therefore inhibition of BACE2, a GAM336239 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336239 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336239 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336239 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336239 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336239 is therefore inhibition of FHL2, a GAM336239 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336239 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336239 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336239 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336239 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336239 is therefore inhibition of HD. Accordingly, utilities of GAM336239 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336239 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336239 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336239 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336239 is therefore inhibition of IGF1, a GAM336239 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336239 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336239 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336239 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336239 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336239 is therefore inhibition of PRND, a GAM336239 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336239 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336240 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336240 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336240 is therefore inhibition of APPBP2, a GAM336240 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336240 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336240 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of BACE2, a GAM336240 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336240 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336240 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of BCHE. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336240 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336240 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of CTSB. Accordingly, utilities of GAM336240 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336240 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336240 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of CTSK. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336240 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336240 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of FHL2, a GAM336240 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336240 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336240 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of HD. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336240 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336240 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of IGF1, a GAM336240 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336240 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336240 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of IL1A, a GAM336240 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336240 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336240 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of

NGB, a GAM336240 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336240 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336240 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336240 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336240 is therefore inhibition of PRND, a GAM336240 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336240 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336241 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336241 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336241 is therefore inhibition of APPBP2, a GAM336241 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336241 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336241 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of BACE2, a GAM336241 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336241 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336241 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of BCHE. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336241 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336241 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of CTSB. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336241 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336241 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of CTSK. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336241 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336241 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of FHL2, a GAM336241 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336241 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336241 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of HD. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336241 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336241 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of IGF1, a GAM336241 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336241 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336241 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of IL1A, a GAM336241 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336241 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336241 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of NGB, a GAM336241 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336241 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336241 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336241 is therefore inhibition of PRND, a GAM336241 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336242 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336242 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336242 is therefore inhibition of APPBP2, a GAM336242 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336242 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336242 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of BACE2, a GAM336242 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336242 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336242 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of BCHE. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336242 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336242 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of CTSB. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336242 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336242 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of CTSK. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336242 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336242 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of FHL2, a GAM336242 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336242 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336242 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of HD. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336242 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336242 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of

IGF1, a GAM336242 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336242 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336242 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of IL1A, a GAM336242 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336242 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336242 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of NGB, a GAM336242 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336242 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336242 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336242 is therefore inhibition of PRND, a GAM336242 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336243 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336243 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336243 is therefore inhibition of APPBP2, a GAM336243 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336243 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336243 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of BACE2, a GAM336243 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336243 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336243 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of BCHE. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336243 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336243 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of CTSB. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336243 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336243 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of CTSK. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336243 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336243 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of FHL2, a GAM336243 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336243 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336243 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of HD. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336243 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336243 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of IGF1, a GAM336243 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336243 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336243 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of IL1A, a GAM336243 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336243 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336243 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of NGB, a GAM336243 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336243 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336243 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336243 is therefore inhibition of PRND, a GAM336243 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336244 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336244 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336244 is therefore inhibition of APPBP2, a GAM336244 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336244 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336244 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of BACE2, a GAM336244 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336244 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336244 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of BCHE. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336244 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336244 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of CTSB. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336244 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336244 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of CTSK. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336244 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336244 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of FHL2, a GAM336244 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336244 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336244 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of HD. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336244 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336244 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of IGF1, a GAM336244 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336244 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336244 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of IL1A, a GAM336244 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336244 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336244 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of NGB, a GAM336244 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336244 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336244 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336244 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336244 is therefore inhibition of PRND, a GAM336244 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336244 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336245 APPBP2 ATGGGAGACTGAGGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GCGGACG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336245 target gene. APPBP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336245 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336245 is therefore inhibition of APPBP2, a GAM336245 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336245 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336245 BACE2 ATGGGAGACTGAGGG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GCGGACG NM_138992.1) is another GAM336245 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336245 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336245 is therefore inhibition of BACE2, a GAM336245 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336245 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336245 HD ATGGGAGACTGAGGG HD (Accession NM_002111.3) is another GAM336245 target gene. HD A A

GCGGACG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336245 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336245 is therefore inhibition of HD. Accordingly, utilities of GAM336245 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336246 NGB TGGGATGATGTTAAA Neuroglobin (NGB, Accession NM_021257.2) is a GAM336246 target A A
CGTACTC gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336246 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336246 is therefore inhibition of NGB, a GAM336246 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336246 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336247 APPBP2 ACCCGAGAGGTGGAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GTTGCAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336247 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336247 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336247 is therefore inhibition of APPBP2, a GAM336247 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336247 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336247 IGF1 ACCCGAGAGGTGGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GTTGCAG NM_000618.2) is another GAM336247 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336247 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336247 is therefore inhibition of IGF1, a GAM336247 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336247 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336251 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336251 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336251 is therefore inhibition of APPBP2, a GAM336251 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336251 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336251 target gene. A A

TGGGCGA CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336251 is therefore inhibition of CTSB. Accordingly, utilities of GAM336251 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336251 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336251 target gene. A A

TGGGCGA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336251 is therefore inhibition of CTSK. Accordingly, utilities of GAM336251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336251 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCGA another GAM336251 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336251 is therefore inhibition of FHL2, a GAM336251 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336251 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCGA NM_000618.2) is another GAM336251 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336251 is therefore inhibition of IGF1, a GAM336251 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336251 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336251 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCGA another GAM336251 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336251 is therefore inhibition of PRND, a GAM336251 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336252 GLUL GGTTCAATTCACCGG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

AGTCTCA NM_002065.3) is a GAM336252 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336252 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336252 is therefore inhibition of GLUL, a GAM336252 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336252 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336252 IGF1 GGTTCAATTCACCGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AGTCTCA NM_000618.2) is another GAM336252 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336252 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336252 is therefore inhibition of IGF1, a GAM336252 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336252 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336255 APPBP2 TTCATTAGGCCAGGT GCGGTGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336255 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336255 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336255 is therefore inhibition of APPBP2, a GAM336255 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336256 APPBP2 TTCATTAGGCCAGGT GCGGTGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336256 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336256 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336256 is therefore inhibition of APPBP2, a GAM336256 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336256 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM336257 CLU GTCTGGAGGCTGGAA CCTGGTG — Clusterin (complement lysis inhibitor, SP- 40,40, sulfated glycoprotein (CLU, Accession NM_001831.1) is a GAM336257 target gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336257 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336257 is therefore inhibition of CLU, a GAM336257 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336257 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM336257 OLR1 GTCTGGAGGCTGGAA CCTGGTG — Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM336257 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336257 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336257 is therefore inhibition of OLR1, a GAM336257 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336257 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336259 ACE GAGCAGGTTTGGAAT GGCTCCA — Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM336259 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336259 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336259 is therefore inhibition of ACE, a GAM336259 target gene which Angiotensin I- converting enzyme

(dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336259 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336259 B2M GAGCAGGTTTGGAAT Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another A A

GGCTCCA GAM336259 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336259 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336259 is therefore inhibition of B2M, a GAM336259 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336259 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM336259 DSCR1 GAGCAGGTTTGGAAT Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

GGCTCCA NM_004414.3) is another GAM336259 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336259 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336259 is therefore inhibition of DSCR1, a GAM336259 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336259 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM336259 IGF1 GAGCAGGTTTGGAAT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGCTCCA NM_000618.2) is another GAM336259 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336259 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336259 is therefore inhibition of IGF1, a GAM336259 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336259 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336260 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336260 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336260 is therefore inhibition of APPBP2, a GAM336260 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336260 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336260 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336260 is therefore inhibition of BACE2, a GAM336260 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336260

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336260 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336260 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336260 is therefore inhibition of FHL2, a GAM336260 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336260 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336260 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336260 is therefore inhibition of HD. Accordingly, utilities of GAM336260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336260 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336260 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336260 is therefore inhibition of

IGF1, a GAM336260 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336260 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336260 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336260 is therefore inhibition of PRND, a GAM336260 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336261 GFAP GATGGCAGCTGGAGG GFAP (Accession NM_002055.2) is a GAM336261 target gene. GFAP A A

TGGAGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336261 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336261 is therefore inhibition of GFAP. Accordingly, utilities of GAM336261 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336261 HD GATGGCAGCTGGAGG HD (Accession NM_002111.3) is another GAM336261 target gene. HD A A

TGGAGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336261 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336261 is therefore inhibition of HD. Accordingly, utilities of GAM336261 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336261 MAPT GATGGCAGCTGGAGG TGGAGCA A A

Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM336261 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336261 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336261 is therefore inhibition of MAPT, a GAM336261 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336261 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336261 MT3 GATGGCAGCTGGAGG TGGAGCA A A

Metallothionein 3 (MT3, Accession NM_005954.1) is another GAM336261 target gene. MT3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MT3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336261 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336261 is therefore inhibition of MT3, a GAM336261 target gene which inhibits survival and neurite formation of cortical neurons in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336261 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MT3.The function of MT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3890.

GAM336264 DHCR24 CTGCCCTGAACTCTG GCCATCC A A

24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM336264 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336264 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336264 is therefore inhibition of DHCR24, a GAM336264 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336264 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336267 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGCGACA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336267 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336267 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336267 is therefore inhibition of APPBP2, a GAM336267 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336267 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336267 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGCGACA another GAM336267 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336267 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336267 is therefore inhibition of FHL2, a GAM336267 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336267 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336267 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGCGACA NM_000618.2) is another GAM336267 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336267 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336267 is therefore inhibition of IGF1, a GAM336267 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336267 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336267 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGCGACA another GAM336267 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336267 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336267 is therefore inhibition of PRND, a GAM336267 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336267 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336270 APBB2 TCTCTAAGACAAAGG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

AGAAGTC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336270 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336270 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336270 is therefore inhibition of APBB2, a GAM336270 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336270 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336271 HD AAGGCTTTTCTGGGA HD (Accession NM_002111.3) is a GAM336271 target gene. HD A A

AGAGCTG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336271 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336271 is therefore inhibition of HD. Accordingly, utilities of GAM336271 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336272 APBA2 CAGAATCTTTTGTCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

CTGAGAA 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM336272 target gene. APBA2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336272 is therefore inhibition of APBA2, a GAM336272 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336272 HTR2A CAGAATCTTTTGTCT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

CTGAGAA NM_000621.1) is another GAM336272 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336272 is therefore inhibition of HTR2A, a GAM336272 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336272 IGF1 CAGAATCTTTTGTCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CTGAGAA NM_000618.2) is another GAM336272 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336272 is therefore inhibition of IGF1, a GAM336272 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336272 PSEN2 CAGAATCTTTTGTCT PSEN2 (Accession NM_012486.1) is another GAM336272 target gene. A A

CTGAGAA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336272 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336275 PSEN1 TAACTGGCCTTGGAA PSEN1 (Accession NM_007318.1) is a GAM336275 target gene. PSEN1 A A

CCTGTAG BINDING SITE is a target binding site found in the 3` untranslated

region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336275 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336275 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336275 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336279 CNTF GTAACAAAATGAATA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A
ATACCTG GAM336279 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336279 is therefore inhibition of CNTF, a GAM336279 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336279 DSCR1 GTAACAAAATGAATA Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A
ATACCTG NM_004414.3) is another GAM336279 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336279 is therefore inhibition of DSCR1, a GAM336279 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM336279 HD GTAACAAAATGAATA HD (Accession NM_002111.3) is another GAM336279 target gene. HD A A

ATACCTG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336279 is therefore inhibition of HD. Accordingly, utilities of GAM336279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336279 MME GTAACAAAATGAATA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

ATACCTG enkephalinase, (MME, Accession NM_007289.1) is another GAM336279 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336279 is therefore inhibition of MME, a GAM336279 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336281 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336281 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336281 is therefore inhibition of APP. Accordingly, utilities of GAM336281 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336282 ACE TTGCTCAGGCTGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TGCAGTG (ACE, Accession NM_152831.1) is a GAM336282 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE,

and secondary structure complementarity to the nucleotide sequence of GAM336282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336282 is therefore inhibition of ACE, a GAM336282 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336282 ACT TTGCTCAGGCTGGAG Activator of CAMP- responsive Element Modulator (CR (ACT, A A
TGCAGTG Accession NM_020482.3) is another GAM336282 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336282 is therefore inhibition of ACT, a GAM336282 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336282 ADAM17 TTGCTCAGGCTGGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TGCAGTG factor, (ADAM17, Accession NM_021832.1) is another GAM336282 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336282 is therefore inhibition of ADAM17, a GAM336282 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM317.

GAM336282 IAPP TTGCTCAGGCTGGAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

TGCAGTG another GAM336282 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336282 is therefore inhibition of IAPP, a GAM336282 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336282 TGFB1 TTGCTCAGGCTGGAG TGFB1 (Accession NM_000660.1) is another GAM336282 target gene. A A

TGCAGTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336282 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336283 ACE TTGCTCAGGCTGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TGCAGTG (ACE, Accession NM_152831.1) is a GAM336283 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336283 is therefore inhibition of ACE, a GAM336283 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336283 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336283 ACT TTGCTCAGGCTGGAG A Activator of CAMP- responsive Element Modulator (CR (ACT, A A TGCAGTG Accession NM_020482.3) is another GAM336283 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336283 is therefore inhibition of ACT, a GAM336283 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336283 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336283 ADAM17 TTGCTCAGGCTGGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A TGCAGTG factor, (ADAM17, Accession NM_021832.1) is another GAM336283 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336283 is therefore inhibition of ADAM17, a GAM336283 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336283 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336283 IAPP TTGCTCAGGCTGGAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A TGCAGTG another GAM336283 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336283 is therefore inhibition of IAPP, a GAM336283 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336283 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336283 TGFB1 TTGCTCAGGCTGGAG TGFB1 (Accession NM_000660.1) is another GAM336283 target gene. A A

TGCAGTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336283 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336283 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336284 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336284 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336284 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336284 is therefore inhibition of APP. Accordingly, utilities of GAM336284 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336285 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336285 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336285 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336285 is therefore inhibition of APP.

Accordingly, utilities of GAM336285 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336289 FHL2 GGAATGGATGGAAGT A A GTGTGAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM336289 target gene. FHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336289 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336289 is therefore inhibition of FHL2, a GAM336289 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336289 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336289 HTR2C GGAATGGATGGAAGT A A GTGTGAG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM336289 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336289 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336289 is therefore inhibition of HTR2C, a GAM336289 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336289 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336290 FHL2 GGAATGGATGGAAGT A A GTGTGAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM336290 target gene. FHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336290 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336290 is therefore inhibition of FHL2, a GAM336290 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336290 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336290 HTR2C GGAATGGATGGAAGT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
GTGTGAG NM_000868.1) is another GAM336290 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336290 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336290 is therefore inhibition of HTR2C, a GAM336290 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336290 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336291 ACE TCCAGTGATTCTCGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
GGGCAGA (ACE, Accession NM_152831.1) is a GAM336291 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336291 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336291 is therefore inhibition of ACE, a GAM336291 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336291 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336292 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336292 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336292 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336292 is therefore inhibition of APP. Accordingly, utilities of GAM336292 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336293 DLST CAGGTGGTGCTGTTA Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

AGAAGCA oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336293 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336293 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336293 is therefore inhibition of DLST, a GAM336293 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336293 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336293 HTR2A CAGGTGGTGCTGTTA 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

AGAAGCA NM_000621.1) is another GAM336293 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336293 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336293 is therefore inhibition of HTR2A, a GAM336293 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336293 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336294 APBA2 GAGATGGAGTTTTAC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
TATGTTG 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM336294 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336294 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336294 is therefore inhibition of APBA2, a GAM336294 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336294 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336294 IGF1 GAGATGGAGTTTTAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TATGTTG NM_000618.2) is another GAM336294 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336294 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336294 is therefore inhibition of IGF1, a GAM336294 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336294 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336294 TGFB1 GAGATGGAGTTTTAC TGFB1 (Accession NM_000660.1) is another GAM336294 target gene. A A
TATGTTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336294 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336294 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336294 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336297 DLST ACAACCTCTGCCTCC TGGGTTC Dihydrolipoamide S- succinyltransferase (E2 component of 2-oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336297 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336297 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336297 is therefore inhibition of DLST, a GAM336297 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336297 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336297 IAPP ACAACCTCTGCCTCC TGGGTTC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM336297 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336297 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336297 is therefore inhibition of IAPP, a GAM336297 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336297 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336297 MTNR1A ACAACCTCTGCCTCC TGGGTTC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM336297 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide A A

sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336297 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336297 is therefore inhibition of MTNR1A, a GAM336297 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336297 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336298 DLST ACAACCTCTGCCTCC TGGGTTC A A Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336298 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336298 is therefore inhibition of DLST, a GAM336298 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336298 IAPP ACAACCTCTGCCTCC TGGGTTC A A Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM336298 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336298 is therefore inhibition of IAPP, a GAM336298 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336298 MTNR1A ACAACCTCTGCCTCC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

TGGGTTC another GAM336298 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336298 is therefore inhibition of MTNR1A, a GAM336298 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336299 THOP1 GGTCCAGACTGGAGT Thimet Oligopeptidase 1 (THOP1, Accession NM_003249.2) is a A A

ATAGTGC GAM336299 target gene. THOP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by THOP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of THOP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336299 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336299 is therefore inhibition of THOP1, a GAM336299 target gene which involves in the metabolism of neuropeptide and in cytoplasmic peptide degradation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336299 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with THOP1.The function of THOP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM520.

GAM336300 THOP1 GGTCCAGACTGGAGT Thimet Oligopeptidase 1 (THOP1, Accession NM_003249.2) is a A A

ATAGTGC GAM336300 target gene. THOP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by THOP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of THOP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336300 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336300 is therefore inhibition of THOP1, a GAM336300 target gene which involves in the metabolism of neuropeptide and in cytoplasmic peptide degradation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336300 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with THOP1.The function of THOP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM520.

GAM336303 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336303 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336303 is therefore inhibition of APPBP2, a GAM336303 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336303 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336303 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336303 is therefore inhibition of BACE2, a GAM336303 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336303 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336303 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336303 is therefore inhibition of FHL2, a GAM336303 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336303 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336303 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336303 is therefore inhibition of IGF1, a GAM336303 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336303 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336303 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336303 is therefore inhibition of MME, a GAM336303 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336303 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM336303 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336303 is therefore inhibition of PRND, a GAM336303 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336304 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is a GAM336304 target gene. CTSB A A TAGGCAA BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336304 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336304 is therefore inhibition of CTSB. Accordingly, utilities of GAM336304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336304 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A TAGGCAA another GAM336304 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336304 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336304 is therefore inhibition of FHL2, a GAM336304 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336304 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TAGGCAA NM_000618.2) is another GAM336304 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336304 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336304 is therefore inhibition of IGF1, a GAM336304 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336304 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
TAGGCAA another GAM336304 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336304 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336304 is therefore inhibition of PRND, a GAM336304 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336306 APPBP2 TTCCAGTAGTTACTC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
CTCCCTG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336306 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336306 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336306 is therefore inhibition of APPBP2, a GAM336306 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336306 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336307 APPBP2 TTCCAGTAGTTACTC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
CTCCCTG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336307 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336307 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336307 is therefore inhibition of APPBP2, a GAM336307 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336307 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336308 APPBP2 AGCAGCACAGAAATA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TTGGCAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336308 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336308 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336308 is therefore inhibition of APPBP2,

a GAM336308 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336308 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336308 NCKAP1 AGCAGCACAGAAATA A A TTGGCAC NCKAP1 (Accession NM_013436.2) is another GAM336308 target gene. NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336308 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336308 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM336308 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM336309 ACHE CTGGAAGACATGGTA A A GAGCTGA Acetylcholinesterase (YT blood group) (ACHE, Accession NM_015831.1) is a GAM336309 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336309 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336309 is therefore inhibition of ACHE, a GAM336309 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336309 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM336309 DLST CTGGAAGACATGGTA A A GAGCTGA Dihydrolipoamide S- succinyltransferase (E2 component of 2-oxo- glutarat (DLST, Accession NM_001933.2) is another GAM336309 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336309 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336309 is therefore inhibition of DLST, a GAM336309 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336309 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336309 IGF1 CTGGAAGACATGGTA A A GAGCTGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336309 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336309 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336309 is therefore inhibition of IGF1, a GAM336309 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336309 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336309 RAGE CTGGAAGACATGGTA A A GAGCTGA Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another GAM336309 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336309 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336309 is therefore inhibition of RAGE, a GAM336309 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM336309 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM1523.

GAM336311 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336311 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336311 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336311 is therefore inhibition of APPBP2, a GAM336311 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336311 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336311 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336311 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336311 is therefore inhibition of BACE2, a GAM336311 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336311 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336311 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence A A

of GAM336311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336311 is therefore inhibition of FHL2, a GAM336311 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336311 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A GGGCAAC NM_000618.2) is another GAM336311 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336311 is therefore inhibition of IGF1, a GAM336311 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336311 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336311 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336311 is therefore inhibition of MME, a GAM336311 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM25.

GAM336311 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336311 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336311 is therefore inhibition of PRND, a GAM336311 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336313 APLP1 CCACTGCACTCCAGC Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession A A

CTGGGTG NM_005166.2) is a GAM336313 target gene. APLP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336313 is therefore inhibition of APLP1, a GAM336313 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336313 APPBP2 CCACTGCACTCCAGC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CTGGGTG Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336313 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336313 is therefore inhibition of

APPBP2, a GAM336313 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336313 CRAT CCACTGCACTCCAGC Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is A A

CTGGGTG another GAM336313 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336313 is therefore inhibition of CRAT, a GAM336313 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336313 CTSB CCACTGCACTCCAGC CTSB (Accession NM_147782.1) is another GAM336313 target gene. A A

CTGGGTG CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336313 is therefore inhibition of CTSB. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336313 FHL2 CCACTGCACTCCAGC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CTGGGTG another GAM336313 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336313 is therefore inhibition of FHL2, a GAM336313 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336313 IGF1 CCACTGCACTCCAGC CTGGGTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336313 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336313 is therefore inhibition of IGF1, a GAM336313 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336313 PRND CCACTGCACTCCAGC CTGGGTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336313 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336313 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336313 is therefore inhibition of PRND, a GAM336313 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336315 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336315 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336315 is therefore inhibition of APPBP2, a GAM336315 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336315 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336315 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336315 is therefore inhibition of BACE2, a GAM336315 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336315 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336315 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336315 is therefore inhibition of FHL2, a GAM336315 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336315 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336315 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336315 is therefore inhibition of IGF1, a GAM336315 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336315 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336315 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336315 is therefore inhibition of MME, a GAM336315 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336315 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336315 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336315 is therefore inhibition of PRND, a GAM336315 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336316 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336316 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336316 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336316 is therefore inhibition of APPBP2, a GAM336316 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336316 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336316 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336316 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336316 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336316 is therefore inhibition of

BACE2, a GAM336316 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336316 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336316 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336316 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336316 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336316 is therefore inhibition of FHL2, a GAM336316 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336316 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336316 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336316 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336316 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336316 is therefore inhibition of IGF1, a GAM336316 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336316 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336316 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336316 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336316 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336316 is therefore inhibition of MME, a GAM336316 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336316 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336316 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336316 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336316 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336316 is therefore inhibition of PRND, a GAM336316 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336316 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336317 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336317 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336317 is therefore inhibition of APPBP2, a GAM336317 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336317 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336317 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336317 is therefore inhibition of BACE2, a GAM336317 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336317 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336317 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336317 is therefore inhibition of FHL2, a GAM336317 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336317 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336317 target gene. IGF1 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336317 is therefore inhibition of IGF1, a GAM336317 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336317 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336317 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336317 is therefore inhibition of MME, a GAM336317 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336317 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336317 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336317 is therefore inhibition of PRND, a GAM336317 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336318 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336318 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336318 is therefore inhibition of APPBP2, a GAM336318 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336318 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336318 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336318 is therefore inhibition of BACE2, a GAM336318 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336318 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336318 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336318 is therefore inhibition of FHL2, a GAM336318 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336318 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336318 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336318 is therefore inhibition of IGF1, a GAM336318 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336318 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336318 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336318 is therefore inhibition of MME, a GAM336318 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM336318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336318 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336318 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336318 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336318 is therefore inhibition of PRND, a GAM336318 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336320 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336320 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336320 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336320 is therefore inhibition of APPBP2, a GAM336320 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336320 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336320 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a A A

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336320 is therefore inhibition of BACE2, a GAM336320 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336320 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336320 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336320 is therefore inhibition of FHL2, a GAM336320 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336320 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336320 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336320 is therefore inhibition of IGF1, a GAM336320 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336320 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336320 MME ACTGCACTCCAGCCT GGGCAAC A A

Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336320 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336320 is therefore inhibition of MME, a GAM336320 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336320 PRND ACTGCACTCCAGCCT GGGCAAC A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336320 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336320 is therefore inhibition of PRND, a GAM336320 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336321 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336321 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336321 is therefore inhibition of APPBP2, a GAM336321 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336321 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336321 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336321 is therefore inhibition of BACE2, a GAM336321 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336321 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336321 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336321 is therefore inhibition of FHL2, a GAM336321 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336321 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336321 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336321 is therefore inhibition of IGF1, a GAM336321 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336321 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336321 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336321 is therefore inhibition of MME, a GAM336321 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336321 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336321 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336321 is therefore inhibition of PRND, a GAM336321 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336322 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336322 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336322 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336322 is therefore inhibition of APP. Accordingly, utilities of GAM336322 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336323 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336323 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336323 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336323 is therefore inhibition of APPBP2, a GAM336323 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336323 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336323 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336323 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336323 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336323 is therefore inhibition of BACE2, a GAM336323 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336323 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336323 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336323 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336323 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336323 is therefore inhibition of FHL2, a GAM336323 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336323 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336323 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336323 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336323 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336323 is therefore inhibition of IGF1, a GAM336323 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336323 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336323 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336323 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336323 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336323 is therefore inhibition of MME, a GAM336323 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336323 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336323 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336323 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336323 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336323 is therefore inhibition of PRND, a GAM336323 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336323 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336324 BACE TCAGAGTGAGTCCCT Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A
GGGACTA is a GAM336324 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336324 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336324 is therefore inhibition of BACE, a GAM336324 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336325 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336325 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336325 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336325 is therefore inhibition of APPBP2, a GAM336325 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336325 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336325 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336325 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336325 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336325 is therefore inhibition of BACE2, a GAM336325 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336325 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336325 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336325 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336325 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336325 is therefore inhibition of FHL2, a GAM336325 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336325 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336325 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336325 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336325 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336325 is therefore inhibition of IGF1, a GAM336325 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336325 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336325 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336325 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336325 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336325 is therefore inhibition of MME, a GAM336325 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336325 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336325 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM336325 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336325 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336325 is therefore inhibition of PRND, a GAM336325 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336325 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336326 SNCA CTGGTCCCTGTGTCA SNCA (Accession NM_007308.1) is a GAM336326 target gene. SNCA A A GTCTTAA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336326 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336326 is therefore inhibition of SNCA. Accordingly, utilities of GAM336326 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM336329 MPO GCTCCCTTGTCTAGG Myeloperoxidase (MPO, Accession NM_000250.1) is a GAM336329 A A GCGTGGA target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336329 is therefore inhibition of MPO, a GAM336329 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM336330 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336330 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336330 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336330 is therefore inhibition of APP. Accordingly, utilities of GAM336330 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336331 FOS GTCACTGCAATCAAC V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A

AATACTC Accession NM_005252.2) is a GAM336331 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336331 is therefore inhibition of FOS, a GAM336331 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336332 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336332 target

gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336332 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336332 is therefore inhibition of APPBP2, a GAM336332 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336332 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336332 BACE2 ACTGCACTCCAGCCT A A GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336332 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336332 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336332 is therefore inhibition of BACE2, a GAM336332 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336332 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336332 FHL2 ACTGCACTCCAGCCT A A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336332 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336332 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336332 is therefore inhibition of

FHL2, a GAM336332 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336332 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336332 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM336332 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336332 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336332 is therefore inhibition of IGF1, a GAM336332 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336332 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336332 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336332 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336332 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336332 is therefore inhibition of MME, a GAM336332 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336332 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336332 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336332 target gene. PRND BINDING SITE1 through PRND

BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336332 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336332 is therefore inhibition of PRND, a GAM336332 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336332 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336334 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336334 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336334 is therefore inhibition of APPBP2, a GAM336334 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336334 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336334 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336334 is therefore inhibition of BACE2, a GAM336334 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM336334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336334 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336334 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336334 is therefore inhibition of FHL2, a GAM336334 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336334 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336334 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336334 is therefore inhibition of HD. Accordingly, utilities of GAM336334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336334 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336334 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336334 is therefore inhibition of IGF1, a GAM336334 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336334 PRND CATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336334 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336334 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336334 is therefore inhibition of PRND, a GAM336334 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336335 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336335 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336335 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336335 is therefore inhibition of APPBP2, a GAM336335 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336335 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336335 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336335 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336335 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336335 is therefore inhibition of BACE2, a GAM336335 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336335 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336335 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336335 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336335 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336335 is therefore inhibition of FHL2, a GAM336335 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336335 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336335 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336335 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336335 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336335 is therefore inhibition of HD. Accordingly, utilities of GAM336335 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HD.

GAM336335 IGF1 CATTGCACTCCAGCC TGGGCAA A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336335 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336335 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336335 is therefore inhibition of IGF1, a GAM336335 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336335 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336335 PRND CATTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336335 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336335 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336335 is therefore inhibition of PRND, a GAM336335 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336335 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336336 APPBP2 CATTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336336 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336336 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM336336 is therefore inhibition of APPBP2, a GAM336336 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336336 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336336 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336336 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336336 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336336 is therefore inhibition of BACE2, a GAM336336 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336336 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336336 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336336 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336336 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336336 is therefore inhibition of FHL2, a GAM336336 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336336 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336336 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336336 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336336 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336336 is therefore inhibition of HD. Accordingly, utilities of GAM336336 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336336 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336336 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336336 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336336 is therefore inhibition of IGF1, a GAM336336 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336336 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336336 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336336 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336336 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336336 is therefore inhibition of PRND, a GAM336336 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336336 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336337 APPBP2 CATTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336337 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336337 is therefore inhibition of APPBP2, a GAM336337 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336337 BACE2 CATTGCACTCCAGCC TGGGCAA A A

Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336337 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336337 is therefore inhibition of BACE2, a GAM336337 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336337 FHL2 CATTGCACTCCAGCC TGGGCAA A A

Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336337 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336337 is therefore inhibition of FHL2, a GAM336337 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336337 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336337 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336337 is therefore inhibition of HD. Accordingly, utilities of GAM336337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336337 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336337 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336337 is therefore inhibition of IGF1, a GAM336337 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336337 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336337 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336337 is therefore inhibition of PRND, a GAM336337 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336338 APBA1 AAACACAATGCAGTA Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGAAGAG 1 (X11) (APBA1, Accession NM_001163.2) is a GAM336338 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336338 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336338 is therefore inhibition of APBA1, a GAM336338 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336338 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336339 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336339 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336339 is therefore inhibition of APPBP2,

a GAM336339 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336339 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336339 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336339 is therefore inhibition of BACE2, a GAM336339 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336339 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336339 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336339 is therefore inhibition of FHL2, a GAM336339 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336339 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336339 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336339 is therefore inhibition of IGF1, a GAM336339 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336339 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336339 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336339 is therefore inhibition of MME, a GAM336339 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336339 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336339 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336339 is therefore inhibition of PRND, a GAM336339 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336340 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336340 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336340 is therefore inhibition of APPBP2, a GAM336340 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336340 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336340 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336340 is therefore inhibition of BACE2, a GAM336340 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336340 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336340 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336340 is therefore inhibition of FHL2, a GAM336340 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336340 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336340 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336340 is therefore inhibition of HD. Accordingly, utilities of GAM336340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336340 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336340 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336340 is therefore inhibition of IGF1, a GAM336340 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336340 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336340 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336340 is therefore inhibition of PRND, a GAM336340 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336341 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336341 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336341 is therefore inhibition of APPBP2, a GAM336341 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336341 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336341 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336341 is therefore inhibition of BACE2, a GAM336341 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336341 FHL2 A ACTGCACTCCAGCCT A Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336341 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

GGGCAAC

Another function of GAM336341 is therefore inhibition of FHL2, a GAM336341 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336341 IGF1 A ACTGCACTCCAGCCT A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336341 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

GGGCAAC

Another function of GAM336341 is therefore inhibition of IGF1, a GAM336341 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336341 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336341 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336341 is therefore inhibition of MME, a GAM336341 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336341 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336341 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336341 is therefore inhibition of PRND, a GAM336341 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336342 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336342 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336342 is therefore inhibition of APPBP2, a GAM336342 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336342 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336342 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336342 is therefore inhibition of BACE2, a GAM336342 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336342 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336342 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336342 is therefore inhibition of FHL2, a GAM336342 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336342 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336342 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336342 is therefore inhibition of IGF1, a GAM336342 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336342 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336342 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336342 is therefore inhibition of MME, a GAM336342 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336342 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336342 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336342 is therefore inhibition of PRND, a GAM336342 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336343 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336343 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336343 is therefore inhibition of APPBP2, a GAM336343 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336343 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336343 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336343 is therefore inhibition of BACE2, a GAM336343 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336343 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336343 target gene. FHL2 BINDING SITE1 and FHL2 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336343 is therefore inhibition of FHL2, a GAM336343 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336343 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336343 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336343 is therefore inhibition of IGF1, a GAM336343 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336343 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336343 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336343 is therefore inhibition of MME, a GAM336343 target gene which is thermolysin- like specificity.

and therefore is associated with Alzheimer. Accordingly, utilities of GAM336343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336343 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336343 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336343 is therefore inhibition of PRND, a GAM336343 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336344 APP CAGGTACTTTTTGGT APP (Accession NM_000484.1) is a GAM336344 target gene. APP A A

TTACATG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336344 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336344 is therefore inhibition of APP. Accordingly, utilities of GAM336344 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336344 TNFSF5 CAGGTACTTTTTGGT TNFSF5 (Accession NM_000074.1) is another GAM336344 target A A

TTACATG gene. TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336344 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336344 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM336344 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM336347 CHAT TCTGGCTCCTGAGTC Choline Acetyltransferase (CHAT, Accession NM_020549.2) is a A A
CTAGCTC GAM336347 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336347 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336347 is therefore inhibition of CHAT, a GAM336347 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336347 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336348 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336348 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336348 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336348 is therefore inhibition of APP. Accordingly, utilities of GAM336348 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336349 ACE TGACTTGTCTGGTTT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
GGCATCT (ACE, Accession NM_152831.1) is a GAM336349 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336349 is therefore inhibition of ACE, a GAM336349 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336350 ACT CTTGCACTCCACAGC Activator of CAMP- responsive Element Modulator (CR (ACT, A A

CTGGGTG Accession NM_020482.3) is a GAM336350 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336350 is therefore inhibition of ACT, a GAM336350 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336350 APPBP2 CTTGCACTCCACAGC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CTGGGTG Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336350 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336350 is therefore inhibition of APPBP2, a GAM336350 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336350 FHL2 CTTGCACTCCACAGC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CTGGGTG another GAM336350 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336350 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336350 is therefore inhibition of FHL2, a GAM336350 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336350 FOS A A CTTGCACTCCACAGC CTGGGTG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, Accession NM_005252.2) is another GAM336350 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336350 is therefore inhibition of FOS, a GAM336350 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336350 IGF1 A A CTTGCACTCCACAGC CTGGGTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336350 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336350 is therefore inhibition of IGF1, a GAM336350 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336350 PRND CTTGCACTCCACAGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

CTGGGTG another GAM336350 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336350 is therefore inhibition of PRND, a GAM336350 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336352 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336352 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336352 is therefore inhibition of APP. Accordingly, utilities of GAM336352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336353 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336353 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336353 is therefore inhibition of APPBP2, a GAM336353 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336353 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336353 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336353 is therefore inhibition of BACE2, a GAM336353 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336353 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336353 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336353 is therefore inhibition of FHL2, a GAM336353 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336353 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336353 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336353 is therefore inhibition of IGF1, a GAM336353 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336353 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336353 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336353 is therefore inhibition of MME, a GAM336353 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336353 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336353 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336353 is therefore inhibition of PRND, a GAM336353 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336354 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336354 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336354 is therefore inhibition of APPBP2, a GAM336354 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336354 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336354 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336354 is therefore inhibition of BACE2, a GAM336354 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336354 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336354 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336354 is therefore inhibition of FHL2, a GAM336354 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336354 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336354 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336354 is therefore inhibition of IGF1, a GAM336354 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336354 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336354 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336354 is therefore inhibition of MME, a GAM336354 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM25.

GAM336354 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336354 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336354 is therefore inhibition of PRND, a GAM336354 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336357 FLNB TTCCTTCTGCATTGT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
GAGAAAA NM_001457.1) is a GAM336357 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336357 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336357 is therefore inhibition of FLNB, a GAM336357 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336359 IGF1 AGTGAGCCGAGATAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
ATACATA NM_000618.2) is a GAM336359 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336359 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336359 is therefore inhibition of IGF1, a GAM336359 target gene which are structurally and functionally

related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336359 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336359 PRND AGTGAGCCGAGATAC ATACATA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336359 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336359 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336359 is therefore inhibition of PRND, a GAM336359 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336359 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336360 IGF1 AGTGAGCCGAGATAC ATACATA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM336360 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336360 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336360 is therefore inhibition of IGF1, a GAM336360 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336360 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336360 PRND AGTGAGCCGAGATAC ATACATA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336360 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences A A

of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336360 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336360 is therefore inhibition of PRND, a GAM336360 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336360 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336361 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336361 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336361 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336361 is therefore inhibition of APPBP2, a GAM336361 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336361 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336361 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336361 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336361 is therefore inhibition of BACE2, a GAM336361 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336361 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336361 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336361 is therefore inhibition of FHL2, a GAM336361 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336361 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336361 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336361 is therefore inhibition of IGF1, a GAM336361 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336361 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336361 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336361 is therefore inhibition of MME, a GAM336361 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336361 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM336361 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336361 is therefore inhibition of PRND, a GAM336361 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336362 MME TGATCACAGGCAAAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A GAATAAA enkephalinase, (MME, Accession NM_000902.2) is a GAM336362 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336362 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336362 is therefore inhibition of MME, a GAM336362 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336362 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336362 TGFB1 TGATCACAGGCAAAG TGFB1 (Accession NM_000660.1) is another GAM336362 target gene. A A

GAATAAA TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336362 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336362 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336362 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336363 CNTF CACCCTCTGCCTGTG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A

GTTGTCT GAM336363 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336363 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336363 is therefore inhibition of CNTF, a GAM336363 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336363 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336363 DHCR24 CACCCTCTGCCTGTG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GTTGTCT NM_014762.1) is another GAM336363 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336363 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336363 is therefore inhibition of DHCR24, a GAM336363 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336363 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM44.

GAM336364 APPBP2 ATTGCACTCCAGCCT GGGCAAT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336364 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336364 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336364 is therefore inhibition of APPBP2, a GAM336364 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336364 FHL2 ATTGCACTCCAGCCT GGGCAAT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336364 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336364 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336364 is therefore inhibition of FHL2, a GAM336364 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336364 IGF1 ATTGCACTCCAGCCT GGGCAAT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336364 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336364 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336364 is therefore inhibition of IGF1, a GAM336364 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336364 PRND ATTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAT another GAM336364 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336364 is therefore inhibition of PRND, a GAM336364 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336365 ADAM17 ACAGTGTTACCCAGG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
CTGGTCT factor, (ADAM17, Accession NM_003183.3) is a GAM336365 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336365 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336365 is therefore inhibition of ADAM17, a GAM336365 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336365 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336365 HTR2A ACAGTGTTACCCAGG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

CTGGTCT NM_000621.1) is another GAM336365 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336365 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336365 is therefore inhibition of HTR2A, a GAM336365 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336365 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336365 IAPP ACAGTGTTACCCAGG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

CTGGTCT another GAM336365 target gene. IAPP BINDING SITE1 and IAPP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IAPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE1 and IAPP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336365 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336365 is therefore inhibition of IAPP, a GAM336365 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336365 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336365 RAGE ACAGTGTTACCCAGG Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A

CTGGTCT GAM336365 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336365 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336365 is therefore inhibition of RAGE, a GAM336365 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore

is associated with Alzheimer. Accordingly, utilities of GAM336365 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM336365 TGFB1 ACAGTGTTACCCAGG TGFB1 (Accession NM_000660.1) is another GAM336365 target gene. A A

CTGGTCT TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336365 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336365 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336365 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336368 ACE AGGTGAGAAAACTGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GGCTCAG (ACE, Accession NM_152831.1) is a GAM336368 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336368 is therefore inhibition of ACE, a GAM336368 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336368 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336368 BACE AGGTGAGAAAACTGA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

GGCTCAG is another GAM336368 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336368 is therefore inhibition of BACE, a GAM336368 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336368 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336368 IGF1 AGGTGAGAAAACTGA A A GGCTCAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336368 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336368 is therefore inhibition of IGF1, a GAM336368 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336368 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336368 IL1A AGGTGAGAAAACTGA A A GGCTCAG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336368 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336368 is therefore inhibition of IL1A, a GAM336368 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336368 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336368 IL1B AGGTGAGAAAACTGA Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A

GGCTCAG GAM336368 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336368 is therefore inhibition of IL1B, a GAM336368 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336368 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM336368 MME AGGTGAGAAAACTGA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGCTCAG enkephalinase, (MME, Accession NM_007287.1) is another GAM336368 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336368 is therefore inhibition of MME, a GAM336368 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336368 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336369 GAL TAAGGACGCAAAGAG Galanin (GAL, Accession NM_015973.2) is a GAM336369 target A A

GGCAAGG gene. GAL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GAL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336369 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336369 is therefore inhibition of GAL, a GAM336369 target gene which stimulates LH secretion and enhances

LHRH- induced LH release from dispersed anterior pituitary cells in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336369 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GAL.The function of GAL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3293.

GAM336372 APPBP2 ATGGAGCTGTTTTCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TCAGAGC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336372 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336372 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336372 is therefore inhibition of APPBP2, a GAM336372 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336372 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336373 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336373 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336373 is therefore inhibition of APPBP2, a GAM336373 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336373 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM336373 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336373 is therefore inhibition of BACE2, a GAM336373 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336373 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336373 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336373 is therefore inhibition of FHL2, a GAM336373 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336373 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336373 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336373 is therefore inhibition of HD. Accordingly, utilities of GAM336373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336373 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336373 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336373 is therefore inhibition of IGF1, a GAM336373 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336373 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336373 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336373 is therefore inhibition of PRND, a GAM336373 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336374 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336374 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336374 is therefore inhibition of APPBP2, a GAM336374 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336374 BACE2 CATTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336374 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336374 is therefore inhibition of BACE2, a GAM336374 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336374 FHL2 CATTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336374 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336374 is therefore inhibition of FHL2, a GAM336374 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336374 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336374 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336374 is therefore inhibition of HD. Accordingly, utilities of GAM336374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336374 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336374 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336374 is therefore inhibition of IGF1, a GAM336374 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336374 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336374 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336374 is therefore inhibition of PRND, a GAM336374 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336375 CNTF TCCCGTGTGAAAATT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A

TGTATGC GAM336375 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336375 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336375 is therefore inhibition of CNTF, a GAM336375 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336376 ARHA TGAAGTAGTTAGGTT Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

GTAGCTC is a GAM336376 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336376 is therefore inhibition of ARHA, a GAM336376 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336377 ARHA TGAAGTAGTTAGGTT Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

GTAGCTC is a GAM336377 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336377 is therefore inhibition of ARHA, a GAM336377 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336378 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336378 target gene. APP
A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336378 is therefore inhibition of APP. Accordingly, utilities of GAM336378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336380 CRAT GAGGTGAAGATCTTG Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is a
A A

GAGTCTG GAM336380 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336380 is therefore inhibition of CRAT, a GAM336380 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336380 MAPK10 GAGGTGAAGATCTTG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A
A

GAGTCTG NM_138980.1) is another GAM336380 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336380 is therefore inhibition of MAPK10, a GAM336380 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336381 CRAT GAGGTGAAGATCTTG A A GAGTCTG Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is a GAM336381 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336381 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336381 is therefore inhibition of CRAT, a GAM336381 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336381 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336381 MAPK10 GAGGTGAAGATCTTG A A GAGTCTG Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138980.1) is another GAM336381 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336381 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336381 is therefore inhibition of MAPK10, a GAM336381 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336381 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10

and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336382 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTGAC a GAM336382 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336382 is therefore inhibition of FHL2, a GAM336382 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336382 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTGAC NM_000618.2) is another GAM336382 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336382 is therefore inhibition of IGF1, a GAM336382 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336382 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGTGAC another GAM336382 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336382 is therefore inhibition of PRND, a GAM336382 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336384 HD TCCCAGTCATCTGGG HD (Accession NM_002111.3) is a GAM336384 target gene. HD A A

ATGTGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336384 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336384 is therefore inhibition of HD. Accordingly, utilities of GAM336384 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336385 HD TCCCAGTCATCTGGG HD (Accession NM_002111.3) is a GAM336385 target gene. HD A A

ATGTGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336385 is therefore inhibition of HD. Accordingly, utilities of GAM336385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336386 ADAM10 AGAGCTAGGAAGATA A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A

CAGGGTT Accession NM_001110.1) is a GAM336386 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336386 is therefore inhibition of ADAM10, a GAM336386 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM336386 BAX AGAGCTAGGAAGATA BCL2- associated X Protein (BAX, Accession NM_004324.2) is A A CAGGGTT another GAM336386 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336386 is therefore inhibition of BAX, a GAM336386 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM336386 GLUL AGAGCTAGGAAGATA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A CAGGGTT NM_002065.3) is another GAM336386 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336386 is therefore inhibition of GLUL, a GAM336386 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336386 HD AGAGCTAGGAAGATA HD (Accession NM_002111.3) is another GAM336386 target gene. HD A A CAGGGTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336386 is therefore inhibition of HD. Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336386 MAPK10 AGAGCTAGGAAGATA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A
CAGGGTT NM_002753.2) is another GAM336386 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336386 is therefore inhibition of MAPK10, a GAM336386 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336386 MAPT AGAGCTAGGAAGATA Microtubule- associated Protein Tau (MAPT, Accession A A
CAGGGTT NM_016841.1) is another GAM336386 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336386 is therefore inhibition of MAPT, a GAM336386 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336386 TRPM2 AGAGCTAGGAAGATA TRPM2 (Accession NM_003307.1) is another GAM336386 target gene. A A
CAGGGTT TRPM2 BINDING SITE is a target binding site found in the 5`

untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336386 is therefore inhibition of TRPM2, a GAM336386 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336387 CTSB CACTGCACTGTAGCC CTSB (Accession NM_147782.1) is a GAM336387 target gene. CTSB A A
TCCTGGG BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336387 is therefore inhibition of CTSB. Accordingly, utilities of GAM336387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336387 FHL2 CACTGCACTGTAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TCCTGGG another GAM336387 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336387 is therefore inhibition of FHL2, a GAM336387 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336387 IAPP CACTGCACTGTAGCC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

TCCTGGG another GAM336387 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336387 is therefore inhibition of IAPP, a GAM336387 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336387 IGF1 CACTGCACTGTAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TCCTGGG NM_000618.2) is another GAM336387 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336387 is therefore inhibition of IGF1, a GAM336387 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336387 PRND CACTGCACTGTAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TCCTGGG another GAM336387 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336387 is therefore inhibition of PRND, a GAM336387 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336388 ACT TGGCAGGTAAGCCAC Activator of CAMP- responsive Element Modulator (CR (ACT, A A CAGCATC Accession NM_020482.3) is a GAM336388 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336388 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336388 is therefore inhibition of ACT, a GAM336388 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336388 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336389 ACT TGGCAGGTAAGCCAC Activator of CAMP- responsive Element Modulator (CR (ACT, A A CAGCATC Accession NM_020482.3) is a GAM336389 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336389 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336389 is therefore inhibition of ACT, a GAM336389 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336389 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336390 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336390 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336390 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336390 is therefore inhibition of APPBP2, a GAM336390 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336390 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336390 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336390 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336390 is therefore inhibition of BACE2, a GAM336390 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336390 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336390 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336390 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336390 is therefore inhibition of FHL2, a GAM336390 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336390 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336390 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336390 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336390 is therefore inhibition of IGF1, a GAM336390 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336390 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336390 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336390 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336390 is therefore inhibition of MME, a GAM336390 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336390 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336390 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING A A

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336390 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336390 is therefore inhibition of PRND, a GAM336390 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336391 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336391 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336391 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336391 is therefore inhibition of APPBP2, a GAM336391 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336391 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336391 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336391 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336391 is therefore inhibition of BACE2, a GAM336391 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336391 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336391 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336391 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336391 is therefore inhibition of FHL2, a GAM336391 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336391 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336391 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336391 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336391 is therefore inhibition of IGF1, a GAM336391 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336391 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336391 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336391 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336391 is therefore inhibition of MME, a GAM336391 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336391 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM336391 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336391 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336391 is therefore inhibition of PRND, a GAM336391 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336392 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336392 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336392 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336392 is therefore inhibition of APPBP2, a GAM336392 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336392 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336392 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336392 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336392 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336392 is therefore inhibition of BACE2, a GAM336392 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336392 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336392 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336392 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336392 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336392 is therefore inhibition of FHL2, a GAM336392 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336392 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336392 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336392 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336392 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336392 is therefore inhibition of IGF1, a GAM336392 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336392 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336392 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336392 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336392 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336392 is therefore inhibition of MME, a GAM336392 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336392 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336392 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336392 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336392 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336392 is therefore inhibition of PRND, a GAM336392 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336392 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336393 CLU GGAGCTGTAACAGAT CTGTTCT Clusterin (complement lysis inhibitor, SP- 40,40, sulfated glycoprotein (CLU, Accession NM_001831.1) is a GAM336393 target gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336393 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336393 is therefore inhibition of CLU, a GAM336393 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM336394 FLNB GTGTTTTTCCAAATG ACATCCA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is a GAM336394 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336394 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336394 is therefore inhibition of FLNB, a GAM336394 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336395 FLNB GTGTTTTTCCAAATG ACATCCA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is a GAM336395 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336395 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336395 is therefore inhibition of FLNB, a GAM336395 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336395 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336397 CAV1 GAGGAAGGTAATGAT CTTGATC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM336397 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336397 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336397 is therefore inhibition of CAV1, a GAM336397 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336397 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336399 ACE TAATGCTCAGCTGGA CCAGTGT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_000789.2) is a GAM336399 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336399 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336399 is therefore inhibition of ACE, a GAM336399 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336399 APPBP2 TAATGCTCAGCTGGA CCAGTGT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336399 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING A A

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336399 is therefore inhibition of APPBP2, a GAM336399 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336400 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336400 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336400 is therefore inhibition of APP. Accordingly, utilities of GAM336400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336403 HTR2C TTGCTTCATTAGGGC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

AAGCAAG NM_000868.1) is a GAM336403 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336403 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336403 is therefore inhibition of HTR2C, a GAM336403 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336403 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336404 IGF1 TATGAGTGTGATGGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GTTTGAG NM_000618.2) is a GAM336404 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336404 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336404 is therefore inhibition of IGF1, a GAM336404 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336404 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336404 PSEN1 TATGAGTGTGATGGT PSEN1 (Accession NM_000021.2) is another GAM336404 target gene. A A

GTTTGAG PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336404 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336404 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336404 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336405 MAPK10 TCTCACACTCTGATT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

TCTTGCT NM_138980.1) is a GAM336405 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336405 is therefore inhibition of MAPK10, a GAM336405 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336405 PRND TCTCACACTCTGATT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TCTTGCT another GAM336405 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336405 is therefore inhibition of PRND, a GAM336405 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336406 APBB2 CAGAGCATTTGTGAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAGTGTT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336406 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336406 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336406 is therefore inhibition of APBB2, a GAM336406 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336406 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336406 BACE2 CAGAGCATTTGTGAG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GAGTGTT NM_138991.1) is another GAM336406 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336406 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336406 is therefore inhibition of BACE2, a GAM336406 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM336406 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336407 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336407 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A GAM336407 target

A function of GAM336407 is therefore inhibition of APPBP2, a GAM336407 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336407 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336407 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336407 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336407 is therefore inhibition of BACE2, a GAM336407 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336407 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336407 target gene. FHL2 BINDING SITE1 and FHL2 BINDING A A

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336407 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336407 is therefore inhibition of FHL2, a GAM336407 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336407 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336407 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336407 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336407 is therefore inhibition of IGF1, a GAM336407 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336407 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336407 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336407 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336407 is therefore inhibition of MME, a GAM336407 target gene which is thermolysin- like specificity.

and therefore is associated with Alzheimer. Accordingly, utilities of GAM336407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336407 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336407 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336407 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336407 is therefore inhibition of PRND, a GAM336407 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336408 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336408 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336408 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336408 is therefore inhibition of APPBP2, a GAM336408 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336408 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336408 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336408 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336408 is therefore inhibition of BACE2, a GAM336408 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336408 FHL2 A ACTGCACTCCAGCCT A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336408 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336408 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336408 is therefore inhibition of FHL2, a GAM336408 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336408 IGF1 A ACTGCACTCCAGCCT A GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336408 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336408 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336408 is therefore inhibition of IGF1, a GAM336408 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336408 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336408 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336408 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336408 is therefore inhibition of MME, a GAM336408 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336408 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336408 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336408 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336408 is therefore inhibition of PRND, a GAM336408 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336409 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336409 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE A A

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336409 is therefore inhibition of APPBP2, a GAM336409 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336409 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336409 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336409 is therefore inhibition of BACE2, a GAM336409 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336409 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336409 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336409 is therefore inhibition of FHL2, a GAM336409 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336409 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336409 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336409 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336409 is therefore inhibition of IGF1, a GAM336409 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336409 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336409 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336409 is therefore inhibition of MME, a GAM336409 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336409 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336409 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336409 is therefore inhibition of PRND, a GAM336409 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336412 IAPP CTGCCTCCTGGGTTC AAGCAAT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a GAM336412 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336412 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336412 is therefore inhibition of IAPP, a GAM336412 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336412 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336413 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336413 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336413 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336413 is therefore inhibition of APPBP2, a GAM336413 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336413 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336413 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336413 is therefore inhibition of BACE2, a GAM336413 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336413 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336413 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336413 is therefore inhibition of FHL2, a GAM336413 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336413 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336413 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336413 is therefore inhibition of IGF1, a GAM336413 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336413 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336413 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336413 is therefore inhibition of MME, a GAM336413 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336413 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336413 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336413 is therefore inhibition of PRND, a GAM336413 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336414 CASP3 ATTGTAAATTAACAA TTTGCTC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is a GAM336414 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336414 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336414 is therefore inhibition of CASP3, a GAM336414 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336414 IAPP ATTGTAAATTAACAA TTTGCTC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM336414 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336414 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336414 is therefore inhibition of IAPP, a GAM336414 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336420 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM336420 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336420 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336420 is therefore inhibition of APP. Accordingly, utilities of GAM336420 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336422 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336422 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336422 is therefore inhibition of APPBP2, a GAM336422 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336422 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336422 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336422 is therefore inhibition of BACE2, a GAM336422 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336422 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336422 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336422 is therefore inhibition of FHL2, a GAM336422 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336422 HD A A TGGGCAA CATTGCACTCCAGCC

HD (Accession NM_002111.3) is another GAM336422 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336422 is therefore inhibition of HD. Accordingly, utilities of GAM336422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336422 IGF1 A A TGGGCAA CATTGCACTCCAGCC

Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336422 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336422 is therefore inhibition of IGF1, a GAM336422 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336422 PRND A A TGGGCAA CATTGCACTCCAGCC

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336422 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336422 is therefore inhibition of PRND, a GAM336422 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336424 GLUL AGGTGGGGTTTCACC Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
ATGTTGG NM_002065.3) is a GAM336424 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336424 is therefore inhibition of GLUL, a GAM336424 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336424 IAPP AGGTGGGGTTTCACC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
ATGTTGG another GAM336424 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336424 is therefore inhibition of IAPP, a GAM336424 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The

function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336424 PSEN1 AGGTGGGGTTTCACC PSEN1 (Accession NM_007318.1) is another GAM336424 target gene. A A

ATGTTGG PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336424 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336424 TRPM2 AGGTGGGGTTTCACC TRPM2 (Accession NM_003307.1) is another GAM336424 target gene. A A

ATGTTGG TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336424 is therefore inhibition of TRPM2, a GAM336424 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336426 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336426 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336426 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336426 is therefore inhibition of APP. Accordingly, utilities of GAM336426 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336428 S100B GCACACACCTCCTTG S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A

CAGTGGC NM_006272.1) is a GAM336428 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336428 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336428 is therefore inhibition of S100B, a GAM336428 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336428 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM336428 TGFB1 GCACACACCTCCTTG TGFB1 (Accession NM_000660.1) is another GAM336428 target gene. A A

CAGTGGC TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336428 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336428 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336428 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336429 ACE GTGCATCAGGATCTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A ACCAGAT (ACE, Accession NM_152831.1) is a GAM336429 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336429 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336429 is therefore inhibition of ACE, a GAM336429 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336429 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM44.

GAM336430 APPBP2 GTGCTTGACCATGTG GTGGCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336430 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336430 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336430 is therefore inhibition of APPBP2, a GAM336430 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336430 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336430 PRND GTGCTTGACCATGTG GTGGCAG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336430 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336430 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336430 is therefore inhibition of PRND, a GAM336430 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336430 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336431 APPBP2 GTGCTTGACCATGTG GTGGCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336431 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336431 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336431 is therefore inhibition of APPBP2, a GAM336431 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336431 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336431 PRND GTGCTTGACCATGTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GTGGCAG another GAM336431 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336431 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336431 is therefore inhibition of PRND, a GAM336431 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336431 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336432 APPBP2 GTGCTTGACCATGTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GTGGCAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336432 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336432 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336432 is therefore inhibition of APPBP2, a GAM336432 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336432 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336432 PRND GTGCTTGACCATGTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GTGGCAG another GAM336432 target gene. PRND BINDING SITE is a target binding

site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336432 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336432 is therefore inhibition of PRND, a GAM336432 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336432 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336433 APPBP2 GTGCTTGACCATGTG GTGGCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336433 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336433 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336433 is therefore inhibition of APPBP2, a GAM336433 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336433 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336433 PRND GTGCTTGACCATGTG GTGGCAG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336433 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336433 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336433 is therefore inhibition of PRND, a GAM336433 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336433 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336434 GYPA TAGTGCAAGGTTTTG Glycophorin A (includes MN blood group) (GYPA, Accession A A

CCAACTT NM_002099.2) is a GAM336434 target gene. GYPA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336434 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336434 is therefore inhibition of GYPA, a GAM336434 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336434 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336434 MME TAGTGCAAGGTTTTG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

CCAACTT enkephalinase, (MME, Accession NM_000902.2) is another GAM336434 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336434 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336434 is therefore inhibition of MME, a GAM336434 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336434 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336435 IGF1 ACTGGGATATGAAGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CTGTGTG NM_000618.2) is a GAM336435 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336435 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336435 is therefore inhibition of IGF1, a GAM336435 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336435 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336435 PIN1 ACTGGGATATGAAGA CTGTGTG Protein (peptidyl- prolyl cis/trans isomerase) NIMA- interacting 1 (PIN1, Accession NM_006221.1) is another GAM336435 target gene. PIN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PIN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336435 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336435 is therefore inhibition of PIN1, a GAM336435 target gene which intervenes in cell cycle regulation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336435 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PIN1.The function of PIN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM336439 CASP3 TGCATGATGCTGAGG TTTGGGA Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is a GAM336439 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336439 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336439 is therefore inhibition of CASP3, a GAM336439 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336439 GFAP TGCATGATGCTGAGG GFAP (Accession NM_002055.2) is another GAM336439 target gene. A A

TTTGGGA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336439 is therefore inhibition of GFAP. Accordingly, utilities of GAM336439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336439 NOTCH1 TGCATGATGCTGAGG Notch (Drosophila) Homolog 1 (translocation- associated) A A

TTTGGGA (NOTCH1, Accession NM_017617.2) is another GAM336439 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336439 is therefore inhibition of NOTCH1, a GAM336439 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336439 NPY TGCATGATGCTGAGG Neuropeptide Y (NPY, Accession NM_000905.2) is another A A

TTTGGGA GAM336439 target gene. NPY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NPY BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336439 is therefore inhibition of NPY, a GAM336439 target gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NPY.The function of NPY and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to GAM193.

GAM336440 CASP3 TGCATGATGCTGAGG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

TTTGGGA Accession NM_032991.1) is a GAM336440 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336440 is therefore inhibition of CASP3, a GAM336440 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336440 GFAP TGCATGATGCTGAGG GFAP (Accession NM_002055.2) is another GAM336440 target gene. A A

TTTGGGA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336440 is therefore inhibition of GFAP. Accordingly, utilities of GAM336440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336440 NOTCH1 TGCATGATGCTGAGG Notch (Drosophila) Homolog 1 (translocation- associated) A A

TTTGGGA (NOTCH1, Accession NM_017617.2) is another GAM336440 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336440 is therefore inhibition of NOTCH1, a GAM336440 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336440 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336440 NPY TGCATGATGCTGAGG Neuropeptide Y (NPY, Accession NM_000905.2) is another A A
TTTGGGA GAM336440 target gene. NPY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NPY BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336440 is therefore inhibition of NPY, a GAM336440 target gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NPY.The function of NPY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM193.

GAM336441 CTSB TGCACCACTACACTC CTSB (Accession NM_147782.1) is a GAM336441 target gene. CTSB A A
CTAGGCA BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336441 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336441 is therefore inhibition of CTSB. Accordingly, utilities of GAM336441 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336441 LRP1 TGCACCACTACACTC Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
CTAGGCA macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM336441 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336441 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336441 is therefore inhibition of LRP1, a GAM336441 target gene which is a recycling lipoprotein

receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336441 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM336441 RAGE TGCACCACTACACTC CTAGGCA A A

Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another GAM336441 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336441 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336441 is therefore inhibition of RAGE, a GAM336441 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM336441 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM336442 APPBP2 AAGCAGAACTGTTTT GTTTTCT A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336442 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336442 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336442 is therefore inhibition of APPBP2, a GAM336442 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336442 CAV1 AAGCAGAACTGTTTT GTTTTCT A A

Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM336442 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336442 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336442 is therefore inhibition of CAV1, a GAM336442 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336442 HTR2C AAGCAGAACTGTTTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

GTTTTCT NM_000868.1) is another GAM336442 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336442 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336442 is therefore inhibition of HTR2C, a GAM336442 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336442 NOTCH1 AAGCAGAACTGTTTT Notch (Drosophila) Homolog 1 (translocation- associated) A A

GTTTTCT (NOTCH1, Accession NM_017617.2) is another GAM336442 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336442 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336442 is therefore inhibition of NOTCH1, a GAM336442 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function

of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336445 MAPT GTGGCAAGTGACCAG Microtubule- associated Protein Tau (MAPT, Accession A A

ATGTCAC NM_173727.1) is a GAM336445 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336445 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336445 is therefore inhibition of MAPT, a GAM336445 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336445 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336447 ADAM17 TACAGTATCTGTAAA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

AACTGTC factor, (ADAM17, Accession NM_021832.1) is a GAM336447 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336447 is therefore inhibition of ADAM17, a GAM336447 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336448 GLUL AGGTGGGGTTTCACC Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

ATGTTGG NM_002065.3) is a GAM336448 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336448 is therefore inhibition of GLUL, a GAM336448 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336448 IAPP AGGTGGGGTTTCACC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
ATGTTGG another GAM336448 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336448 is therefore inhibition of IAPP, a GAM336448 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336448 PSEN1 AGGTGGGGTTTCACC PSEN1 (Accession NM_007318.1) is another GAM336448 target gene. A A
ATGTTGG PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336448 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336448 TRPM2 AGGTGGGGTTTCACC TRPM2 (Accession NM_003307.1) is another GAM336448 target gene. A A
ATGTTGG TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336448 is therefore inhibition of TRPM2, a GAM336448 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336450 IGF1 CTATTTTACATGGTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A ACTATCA NM_000618.2) is a GAM336450 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336450 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336450 is therefore inhibition of IGF1, a GAM336450 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336450 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336451 DSCR1 TAGCTGCCAGGCAAC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A AAGTACG NM_004414.3) is a GAM336451 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336451 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336451 is therefore inhibition of DSCR1, a GAM336451 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336451 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM1332.

GAM336451 MME TAGCTGCCAGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, A A

AAGTACG enkephalinase, (MME, Accession NM_007288.1) is another GAM336451 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336451 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336451 is therefore inhibition of MME, a GAM336451 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336451 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336452 DSCR1 TAGCTGCCAGGCAAC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

AAGTACG NM_004414.3) is a GAM336452 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336452 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336452 is therefore inhibition of DSCR1, a GAM336452 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336452 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM336452 MME TAGCTGCCAGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, A A

AAGTACG enkephalinase, (MME, Accession NM_007288.1) is another GAM336452 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336452 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336452 is therefore inhibition of MME, a GAM336452 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336452 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336453 S100B TCCCTGGGACAACTT S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A

TCTTATT NM_006272.1) is a GAM336453 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336453 is therefore inhibition of S100B, a GAM336453 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM336454 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336454 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336454 is therefore inhibition of APPBP2, a GAM336454 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336454 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336454 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336454 is therefore inhibition of BACE2, a GAM336454 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336454 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336454 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336454 is therefore inhibition of FHL2, a GAM336454 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336454 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336454 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336454 is therefore inhibition of IGF1, a GAM336454 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336454 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336454 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336454 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336454 is therefore inhibition of MME, a GAM336454 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336454 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336454 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336454 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336454 is therefore inhibition of PRND, a GAM336454 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336455 PRND TTGCAATAGTGAAAA AACTGAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a GAM336455 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded A A

by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336455 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336455 is therefore inhibition of PRND, a GAM336455 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336455 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336455 TNFSF5 TTGCAATAGTGAAAA AACTGAA A A TNFSF5 (Accession NM_000074.1) is another GAM336455 target gene. TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336455 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336455 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM336455 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM336456 APPBP2 CCAAAGTGCTAGGAA TACAGGT A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336456 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336456 is therefore inhibition of APPBP2, a GAM336456 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336456 HTR2A CCAAAGTGCTAGGAA A A 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession

TACAGGT NM_000621.1) is another GAM336456 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336456 is therefore inhibition of HTR2A, a GAM336456 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336456 IAPP CCAAAGTGCTAGGAA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

TACAGGT another GAM336456 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336456 is therefore inhibition of IAPP, a GAM336456 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336456 MTNR1A CCAAAGTGCTAGGAA Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

TACAGGT another GAM336456 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336456 is therefore inhibition of MTNR1A, a GAM336456 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336456

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336456 TGFB1 CCAAAGTGCTAGGAA TGFB1 (Accession NM_000660.1) is another GAM336456 target gene. A A

TACAGGT TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336456 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336458 APBA1 GTACTCCAGCCTGCC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

TGGGTAA 1 (X11) (APBA1, Accession NM_001163.2) is a GAM336458 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336458 is therefore inhibition of APBA1, a GAM336458 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336458 APPBP2 GTACTCCAGCCTGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGTAA Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336458 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336458 is therefore inhibition of APPBP2, a GAM336458 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336458 FHL2 GTACTCCAGCCTGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A TGGGTAA another GAM336458 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336458 is therefore inhibition of FHL2, a GAM336458 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336458 IGF1 GTACTCCAGCCTGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A TGGGTAA NM_000618.2) is another GAM336458 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336458 is therefore inhibition of IGF1, a GAM336458 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336458 MAPT GTACTCCAGCCTGCC Microtubule- associated Protein Tau (MAPT, Accession A A

TGGGTAA NM_173727.1) is another GAM336458 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336458 is therefore inhibition of MAPT, a GAM336458 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336458 PRND GTACTCCAGCCTGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGTAA another GAM336458 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336458 is therefore inhibition of PRND, a GAM336458 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336460 DSCR1 TGTAGTGTGAAAGGC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

ATAGTGT NM_004414.3) is a GAM336460 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336460 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336460 is therefore inhibition of DSCR1, a GAM336460 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336460 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM336461 CTNND2 GCAGTGAAGGAGGCA TGTGATC Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is a GAM336461 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336461 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336461 is therefore inhibition of CTNND2, a GAM336461 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336461 DHCR24 GCAGTGAAGGAGGCA TGTGATC 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM336461 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336461 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336461 is therefore inhibition of DHCR24, a GAM336461 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336462 A2M TGGCAAGTGGGCACT TTTCAGG Alpha- 2- macroglobulin (A2M, Accession NM_000014.3) is a GAM336462 target gene. A2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by A2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of A2M BINDING SITE, and secondary structure complementarity to the A A

nucleotide sequence of GAM336462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336462 is therefore inhibition of A2M, a GAM336462 target gene which inhibit all four classes of proteinases and therefore is associated with Alzheimer. Accordingly, utilities of GAM336462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with A2M.The function of A2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1653.

GAM336465 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336465 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336465 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336465 is therefore inhibition of APPBP2, a GAM336465 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336465 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336465 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336465 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336465 is therefore inhibition of BACE2, a GAM336465 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336465 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336465 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336465 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336465 is therefore inhibition of FHL2, a GAM336465 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336465 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336465 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336465 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336465 is therefore inhibition of IGF1, a GAM336465 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336465 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336465 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336465 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336465 is therefore inhibition of MME, a GAM336465 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336465 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336465 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336465 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336465 is therefore inhibition of PRND, a GAM336465 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336468 CAV1 GCCTCCATTTCTACA TCTCTA Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM336468 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336468 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336468 is therefore inhibition of CAV1, a GAM336468 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336468 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336468 GFAP GCCTCCATTTCTACA GFAP (Accession NM_002055.2) is another GAM336468 target gene. A A

TCTCTA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336468 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336468 is therefore inhibition of GFAP. Accordingly, utilities of GAM336468 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336469 APBB2 TGCAGCCTTGAACTC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TTTCTGG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336469 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336469 is therefore inhibition of APBB2, a GAM336469 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336469 BACE2 TGCAGCCTTGAACTC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TTTCTGG NM_138991.1) is another GAM336469 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336469 is therefore inhibition of BACE2, a GAM336469 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336469 FPRL1 TGCAGCCTTGAACTC A A TTTCTGG FPRL1 (Accession NM_001462.1) is another GAM336469 target gene. FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336469 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336469 HTR2A TGCAGCCTTGAACTC A A TTTCTGG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM336469 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336469 is therefore inhibition of HTR2A, a GAM336469 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336469 NCKAP1 TGCAGCCTTGAACTC A A TTTCTGG NCKAP1 (Accession NM_013436.2) is another GAM336469 target gene. NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336469 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM336469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM336469 TNFRSF5 TGCAGCCTTGAACTC A A target TNFRSF5 (Accession NM_152854.1) is another GAM336469

TTTCTGG gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336469 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336470 APBB2 TGCAGCCTTGAACTC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TTTCTGG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336470 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336470 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336470 is therefore inhibition of APBB2, a GAM336470 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336470 BACE2 TGCAGCCTTGAACTC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TTTCTGG NM_138991.1) is another GAM336470 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336470 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336470 is therefore inhibition of BACE2, a GAM336470 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336470 FPRL1 TGCAGCCTTGAACTC A A TTTCTGG FPRL1 (Accession NM_001462.1) is another GAM336470 target gene. FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336470 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336470 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336470 HTR2A TGCAGCCTTGAACTC A A TTTCTGG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM336470 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336470 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336470 is therefore inhibition of HTR2A, a GAM336470 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336470 NCKAP1 TGCAGCCTTGAACTC A A TTTCTGG NCKAP1 (Accession NM_013436.2) is another GAM336470 target gene. NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336470 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336470 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM336470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM336470 TNFRSF5 TGCAGCCTTGAACTC A A target TNFRSF5 (Accession NM_152854.1) is another GAM336470

TTTCTGG gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336470 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336470 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336472 CTSK TTCAGGACTGTCTGG CTSK (Accession NM_000396.2) is a GAM336472 target gene. CTSK A A

ATTTATT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336472 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336472 is therefore inhibition of CTSK. Accordingly, utilities of GAM336472 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336472 FPRL1 TTCAGGACTGTCTGG FPRL1 (Accession NM_001462.1) is another GAM336472 target gene. A A

ATTTATT FPRL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336472 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336472 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336472 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336474 FHL2 TGTCTGGAGGCGCAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TTTTCAG a GAM336474 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336474 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336474 is therefore inhibition of FHL2, a

GAM336474 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336474 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336474 GFAP TGTCTGGAGGCGCAG GFAP (Accession NM_002055.2) is another GAM336474 target gene. A A

TTTTCAG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336474 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336474 is therefore inhibition of GFAP. Accordingly, utilities of GAM336474 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336474 HD TGTCTGGAGGCGCAG HD (Accession NM_002111.3) is another GAM336474 target gene. HD A A

TTTTCAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336474 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336474 is therefore inhibition of HD. Accordingly, utilities of GAM336474 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336475 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336475 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336475 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336475 is therefore inhibition of APPBP2, a GAM336475 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM336475 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336475 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336475 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336475 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336475 is therefore inhibition of BACE2, a GAM336475 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336475 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336475 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336475 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336475 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336475 is therefore inhibition of FHL2, a GAM336475 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336475 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336475 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336475 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336475 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336475 is therefore inhibition of IGF1, a GAM336475 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336475 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336475 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336475 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336475 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336475 is therefore inhibition of MME, a GAM336475 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336475 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336475 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336475 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336475 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336475 is therefore inhibition of PRND, a GAM336475 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336475 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336476 DHCR24 TCCCTTTGAAGCCAG GTTCCAG A A 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM336476 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336476 is therefore inhibition of DHCR24, a GAM336476 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336476 TGFB1 TCCCTTTGAAGCCAG GTTCCAG A A TGFB1 (Accession NM_000660.1) is another GAM336476 target gene. TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336476 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336477 HTR2C GCACATTCCCGCAGG GTGTAAG A A 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is a GAM336477 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336477 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336477 is therefore inhibition of HTR2C, a GAM336477 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM336477 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336478 HTR2C GCACATTCCCGCAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A GTGTAAG NM_000868.1) is a GAM336478 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336478 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336478 is therefore inhibition of HTR2C, a GAM336478 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336478 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336479 HTR2C GCACATTCCCGCAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A GTGTAAG NM_000868.1) is a GAM336479 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336479 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336479 is therefore inhibition of HTR2C, a GAM336479 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336480 HTR2C GCACATTCCCGCAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A GTGTAAG NM_000868.1) is a GAM336480 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336480 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336480 is therefore inhibition of HTR2C, a GAM336480 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336480 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336483 CASP3 CTCTGAGTCTGAGAG AGTAGGT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is a GAM336483 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336483 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336483 is therefore inhibition of CASP3, a GAM336483 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336483 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336483 GLUL CTCTGAGTCTGAGAG AGTAGGT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession NM_002065.3) is another GAM336483 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336483 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336483 is therefore inhibition of GLUL, a GAM336483 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336483 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336483 MAPT CTCTGAGTCTGAGAG Microtubule- associated Protein Tau (MAPT, Accession A A

AGTAGGT NM_173727.1) is another GAM336483 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336483 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336483 is therefore inhibition of MAPT, a GAM336483 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336483 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336483 OLR1 CTCTGAGTCTGAGAG Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A

AGTAGGT (OLR1, Accession NM_002543.1) is another GAM336483 target gene. OLR1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336483 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336483 is therefore inhibition of OLR1, a GAM336483 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336483 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336483 PRND CTCTGAGTCTGAGAG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

AGTAGGT another GAM336483 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336483 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336483 is therefore inhibition of PRND, a GAM336483 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336483 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336484 CAV2 TAGGGAATGAACAAA Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM336484 target A A

TAGAGGC gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336484 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336484 is therefore inhibition of CAV2, a GAM336484 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336484 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336486 BAX TTACAAAATTTGGAG BCL2- associated X Protein (BAX, Accession NM_138765.1) is a A A

GGATTGT GAM336486 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336486 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336486 is therefore inhibition of BAX, a GAM336486 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM336486 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM336486 TFCP2 TTACAAAATTTGGAG Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A

GGATTGT another GAM336486 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336486 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336486 is therefore inhibition of TFCP2, a GAM336486 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336486 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM336487 CRYAB TGGCTAGGTAAGGGA CRYAB (Accession NM_001885.1) is a GAM336487 target gene. CRYAB A A
AG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CRYAB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRYAB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336487 is therefore inhibition of CRYAB. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRYAB.

GAM336487 CTSK TGGCTAGGTAAGGGA CTSK (Accession NM_000396.2) is another GAM336487 target gene. A A
AG CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336487 is therefore inhibition of CTSK. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336487 DHCR24 TGGCTAGGTAAGGGA 24- dehydrocholesterol Reductase (DHCR24, Accession A A
AG NM_014762.1) is another GAM336487 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336487 is therefore inhibition of DHCR24, a GAM336487 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336487 HTR2C TGGCTAGGTAAGGGA A A AG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM336487 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336487 is therefore inhibition of HTR2C, a GAM336487 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336487 IL1A TGGCTAGGTAAGGGA A A AG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336487 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336487 is therefore inhibition of IL1A, a GAM336487 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336487 PSEN1 TGGCTAGGTAAGGGA PSEN1 (Accession NM_000021.2) is another GAM336487 target gene. A A

AG PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336487 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336487 SNCA TGGCTAGGTAAGGGA SNCA (Accession NM_000345.2) is another GAM336487 target gene. A A

AG SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336487 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336487 is therefore inhibition of SNCA. Accordingly, utilities of GAM336487 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM336488 ARHA GAACTGTACTGGACC Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

CATAGTT is a GAM336488 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336488 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336488 is therefore inhibition of ARHA, a GAM336488 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336488 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336489 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336489 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336489 is therefore inhibition of APP. Accordingly, utilities of GAM336489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336490 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336490 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336490 is therefore inhibition of APPBP2, a GAM336490 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336490 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336490 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336490 is therefore inhibition of BACE2, a GAM336490 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM189.

GAM336490 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336490 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336490 is therefore inhibition of FHL2, a GAM336490 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336490 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336490 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336490 is therefore inhibition of IGF1, a GAM336490 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336490 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336490 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336490 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336490 is therefore inhibition of MME, a GAM336490 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336490 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336490 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336490 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336490 is therefore inhibition of PRND, a GAM336490 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336491 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336491 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336491 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336491 is therefore inhibition of APPBP2, a GAM336491 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336491 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336491 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336491 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336491 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336491 is therefore inhibition of BACE2, a GAM336491 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336491 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336491 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336491 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336491 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336491 is therefore inhibition of FHL2, a GAM336491 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336491 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336491 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336491 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336491 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336491 is therefore inhibition of HD. Accordingly, utilities of GAM336491 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HD.

GAM336491 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336491 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336491 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336491 is therefore inhibition of IGF1, a GAM336491 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336491 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336491 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
TGGGCAA another GAM336491 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336491 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336491 is therefore inhibition of PRND, a GAM336491 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336491 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336492 CASP3 CTGGCTAATTTTCTT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A
A
GAGTTTT Accession NM_004346.2) is a GAM336492 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336492 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM336492 is therefore inhibition of CASP3, a GAM336492 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336492 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336492 HTR2C CTGGCTAATTTTCTT A A GAGTTTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM336492 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336492 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336492 is therefore inhibition of HTR2C, a GAM336492 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336492 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336492 IDE CTGGCTAATTTTCTT A A GAGTTTT Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is another GAM336492 target gene. IDE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336492 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336492 is therefore inhibition of IDE, a GAM336492 target gene which may play a role in the cellular processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336492 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM336492 IGF1 CTGGCTAATTTTCTT A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession

GAGTTTT NM_000618.2) is another GAM336492 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336492 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336492 is therefore inhibition of IGF1, a GAM336492 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336492 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336493 FHL2 TAGTAGTTAGAGGCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GCAGTGA a GAM336493 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336493 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336493 is therefore inhibition of FHL2, a GAM336493 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336493 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336494 OLR1 TATCACGTGCAGCTT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A

TGCTGAC (OLR1, Accession NM_002543.1) is a GAM336494 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336494 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336494 is therefore inhibition of OLR1, a GAM336494 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336494 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336495 CASP3 CTGGCTAATTTTCTT GAGTTTT A A Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_004346.2) is a GAM336495 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336495 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336495 is therefore inhibition of CASP3, a GAM336495 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336495 HTR2C CTGGCTAATTTTCTT GAGTTTT A A 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM336495 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336495 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336495 is therefore inhibition of HTR2C, a GAM336495 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336495 IDE CTGGCTAATTTTCTT GAGTTTT A A Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is another GAM336495 target gene. IDE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336495 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336495 is therefore inhibition of IDE, a GAM336495 target gene which may play a role in the cellular processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM336495 IGF1 CTGGCTAATTTTCTT GAGTTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336495 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336495 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336495 is therefore inhibition of IGF1, a GAM336495 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336496 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM336496 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336496 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336496 is therefore inhibition of APP. Accordingly, utilities of GAM336496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336497 ADAM17 GTGCATTTGTAGTTA AATGTGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_003183.3) is a GAM336497 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` A A

untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336497 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336497 is therefore inhibition of ADAM17, a GAM336497 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336497 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336497 FPRL1 GTGCATTTGTAGTTA FPRL1 (Accession NM_001462.1) is another GAM336497 target gene. A A

AATGTGT FPRL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336497 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336497 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336497 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336497 GYPA GTGCATTTGTAGTTA Glycophorin A (includes MN blood group) (GYPA, Accession A A

AATGTGT NM_002099.2) is another GAM336497 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336497 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336497 is therefore inhibition of GYPA, a GAM336497 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336497 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336498 ADAM17 GTGCATTTGTAGTTA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

AATGTGT factor, (ADAM17, Accession NM_003183.3) is a GAM336498 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336498 is therefore inhibition of ADAM17, a GAM336498 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336498 FPRL1 GTGCATTTGTAGTTA FPRL1 (Accession NM_001462.1) is another GAM336498 target gene. A A

AATGTGT FPRL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336498 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336498 GYPA GTGCATTTGTAGTTA Glycophorin A (includes MN blood group) (GYPA, Accession A A

AATGTGT NM_002099.2) is another GAM336498 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336498 is therefore inhibition of GYPA, a GAM336498 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336499 HTR2A AGGGAGTGTCAGAAT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
GCCAGCA NM_000621.1) is a GAM336499 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336499 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336499 is therefore inhibition of HTR2A, a GAM336499 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336499 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336502 APBB2 AGCTGGATTGTTTAC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
CTGGGGC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336502 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336502 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336502 is therefore inhibition of APBB2, a GAM336502 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336502 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336502 NOTCH1 AGCTGGATTGTTTAC Notch (Drosophila) Homolog 1 (translocation- associated) A A
CTGGGGC (NOTCH1, Accession NM_017617.2) is another GAM336502 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336502 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336502 is therefore inhibition of NOTCH1, a GAM336502 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336502 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336503 HADH2 TTACTGGGCTCCTCT Hydroxyacyl- Coenzyme A Dehydrogenase, Type II (HADH2, A A
CAGTGTG Accession NM_004493.1) is a GAM336503 target gene. HADH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HADH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HADH2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336503 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336503 is therefore inhibition of HADH2, a GAM336503 target gene which catalyzes the reversible oxidation of L- 3- hydroxyacyl- CoAs to form 3- ketoacyl- CoAs and binds intracellular amyloid- beta. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336503 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HADH2.The function of HADH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1820.

GAM336504 ABCD1 AGTGGCCCTGGCCCT ABCD1 (Accession NM_000033.2) is a GAM336504 target gene. ABCD1 A A
GGGGCAT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336504 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336504 is therefore inhibition of ABCD1. Accordingly, utilities of GAM336504 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM336504 MAPT AGTGGCCCTGGCCCT Microtubule- associated Protein Tau (MAPT, Accession A A
GGGGCAT NM_173727.1) is another GAM336504 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336504 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336504 is therefore inhibition of MAPT, a GAM336504 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336504 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336505 BACE ATGGGCAGTTTCTTC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

CCTTTCC is a GAM336505 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336505 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336505 is therefore inhibition of BACE, a GAM336505 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336505 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336506 CASP3 CTGGCTAATTTTCTT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

GAGTTTT Accession NM_004346.2) is a GAM336506 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336506 is therefore inhibition of CASP3, a GAM336506 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM801.

GAM336506 HTR2C CTGGCTAATTTTCTT GAGTTTT A A 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM336506 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336506 is therefore inhibition of HTR2C, a GAM336506 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336506 IDE CTGGCTAATTTTCTT GAGTTTT A A Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is another GAM336506 target gene. IDE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336506 is therefore inhibition of IDE, a GAM336506 target gene which may play a role in the cellular processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM336506 IGF1 CTGGCTAATTTTCTT GAGTTTT A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336506 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336506 is therefore inhibition of

IGF1, a GAM336506 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336507 TNFRSF6 CTATTGGATTTTAAG TNFRSF6 (Accession NM_000043.3) is a GAM336507 target gene. A A

CATTGGG TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336507 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336507 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336507 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336508 TNFRSF6 CTATTGGATTTTAAG TNFRSF6 (Accession NM_000043.3) is a GAM336508 target gene. A A

CATTGGG TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336508 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336508 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336508 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336509 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336509 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336509 is therefore inhibition of APPBP2,

a GAM336509 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336509 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336509 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336509 is therefore inhibition of BACE2, a GAM336509 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336509 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336509 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336509 is therefore inhibition of FHL2, a GAM336509 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336509 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336509 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336509 is therefore inhibition of IGF1, a GAM336509 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336509 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336509 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336509 is therefore inhibition of MME, a GAM336509 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336509 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336509 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336509 is therefore inhibition of PRND, a GAM336509 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336510 CASP3 CTGGCTAATTTTCTT GAGTTTT A A Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_004346.2) is a GAM336510 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336510 is therefore inhibition of CASP3, a GAM336510 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336510 HTR2C CTGGCTAATTTTCTT GAGTTTT A A 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM336510 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336510 is therefore inhibition of HTR2C, a GAM336510 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336510 IDE CTGGCTAATTTTCTT GAGTTTT A A Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is another GAM336510 target gene. IDE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336510 is therefore inhibition of IDE, a GAM336510 target gene which may play a role in the cellular processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM336510 IGF1 CTGGCTAATTTTCTT GAGTTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336510 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336510 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336510 is therefore inhibition of IGF1, a GAM336510 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336511 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM336511 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336511 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336511 is therefore inhibition of APP. Accordingly, utilities of GAM336511 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336512 CNTF GTAAAGAAATCATAA AAGTCCA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a GAM336512 target gene. CNTF BINDING SITE is a target binding site A A

found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336512 is therefore inhibition of CNTF, a GAM336512 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336512 CTNND2 GTAAAGAAATCATAA AAGTCCA Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM336512 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336512 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336512 is therefore inhibition of CTNND2, a GAM336512 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336512 LRP1 GTAAAGAAATCATAA AAGTCCA Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM336512 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336512 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336512 is therefore inhibition of LRP1, a GAM336512 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336512 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM336513 APBB2 TATGATTGTTTCATT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TGTTGGA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336513 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336513 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336513 is therefore inhibition of APBB2, a GAM336513 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336513 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336514 FHL2 CATTGCACTCCACCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TAGGCAA a GAM336514 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336514 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336514 is therefore inhibition of FHL2, a GAM336514 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336514 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336514 HD CATTGCACTCCACCC HD (Accession NM_002111.3) is another GAM336514 target gene. HD A A

TAGGCAA BINDING SITE1 and HD BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 and HD BINDING SITE2, and secondary structure complementarity to the

nucleotide sequence of GAM336514 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336514 is therefore inhibition of HD. Accordingly, utilities of GAM336514 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336514 IGF1 CATTGCACTCCACCC TAGGCAA A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336514 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336514 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336514 is therefore inhibition of IGF1, a GAM336514 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336514 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336514 PRND CATTGCACTCCACCC TAGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336514 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336514 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336514 is therefore inhibition of PRND, a GAM336514 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336514 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336516 APPBP2 ACTGTACTCCAGCCT GGGCAAC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336516 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336516 is therefore inhibition of APPBP2, a GAM336516 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336516 FHL2 ACTGTACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336516 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336516 is therefore inhibition of FHL2, a GAM336516 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336516 IGF1 ACTGTACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336516 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336516 is therefore inhibition of IGF1, a GAM336516 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336516 PRND ACTGTACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336516 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336516 is therefore inhibition of PRND, a GAM336516 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336518 GFAP TGAGGTGATCAGCAA GFAP (Accession NM_002055.2) is a GAM336518 target gene. GFAP A A

GGTGGAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336518 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336518 is therefore inhibition of GFAP. Accordingly, utilities of GAM336518 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336518 IGF1 TGAGGTGATCAGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGTGGAG NM_000618.2) is another GAM336518 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336518 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336518 is therefore inhibition of IGF1, a GAM336518 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336518 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336518 IL1A TGAGGTGATCAGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

GGTGGAG GAM336518 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336518 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336518 is therefore inhibition of IL1A, a GAM336518 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336518 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336519 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336519 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336519 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336519 is therefore inhibition of APP. Accordingly, utilities of GAM336519 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336520 BCHE TTCTGTGCAGGTTAA BCHE (Accession NM_000055.1) is a GAM336520 target gene. BCHE A A

CATTTCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336520 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336520 is therefore inhibition of BCHE. Accordingly, utilities of GAM336520 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336520 TNF TTCTGTGCAGGTTAA Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A CATTTCT Accession NM_000594.2) is another GAM336520 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336520 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336520 is therefore inhibition of TNF, a GAM336520 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM336520 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336522 APLP2 TTGAGAGCATAGAGC Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A CAGGAAG NM_001642.1) is a GAM336522 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336522 is therefore inhibition of APLP2, a GAM336522 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336523 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336523 target gene. APP A A GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336523 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336523 is therefore inhibition of APP. Accordingly, utilities of GAM336523 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336524 BACE TGGTCTCCTATCCTG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

GCTCACA is a GAM336524 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336524 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336524 is therefore inhibition of BACE, a GAM336524 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336524 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336526 B2M GACATGGAGACAACA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is a A A

GCCAAAT GAM336526 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336526 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336526 is therefore inhibition of B2M, a GAM336526 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336526 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM336527 B2M GACATGGAGACAACA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is a A A

GCCAAAT GAM336527 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336527 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336527 is therefore inhibition of B2M, a GAM336527 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336527 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM336528 ACE TCACAGTGATGGGTT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A CAGGAAT (ACE, Accession NM_152831.1) is a GAM336528 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336528 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336528 is therefore inhibition of ACE, a GAM336528 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336528 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336529 ACE TCACAGTGATGGGTT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A CAGGAAT (ACE, Accession NM_152831.1) is a GAM336529 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336529 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336529 is therefore inhibition of ACE, a GAM336529 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336529 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336532 ACT TTTGTACGTCAACTC Activator of CAMP- responsive Element Modulator (CR (ACT, A A AGCCTTA Accession NM_020482.3) is a GAM336532 target gene. ACT BINDING SITE

is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336532 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336532 is therefore inhibition of ACT, a GAM336532 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336532 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336533 ACT TTTGTACGTCAACTC Activator of CAMP- responsive Element Modulator (CR (ACT, A A

AGCCTTA Accession NM_020482.3) is a GAM336533 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336533 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336533 is therefore inhibition of ACT, a GAM336533 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336533 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336534 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336534 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336534 is therefore inhibition of APPBP2, a GAM336534 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM336534 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336534 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336534 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336534 is therefore inhibition of BACE2, a GAM336534 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336534 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336534 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336534 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336534 is therefore inhibition of FHL2, a GAM336534 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336534 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336534 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336534 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336534 is therefore inhibition of IGF1, a GAM336534 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336534 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336534 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336534 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336534 is therefore inhibition of MME, a GAM336534 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336534 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336534 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336534 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336534 is therefore inhibition of PRND, a GAM336534 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336534 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336535 APLP2 GAGGAGGTGGGGCAG A A CAGCAGG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM336535 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336535 is therefore inhibition of APLP2, a GAM336535 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336535 BACE2 GAGGAGGTGGGGCAG A A CAGCAGG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336535 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of BACE2, a GAM336535 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336535 FHL2 GAGGAGGTGGGGCAG A A CAGCAGG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336535 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of FHL2, a GAM336535 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336535 GFAP GAGGAGGTGGGGCAG GFAP (Accession NM_002055.2) is another GAM336535 target gene. A A

CAGCAGG GFAP BINDING SITE1 through GFAP BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 through GFAP BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of GFAP. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336535 MT3 GAGGAGGTGGGGCAG Metallothionein 3 (MT3, Accession NM_005954.1) is another A A

CAGCAGG GAM336535 target gene. MT3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MT3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of MT3, a GAM336535 target gene which inhibits survival and neurite formation of cortical neurons in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MT3.The function of MT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3890.

GAM336535 MTNR1A GAGGAGGTGGGGCAG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

CAGCAGG another GAM336535 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of MTNR1A, a GAM336535 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336535 OGDH GAGGAGGTGGGGCAG A A CAGCAGG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM336535 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of OGDH, a GAM336535 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM336535 PSEN1 GAGGAGGTGGGGCAG A A CAGCAGG PSEN1 (Accession NM_007318.1) is another GAM336535 target gene. PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336535 SNCG GAGGAGGTGGGGCAG A A CAGCAGG SYNUCLEIN, GAMMA (SNCG, Accession NM_003087.1) is another GAM336535 target gene. SNCG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCG,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336535 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336535 is therefore inhibition of SNCG, a GAM336535 target gene which plays a role in neurofilament network integrity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336535 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCG.The function of SNCG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336536 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336536 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336536 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336536 is therefore inhibition of APP. Accordingly, utilities of GAM336536 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336537 BACE CCAGGGTACTCTGGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

ATCACTT is a GAM336537 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336537 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336537 is therefore inhibition of BACE, a GAM336537 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336537 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336537 FLNB CCAGGGTACTCTGGG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A

ATCACTT NM_001457.1) is another GAM336537 target gene. FLNB BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336537 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336537 is therefore inhibition of FLNB, a GAM336537 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336537 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336537 IDE CCAGGGTACTCTGGG Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is A A

ATCACTT another GAM336537 target gene. IDE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336537 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336537 is therefore inhibition of IDE, a GAM336537 target gene which may play a role in the cellular processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336537 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM336538 BACE CCAGGGTACTCTGGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

ATCACTT is a GAM336538 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336538 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336538 is therefore inhibition of BACE, a GAM336538 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336538 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336538 FLNB CCAGGGTACTCTGGG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
ATCACTT NM_001457.1) is another GAM336538 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336538 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336538 is therefore inhibition of FLNB, a GAM336538 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336538 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336538 IDE CCAGGGTACTCTGGG Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is A A
ATCACTT another GAM336538 target gene. IDE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336538 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336538 is therefore inhibition of IDE, a GAM336538 target gene which may play a role in the cellular processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336538 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM336539 FOS TAGTGCAGTTGAATG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
AACATTT Accession NM_005252.2) is a GAM336539 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336539 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336539 is therefore inhibition of FOS, a GAM336539 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336539 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336540 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336540 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336540 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336540 is therefore inhibition of APPBP2, a GAM336540 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336540 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336540 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336540 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336540 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336540 is therefore inhibition of BACE2, a GAM336540 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336540 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336540 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336540 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336540 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336540 is therefore inhibition of FHL2, a GAM336540 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336540 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336540 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336540 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336540 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336540 is therefore inhibition of IGF1, a GAM336540 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336540 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336540 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336540 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336540 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336540 is therefore inhibition of MME, a GAM336540 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336540 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336540 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM336540 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336540 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336540 is therefore inhibition of PRND, a GAM336540 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336540 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336541 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336541 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336541 is therefore inhibition of APPBP2, a GAM336541 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM336541 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336541 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336541 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336541 is therefore inhibition of BACE2, a GAM336541 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336541 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336541 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336541 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336541 is therefore inhibition of FHL2, a GAM336541 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336541 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336541 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336541 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336541 is therefore inhibition of IGF1, a GAM336541 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336541 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336541 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336541 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336541 is therefore inhibition of MME, a GAM336541 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336541 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336541 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336541 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336541 is therefore inhibition of PRND, a GAM336541 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336545 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336545 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336545 is therefore inhibition of APPBP2, a GAM336545 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336545 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336545 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336545 is therefore inhibition of BACE2, a GAM336545 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336545 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336545 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336545 is therefore inhibition of

FHL2, a GAM336545 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336545 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336545 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336545 is therefore inhibition of HD. Accordingly, utilities of GAM336545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336545 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336545 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336545 is therefore inhibition of IGF1, a GAM336545 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336545 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336545 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide

sequence of GAM336545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336545 is therefore inhibition of PRND, a GAM336545 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336546 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336546 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336546 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336546 is therefore inhibition of APP. Accordingly, utilities of GAM336546 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336548 FLNB TCTGGTTTTAATCCT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
GAAGGCA NM_001457.1) is a GAM336548 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336548 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336548 is therefore inhibition of FLNB, a GAM336548 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336548 LRP1 TCTGGTTTTAATCCT Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
GAAGGCA macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM336548 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336548 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336548 is therefore inhibition of LRP1, a GAM336548 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM336549 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336549 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336549 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336549 is therefore inhibition of APP. Accordingly, utilities of GAM336549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336550 ACE TCAGAGCAGTGCCGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

AGCCCAG (ACE, Accession NM_152831.1) is a GAM336550 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336550 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336550 is therefore inhibition of ACE, a GAM336550 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336550 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336550 AVP TCAGAGCAGTGCCGA AVP (Accession NM_000490.2) is another GAM336550 target gene. A A

AGCCCAG AVP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE,

and secondary structure complementarity to the nucleotide sequence of GAM336550 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336550 is therefore inhibition of AVP. Accordingly, utilities of GAM336550 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336550 BACE2 TCAGAGCAGTGCCGA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A AGCCCAG NM_012105.3) is another GAM336550 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336550 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336550 is therefore inhibition of BACE2, a GAM336550 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336550 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336551 CTSK GAGTTAAGCAAAGAG CTSK (Accession NM_000396.2) is a GAM336551 target gene. CTSK A A AGGAAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336551 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336551 is therefore inhibition of CTSK. Accordingly, utilities of GAM336551 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336551 HTR2C GAGTTAAGCAAAGAG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A AGGAAGA NM_000868.1) is another GAM336551 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336551 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336551 is therefore inhibition of HTR2C, a GAM336551 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336551 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336552 ACE CAGCACCATCAGATG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A ACTGTAT (ACE, Accession NM_152831.1) is a GAM336552 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336552 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336552 is therefore inhibition of ACE, a GAM336552 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336553 ACE GCAGGATGGTTGGAC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A TGAAGGG (ACE, Accession NM_152831.1) is a GAM336553 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336553 is therefore inhibition of ACE, a GAM336553 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336553 SERPINA GCAGGATGGTTGGAC Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha- 1 A A

3 TGAAGGG antiprotei (SERPINA3, Accession NM_001085.2) is another GAM336553 target gene. SERPINA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SERPINA3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336553 is therefore inhibition of SERPINA3, a GAM336553 target gene which is a member of the serpin family of serine protease inhibitors. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SERPINA3.The function of SERPINA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM336556 NGB GGGAGAAAAGGAGGG Neuroglobin (NGB, Accession NM_021257.2) is a GAM336556 target A A

GATACAG gene. NGB BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336556 is therefore inhibition of NGB, a GAM336556 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336557 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336557 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336557 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336557 is therefore inhibition of APP. Accordingly, utilities of GAM336557 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336558 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336558 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336558 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336558 is therefore inhibition of APPBP2, a GAM336558 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336558 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336558 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336558 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336558 is therefore inhibition of BACE2, a GAM336558 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336558 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336558 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336558 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336558 is therefore inhibition of FHL2, a GAM336558 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336558 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336558 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336558 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336558 is therefore inhibition of IGF1, a GAM336558 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336558 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336558 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336558 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336558 is therefore inhibition of MME, a GAM336558 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336558 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336558 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336558 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336558 is therefore inhibition of PRND, a GAM336558 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336559 CRAT GAGAGGTGAAGCCAG Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is a A A

GCTTCTG GAM336559 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336559 is therefore inhibition of CRAT, a GAM336559 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336560 ADAM17 AAGTGCTGGTATTAC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

AAGTGTG factor, (ADAM17, Accession NM_021832.1) is a GAM336560 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336560 is therefore inhibition of ADAM17,

a GAM336560 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336560 GLUL AAGTGCTGGTATTAC A A AAGTGTG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession NM_002065.3) is another GAM336560 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336560 is therefore inhibition of GLUL, a GAM336560 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336560 MTNR1A AAGTGCTGGTATTAC A A AAGTGTG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM336560 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336560 is therefore inhibition of MTNR1A, a GAM336560 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336561 APCS TGTAGCAGAACACTG a A A GGTCCAG Amyloid P Component, Serum (APCS, Accession NM_001639.2) is a GAM336561 target gene. APCS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APCS,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APCS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336561 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336561 is therefore inhibition of APCS, a GAM336561 target gene which can interact with dna and histones and may scavenge nuclear material released from damaged circulating cells. may also function as a calcium- dependent lectin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336561 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APCS.The function of APCS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM772.

GAM336561 APPBP2 TGTAGCAGAACACTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGTCCAG Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336561 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336561 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336561 is therefore inhibition of APPBP2, a GAM336561 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336561 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336563 APPBP2 ACTGCACTTCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAT Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336563 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336563 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336563 is therefore inhibition of APPBP2, a GAM336563 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336563 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336563 FHL2 ACTGCACTTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAT another GAM336563 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336563 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336563 is therefore inhibition of FHL2, a GAM336563 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336563 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336563 IGF1 ACTGCACTTCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAT NM_000618.2) is another GAM336563 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336563 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336563 is therefore inhibition of IGF1, a GAM336563 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336563 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336563 PRND ACTGCACTTCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAT another GAM336563 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336563 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336563 is therefore inhibition of PRND, a GAM336563 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336563 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336564 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336564 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336564 is therefore inhibition of APPBP2, a GAM336564 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336564 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336564 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336564 is therefore inhibition of BACE2, a GAM336564 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336564 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336564 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336564 is therefore inhibition of FHL2, a GAM336564 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336564 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336564 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336564 is therefore inhibition of HD. Accordingly, utilities of GAM336564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336564 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336564 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336564 is therefore inhibition of IGF1, a GAM336564 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336564 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336564 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336564 is therefore inhibition of PRND, a GAM336564 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336565 CTSB TTCTGCCACTGCATT CTSB (Accession NM_147780.1) is a GAM336565 target gene. CTSB A A

CCAGCCT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336565 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336565 is therefore inhibition of CTSB. Accordingly, utilities of GAM336565 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336565 FHL2 TTCTGCCACTGCATT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CCAGCCT another GAM336565 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336565 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336565 is therefore inhibition of FHL2, a GAM336565 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336565 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336565 IGF1 TTCTGCCACTGCATT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A CCAGCCT NM_000618.2) is another GAM336565 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336565 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336565 is therefore inhibition of IGF1, a GAM336565 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336565 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336565 PRND TTCTGCCACTGCATT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A CCAGCCT another GAM336565 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336565 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336565 is therefore inhibition of PRND, a GAM336565 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336565 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336567 TRPM2 AAGGAAGTGTCTCTT TRPM2 (Accession NM_003307.1) is a GAM336567 target gene. TRPM2 A A

GGCTGGC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336567 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336567 is therefore inhibition of TRPM2, a GAM336567 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336567 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336568 TRPM2 AAGGAAGTGTCTCTT TRPM2 (Accession NM_003307.1) is a GAM336568 target gene. TRPM2 A A

GGCTGGC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336568 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336568 is therefore inhibition of TRPM2, a GAM336568 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336568 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336569 TRPM2 AAGGAAGTGTCTCTT TRPM2 (Accession NM_003307.1) is a GAM336569 target gene. TRPM2 A A

GGCTGGC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336569 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336569 is therefore inhibition of TRPM2, a GAM336569 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336569 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336570 ARHA CTGGAGAGGAGCGGT Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

CACTGGT is a GAM336570 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336570 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336570 is therefore inhibition of ARHA, a GAM336570 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336570 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336570 FOS CTGGAGAGGAGCGGT V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A

CACTGGT Accession NM_005252.2) is another GAM336570 target gene. FOS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336570 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336570 is therefore inhibition of FOS, a GAM336570 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336570 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336571 APBB2 GGCCTGGTGGCTGTT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GTTTTGG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336571 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336571 is therefore inhibition of APBB2, a GAM336571 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336571 APCS GGCCTGGTGGCTGTT Amyloid P Component, Serum (APCS, Accession NM_001639.2) is A A

GTTTTGG another GAM336571 target gene. APCS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APCS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336571 is therefore inhibition of APCS, a GAM336571 target gene which can interact with dna and histones and may scavenge nuclear material released from damaged circulating cells. may also function as a calcium- dependent lectin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APCS.The function of APCS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM772.

GAM336571 BACE2 GGCCTGGTGGCTGTT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GTTTTGG NM_138991.1) is another GAM336571 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336571 is therefore inhibition of BACE2, a GAM336571 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336571 PRND GGCCTGGTGGCTGTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GTTTTGG another GAM336571 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336571 is therefore inhibition of PRND, a GAM336571 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336572 ADAMTS5 AAGTTTTTTTAAATT A Disintegrin- like and Metalloprotease (reprolysin type) with A A AGCTAGG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336572 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336572 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336572 is therefore inhibition of ADAMTS5, a GAM336572 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336572 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336572 S100B AAGTTTTTTTAAATT S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A AGCTAGG NM_006272.1) is another GAM336572 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336572 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336572 is therefore inhibition of S100B, a GAM336572 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336572 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function

of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM336573 APPBP2 ATTGCACTCCAGCCT GGGTGAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336573 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336573 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336573 is therefore inhibition of APPBP2, a GAM336573 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336573 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336573 FHL2 ATTGCACTCCAGCCT GGGTGAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336573 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336573 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336573 is therefore inhibition of FHL2, a GAM336573 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336573 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336573 IGF1 ATTGCACTCCAGCCT GGGTGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336573 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336573 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336573 is therefore inhibition of IGF1, a GAM336573 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336573 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336573 PRND ATTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTGAC another GAM336573 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336573 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336573 is therefore inhibition of PRND, a GAM336573 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336573 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336573 TNFRSF5 ATTGCACTCCAGCCT TNFRSF5 (Accession NM_152854.1) is another GAM336573 target A A
GGGTGAC gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336573 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336573 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336573 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336574 APBB2 GCAGCGCTGAGATGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
TTTGTTG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336574 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336574 is therefore inhibition of APBB2, a GAM336574 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336574 MAPT GCAGCGCTGAGATGA Microtubule- associated Protein Tau (MAPT, Accession A A
TTTGTTG NM_173727.1) is another GAM336574 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336574 is therefore inhibition of MAPT, a GAM336574 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336575 APPBP2 ATTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGTGAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336575 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336575 is therefore inhibition of APPBP2, a GAM336575 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336575 FHL2 ATTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTGAC another GAM336575 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336575 is therefore inhibition of FHL2, a GAM336575 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336575 IGF1 ATTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTGAC NM_000618.2) is another GAM336575 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336575 is therefore inhibition of IGF1, a GAM336575 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336575 PRND ATTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGTGAC another GAM336575 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336575 is therefore inhibition of PRND, a GAM336575 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336575 TNFRSF5 ATTGCACTCCAGCCT TNFRSF5 (Accession NM_152854.1) is another GAM336575 target A A

GGGTGAC gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336575 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336578 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGCGACA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336578 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336578 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336578 is therefore inhibition of APPBP2, a GAM336578 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336578 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336578 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGCGACA another GAM336578 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336578 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336578 is therefore inhibition of FHL2, a GAM336578 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336578 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336578 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGCGACA NM_000618.2) is another GAM336578 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336578 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336578 is therefore inhibition of IGF1, a GAM336578 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336578 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336578 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGCGACA another GAM336578 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336578 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336578 is therefore inhibition of PRND, a GAM336578 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336578 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336579 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGCGACA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336579 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336579 is therefore inhibition of APPBP2, a GAM336579 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336579 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGCGACA another GAM336579 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336579 is therefore inhibition of FHL2, a GAM336579 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336579 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGCGACA NM_000618.2) is another GAM336579 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336579 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336579 is therefore inhibition of IGF1, a GAM336579 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336579 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGCGACA another GAM336579 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336579 is therefore inhibition of PRND, a GAM336579 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336580 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336580 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336580 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336580 is therefore inhibition of APPBP2, a GAM336580 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336580 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336580 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336580 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336580 is therefore inhibition of BACE2, a GAM336580 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336580 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336580 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336580 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336580 is therefore inhibition of FHL2, a GAM336580 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336580 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336580 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336580 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336580 is therefore inhibition of IGF1, a GAM336580 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336580 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336580 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336580 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336580 is therefore inhibition of MME, a GAM336580 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336580 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336580 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336580 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336580 is therefore inhibition of PRND, a GAM336580 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336581 BLMH GTCCTGGAGCTGTTG Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is a A A
GAGAAAT GAM336581 target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336581 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336581 is therefore inhibition of BLMH, a GAM336581 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM336581 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM336582 APPBP2 ATTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGTGAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336582 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336582 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336582 is therefore inhibition of APPBP2, a GAM336582 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336582 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336582 FHL2 ATTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGTGAC another GAM336582 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336582 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336582 is therefore inhibition of FHL2, a GAM336582 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336582 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336582 IGF1 ATTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGTGAC NM_000618.2) is another GAM336582 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336582 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336582 is therefore inhibition of IGF1, a GAM336582 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336582 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336582 PRND ATTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTGAC another GAM336582 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336582 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336582 is therefore inhibition of PRND, a GAM336582 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336582 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336582 TNFRSF5 ATTGCACTCCAGCCT TNFRSF5 (Accession NM_152854.1) is another GAM336582 target A A
GGGTGAC gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336582 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336582 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336582 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336583 APLP2 GAGGTAGAGGTTGCA GTGAGTG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM336583 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336583 is therefore inhibition of APLP2, a GAM336583 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336583 APPBP2 GAGGTAGAGGTTGCA GTGAGTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336583 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336583 is therefore inhibition of APPBP2, a GAM336583 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336583 BACE GAGGTAGAGGTTGCA GTGAGTG Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) is another GAM336583 target gene. BACE BINDING SITE is a target A A

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336583 is therefore inhibition of BACE, a GAM336583 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336583 FHL2 GAGGTAGAGGTTGCA A A GTGAGTG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336583 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336583 is therefore inhibition of FHL2, a GAM336583 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336583 GYPA GAGGTAGAGGTTGCA A A GTGAGTG Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM336583 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336583 is therefore inhibition of GYPA, a GAM336583 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336583 IGF1 GAGGTAGAGGTTGCA GTGAGTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336583 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336583 is therefore inhibition of IGF1, a GAM336583 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336583 PRND GAGGTAGAGGTTGCA GTGAGTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336583 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336583 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336583 is therefore inhibition of PRND, a GAM336583 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336583 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336584 APLP2 GAGGTAGAGGTTGCA GTGAGTG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM336584 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure A A

complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336584 is therefore inhibition of APLP2, a GAM336584 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336584 APPBP2 GAGGTAGAGGTTGCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GTGAGTG Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336584 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336584 is therefore inhibition of APPBP2, a GAM336584 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336584 BACE GAGGTAGAGGTTGCA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

GTGAGTG is another GAM336584 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336584 is therefore inhibition of BACE, a GAM336584 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to GAM99.

GAM336584 FHL2 GAGGTAGAGGTTGCA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GTGAGTG another GAM336584 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336584 is therefore inhibition of FHL2, a GAM336584 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336584 GYPA GAGGTAGAGGTTGCA Glycophorin A (includes MN blood group) (GYPA, Accession A A

GTGAGTG NM_002099.2) is another GAM336584 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336584 is therefore inhibition of GYPA, a GAM336584 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336584 IGF1 GAGGTAGAGGTTGCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GTGAGTG NM_000618.2) is another GAM336584 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336584 is therefore inhibition of

IGF1, a GAM336584 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336584 PRND GAGGTAGAGGTTGCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GTGAGTG another GAM336584 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336584 is therefore inhibition of PRND, a GAM336584 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336585 APBB2 GTTACAGCTCTCAAA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GAAGACA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336585 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336585 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336585 is therefore inhibition of APBB2, a GAM336585 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336585 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336585 GAL GTTACAGCTCTCAAA Galanin (GAL, Accession NM_015973.2) is another GAM336585 A A
GAAGACA target gene. GAL BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by GAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GAL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336585 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336585 is therefore inhibition of GAL, a GAM336585 target gene which stimulates LH secretion and enhances LHRH- induced LH release from dispersed anterior pituitary cells in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336585 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GAL.The function of GAL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3293.

GAM336585 PSEN1 GTTACAGCTCTCAAA PSEN1 (Accession NM_000021.2) is another GAM336585 target gene. A A

GAAGACA PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336585 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336585 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336585 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336586 ADAM10 CACTGCACTCCAGCC A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A

CGGCAAC Accession NM_001110.1) is a GAM336586 target gene. ADAM10 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336586 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336586 is therefore inhibition of ADAM10, a GAM336586 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336586 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM336586 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CGGCAAC another GAM336586 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336586 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336586 is therefore inhibition of FHL2, a GAM336586 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336586 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336586 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CGGCAAC NM_000618.2) is another GAM336586 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336586 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336586 is therefore inhibition of IGF1, a GAM336586 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336586 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336586 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

CGGCAAC another GAM336586 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336586 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336586 is therefore inhibition of PRND, a GAM336586 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336586 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336587 NPY TAAGATGTTTGCATT Neuropeptide Y (NPY, Accession NM_000905.2) is a GAM336587 A A
TCAGCAC target gene. NPY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NPY BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336587 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336587 is therefore inhibition of NPY, a GAM336587 target gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336587 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NPY.The function of NPY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM193.

GAM336588 NPY TAAGATGTTTGCATT Neuropeptide Y (NPY, Accession NM_000905.2) is a GAM336588 A A
TCAGCAC target gene. NPY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NPY BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336588 is therefore inhibition of NPY, a GAM336588 target gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336588 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NPY.The function of NPY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM193.

GAM336589 TNF ATCTGCTGTCTTTTA Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A
GAAGTGG Accession NM_000594.2) is a GAM336589 target gene. TNF BINDING SITE is a target binding site found in the 5` untranslated region of mRNA

encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336589 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336589 is therefore inhibition of TNF, a GAM336589 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM336589 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336590 APBB2 CAAGTGCTTGAACAT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GGCAGAG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336590 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336590 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336590 is therefore inhibition of APBB2, a GAM336590 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336590 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336590 CAV1 CAAGTGCTTGAACAT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
GGCAGAG NM_001753.3) is another GAM336590 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336590 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336590 is therefore inhibition of CAV1, a GAM336590 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336590 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336590 PRND CAAGTGCTTGAACAT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGCAGAG another GAM336590 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336590 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336590 is therefore inhibition of PRND, a GAM336590 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336590 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336591 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336591 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336591 is therefore inhibition of APP. Accordingly, utilities of GAM336591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336592 DHCR24 TGAGAGAGGAAGGCC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GTAGGGA NM_014762.1) is a GAM336592 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336592 is therefore inhibition of DHCR24, a GAM336592 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336592 IL1A TGAGAGAGGAAGGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

GTAGGGA GAM336592 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336592 is therefore inhibition of IL1A, a GAM336592 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336592 TNF TGAGAGAGGAAGGCC Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

GTAGGGA Accession NM_000594.2) is another GAM336592 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336592 is therefore inhibition of TNF, a GAM336592 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM336592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336593 ADAM17 TTTGCACACTTTCCA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

AGTTGCC factor, (ADAM17, Accession NM_003183.3) is a GAM336593 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336593 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336593 is therefore inhibition of ADAM17, a GAM336593 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336593 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336593 B2M TTTGCACACTTTCCA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another A A
AGTTGCC GAM336593 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336593 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336593 is therefore inhibition of B2M, a GAM336593 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336593 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM336593 CTNND2 TTTGCACACTTTCCA Catenin (cadherin- associated protein), Delta 2 (neural A A
AGTTGCC plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM336593 target gene. CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CTNND2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336593 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336593 is therefore inhibition of CTNND2, a GAM336593 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336593 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM550.

GAM336593 IGF1 TTTGCACACTTTCCA AGTTGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336593 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336593 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336593 is therefore inhibition of IGF1, a GAM336593 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336593 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336593 PRNP TTTGCACACTTTCCA AGTTGCC Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM336593 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336593 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336593 is therefore inhibition of PRNP, a GAM336593 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336593 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336594 ADAM17 TTTGCACACTTTCCA AGTTGCC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_003183.3) is a GAM336594 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure A A

complementarity to the nucleotide sequence of GAM336594 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336594 is therefore inhibition of ADAM17, a GAM336594 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336594 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336594 B2M TTTGCACACTTTCCA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another A A
AGTTGCC GAM336594 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336594 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336594 is therefore inhibition of B2M, a GAM336594 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336594 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM336594 CTNND2 TTTGCACACTTTCCA Catenin (cadherin- associated protein), Delta 2 (neural A A
AGTTGCC plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM336594 target gene. CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CTNND2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336594 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336594 is therefore inhibition of CTNND2, a GAM336594 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336594 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM550.

GAM336594 IGF1 TTTGCACACTTTCCA AGTTGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336594 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336594 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336594 is therefore inhibition of IGF1, a GAM336594 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336594 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336594 PRNP TTTGCACACTTTCCA AGTTGCC Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM336594 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336594 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336594 is therefore inhibition of PRNP, a GAM336594 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336594 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336595 APBB2 ATGGTGTAGGTGAAG AGAACAT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336595 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide A A

sequence of GAM336595 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336595 is therefore inhibition of APBB2, a GAM336595 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336595 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336595 BACE ATGGTGTAGGTGAAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

AGAACAT is another GAM336595 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336595 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336595 is therefore inhibition of BACE, a GAM336595 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336595 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336595 IL1A ATGGTGTAGGTGAAG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

AGAACAT GAM336595 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336595 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336595 is therefore inhibition of IL1A, a GAM336595 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336595 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336596 APBB2 ATGGTGTAGGTGAAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
AGAACAT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336596 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336596 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336596 is therefore inhibition of APBB2, a GAM336596 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336596 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336596 BACE ATGGTGTAGGTGAAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A
AGAACAT is another GAM336596 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336596 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336596 is therefore inhibition of BACE, a GAM336596 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336596 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336596 IL1A ATGGTGTAGGTGAAG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
AGAACAT GAM336596 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336596 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336596 is therefore inhibition of IL1A, a GAM336596 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336596 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336597 ARHA CTGAATGTAATCTTA Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A GTTGTAA is a GAM336597 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336597 is therefore inhibition of ARHA, a GAM336597 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336597 CTNND2 CTGAATGTAATCTTA Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM336597 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336597 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A GTTGTAA

Another function of GAM336597 is therefore inhibition of CTNND2, a GAM336597 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336597 LRP1 CTGAATGTAATCTTA Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
GTTGTAA macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM336597 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336597 is therefore inhibition of LRP1, a GAM336597 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM336598 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336598 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336598 is therefore inhibition of APP. Accordingly, utilities of GAM336598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336599 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336599 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336599 is therefore inhibition of APPBP2, a GAM336599 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336599 BACE2 CATTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336599 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336599 is therefore inhibition of BACE2, a GAM336599 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336599 FHL2 CATTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336599 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336599 is therefore inhibition of FHL2, a GAM336599 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336599 HD CATTGCACTCCAGCC A A TGGGCAA HD (Accession NM_002111.3) is another GAM336599 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336599 is therefore inhibition of HD. Accordingly, utilities of GAM336599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336599 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336599 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336599 is therefore inhibition of IGF1, a GAM336599 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336599 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336599 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336599 is therefore inhibition of PRND, a GAM336599 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336600 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336600 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336600 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336600 is therefore inhibition of APPBP2, a GAM336600 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336600 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336600 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM336600 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336600 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336600 is therefore inhibition of BACE2, a GAM336600 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336600 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336600 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336600 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336600 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336600 is therefore inhibition of FHL2, a GAM336600 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336600 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336600 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336600 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336600 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336600 is therefore inhibition of HD. Accordingly, utilities of GAM336600 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336600 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336600 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336600 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336600 is therefore inhibition of IGF1, a GAM336600 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336600 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336600 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336600 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336600 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336600 is therefore inhibition of PRND, a GAM336600 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336600 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336601 ACE TGGAGTAAAATGTCA GGTGTTT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM336601 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336601 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336601 is therefore inhibition of ACE, a GAM336601 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336601 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336602 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336602 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336602 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336602 is therefore inhibition of APPBP2, a GAM336602 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336602 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336602 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336602 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336602 is therefore inhibition of BACE2, a GAM336602 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336602 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336602 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336602 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336602 is therefore inhibition of FHL2, a GAM336602 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336602 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336602 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336602 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336602 is therefore inhibition of IGF1, a GAM336602 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336602 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336602 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336602 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336602 is therefore inhibition of MME, a GAM336602 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336602 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336602 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336602 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336602 is therefore inhibition of PRND, a GAM336602 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336605 PRNP AGGCAGTCTTGATTA Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A
GCTTCTA Strausler- (PRNP, Accession NM_000311.1) is a GAM336605 target gene. PRNP BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336605 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336605 is therefore inhibition of PRNP, a GAM336605 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336605 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336606 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336606 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336606 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336606 is therefore inhibition of APPBP2, a GAM336606 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336606 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336606 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336606 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336606 is therefore inhibition of

BACE2, a GAM336606 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336606 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336606 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336606 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336606 is therefore inhibition of FHL2, a GAM336606 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336606 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336606 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336606 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336606 is therefore inhibition of IGF1, a GAM336606 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336606 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336606 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336606 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336606 is therefore inhibition of MME, a GAM336606 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336606 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336606 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336606 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336606 is therefore inhibition of PRND, a GAM336606 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336607 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336607 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336607 is therefore inhibition of APPBP2, a GAM336607 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336607 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336607 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336607 is therefore inhibition of BACE2, a GAM336607 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336607 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336607 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336607 is therefore inhibition of FHL2, a GAM336607 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336607 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336607 target gene. IGF1 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336607 is therefore inhibition of IGF1, a GAM336607 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336607 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336607 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336607 is therefore inhibition of MME, a GAM336607 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336607 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336607 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336607 is therefore inhibition of PRND, a GAM336607 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336608 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336608 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336608 is therefore inhibition of APPBP2, a GAM336608 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336608 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336608 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336608 is therefore inhibition of BACE2, a GAM336608 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336608 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336608 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336608 is therefore inhibition of FHL2, a GAM336608 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336608 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336608 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336608 is therefore inhibition of IGF1, a GAM336608 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336608 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336608 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336608 is therefore inhibition of MME, a GAM336608 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM336608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336608 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336608 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336608 is therefore inhibition of PRND, a GAM336608 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336609 BACE AACACGTTGCATCTG Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

TGTCTCT is a GAM336609 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336609 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336609 is therefore inhibition of BACE, a GAM336609 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336609 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336610 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336610 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336610 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336610 is therefore inhibition of APPBP2, a GAM336610 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336610 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336610 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336610 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336610 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336610 is therefore inhibition of BACE2, a GAM336610 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336610 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336610 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336610 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336610 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336610 is therefore inhibition of FHL2, a GAM336610 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336610 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336610 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336610 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336610 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336610 is therefore inhibition of IGF1, a GAM336610 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336610 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336610 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336610 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336610 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336610 is therefore inhibition of MME, a GAM336610 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336610 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336610 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336610 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING A A

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336610 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336610 is therefore inhibition of PRND, a GAM336610 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336610 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336611 TNFRSF6 TGTGTTTGAACACCT TNFRSF6 (Accession NM_152876.1) is a GAM336611 target gene. A A

TGGTCAC TNFRSF6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336611 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336611 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336611 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336614 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336614 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336614 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336614 is therefore inhibition of APP. Accordingly, utilities of GAM336614 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336615 ADAMTS5 GTGTTATTAATAAAC A Disintegrin- like and Metalloprotease (reprolysin type) with A A

TCTTTTT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336615 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336615 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336615 is therefore inhibition of ADAMTS5, a GAM336615 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336615 IGF1 GTGTTATTAATAAAC TCTTTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336615 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336615 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336615 is therefore inhibition of IGF1, a GAM336615 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336617 APPBP2 ACTGCACTCCAGCCT GGCAACA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336617 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336617 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336617 is therefore inhibition of APPBP2, a GAM336617 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336617 HD ACTGCACTCCAGCCT HD (Accession NM_002111.3) is another GAM336617 target gene. HD A A

GGCAACA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336617 is therefore inhibition of HD. Accordingly, utilities of GAM336617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336617 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGCAACA NM_000618.2) is another GAM336617 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336617 is therefore inhibition of IGF1, a GAM336617 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336617 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGCAACA another GAM336617 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336617 is therefore inhibition of PRND, a GAM336617 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336618 DLST TTTGTGTCCTGACCC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A
A
AGAGGAC oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336618 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336618 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336618 is therefore inhibition of DLST, a GAM336618 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336618 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336619 DLST TTTGTGTCCTGACCC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A
A
AGAGGAC oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336619 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336619 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336619 is therefore inhibition of DLST, a GAM336619 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336619 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336620 DLST TTTGTGTCCTGACCC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A
A
AGAGGAC oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336620 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336620 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336620 is therefore inhibition of DLST, a GAM336620 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336620 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336621 GFAP TAGCAGCAGGAGCAG GFAP (Accession NM_002055.2) is a GAM336621 target gene. GFAP A A

GTAACAT BINDING SITE1 through GFAP BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 through GFAP BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336621 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336621 is therefore inhibition of GFAP. Accordingly, utilities of GAM336621 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336621 MME TAGCAGCAGGAGCAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GTAACAT enkephalinase, (MME, Accession NM_007288.1) is another GAM336621 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336621 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336621 is therefore inhibition of MME, a GAM336621 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336621 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336621 PSEN1 TAGCAGCAGGAGCAG PSEN1 (Accession NM_007318.1) is another GAM336621 target gene. A A

GTAACAT PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336621 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336621 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336621 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336622 MAPT AAGAGGTAGTGTAAG Microtubule- associated Protein Tau (MAPT, Accession A A GAATTGT NM_016841.1) is a GAM336622 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336622 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336622 is therefore inhibition of MAPT, a GAM336622 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336622 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336626 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336626 target gene. APP A A GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336626 is therefore inhibition of APP. Accordingly, utilities of GAM336626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336628 IGF1 CCAGGCAACTGTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A TTTTAAG NM_000618.2) is a GAM336628 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336628 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336628 is therefore inhibition of IGF1, a GAM336628 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336628 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336629 IGF1 CCAGGCAACTGTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TTTTAAG NM_000618.2) is a GAM336629 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336629 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336629 is therefore inhibition of IGF1, a GAM336629 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336629 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336630 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336630 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336630 is therefore inhibition of APPBP2, a GAM336630 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336630 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336630 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336630 is therefore inhibition of BACE2, a GAM336630 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336630 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336630 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336630 is therefore inhibition of FHL2, a GAM336630 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336630 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336630 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336630 is therefore inhibition of IGF1, a GAM336630 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336630 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336630 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336630 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336630 is therefore inhibition of MME, a GAM336630 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336630 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336630 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336630 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336630 is therefore inhibition of PRND, a GAM336630 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336631 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336631 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target A A

binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336631 is therefore inhibition of APPBP2, a GAM336631 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336631 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336631 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336631 is therefore inhibition of BACE2, a GAM336631 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336631 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336631 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336631 is therefore inhibition of FHL2, a GAM336631 target gene which Contains four LIM domains and an

additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336631 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336631 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336631 is therefore inhibition of IGF1, a GAM336631 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336631 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336631 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336631 is therefore inhibition of MME, a GAM336631 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336631 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336631 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336631 is therefore inhibition of PRND, a GAM336631 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336632 GSN TAATTTCCTGGTAGT GSN (Accession NM_000177.2) is a GAM336632 target gene. GSN A A

GATGACA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GSN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GSN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336632 is therefore inhibition of GSN. Accordingly, utilities of GAM336632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GSN.

GAM336633 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336633 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336633 is therefore inhibition of APPBP2, a GAM336633 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336633 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336633 target gene. A A

TGGGCGA CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336633 is therefore inhibition of CTSB. Accordingly, utilities of GAM336633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336633 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336633 target gene. A A

TGGGCGA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336633 is therefore inhibition of CTSK. Accordingly, utilities of GAM336633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336633 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCGA another GAM336633 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336633 is therefore inhibition of FHL2, a GAM336633 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336633 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCGA NM_000618.2) is another GAM336633 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336633 is therefore inhibition of IGF1, a GAM336633 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336633 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCGA another GAM336633 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336633 is therefore inhibition of PRND, a GAM336633 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336634 ACE TGGGCTCATTTTGCA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
GTGATTT (ACE, Accession NM_152831.1) is a GAM336634 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336634 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336634 is therefore inhibition of ACE, a GAM336634 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336634 GSN TGGGCTCATTTTGCA GSN (Accession NM_000177.2) is another GAM336634 target gene. A A

GTGATTT GSN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GSN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GSN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336634 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336634 is therefore inhibition of GSN. Accordingly, utilities of GAM336634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GSN.

GAM336637 FPRL1 GGGCGTGATGTCAGC FPRL1 (Accession NM_001462.1) is a GAM336637 target gene. FPRL1 A A

CAGAGTC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336637 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336637 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336637 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336637 IL1A GGGCGTGATGTCAGC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

CAGAGTC GAM336637 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336637 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336637 is therefore inhibition of IL1A, a GAM336637 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336637 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336638 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336638 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336638 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336638 is therefore inhibition of APP. Accordingly, utilities of GAM336638 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336639 ADAMTS5 ATTCAAGATAAGGGT A Disintegrin- like and Metalloprotease (reprolysin type) with A A

CTGGGAG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336639 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336639 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336639 is therefore inhibition of ADAMTS5, a GAM336639 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336639 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336639 BACE2 ATTCAAGATAAGGGT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

CTGGGAG NM_138992.1) is another GAM336639 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336639 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336639 is therefore inhibition of BACE2, a GAM336639 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336639 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336640 BACE TGGAATGAGGAAGGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

TGTGGTC is a GAM336640 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336640 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336640 is therefore inhibition of BACE, a GAM336640 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336640 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336640 TNF TGGAATGAGGAAGGG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

TGTGGTC Accession NM_000594.2) is another GAM336640 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336640 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336640 is therefore inhibition of TNF, a GAM336640 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM336640 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336642 MAPT GTGAGGCAGGAACCC Microtubule- associated Protein Tau (MAPT, Accession A A

CAAAGCC NM_173727.1) is a GAM336642 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336642 RNA are set forth in Tables 6 and 7, hereby incorporated

herein.

A function of GAM336642 is therefore inhibition of MAPT, a GAM336642 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336642 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336642 PSEN2 GTGAGGCAGGAACCC PSEN2 (Accession NM_012486.1) is another GAM336642 target gene. A A

CAAAGCC PSEN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336642 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336642 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336642 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336643 MAPT GTGAGGCAGGAACCC Microtubule- associated Protein Tau (MAPT, Accession A A

CAAAGCC NM_173727.1) is a GAM336643 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336643 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336643 is therefore inhibition of MAPT, a GAM336643 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336643 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336643 PSEN2 GTGAGGCAGGAACCC PSEN2 (Accession NM_012486.1) is another GAM336643 target gene. A A

CAAAGCC PSEN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336643 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336643 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336643 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336646 DLST AGGCCTTTTTGGGAA Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GAGACAG oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336646 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336646 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336646 is therefore inhibition of DLST, a GAM336646 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336646 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336646 GFAP AGGCCTTTTTGGGAA GFAP (Accession NM_002055.2) is another GAM336646 target gene. A A

GAGACAG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336646 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336646 is therefore inhibition of GFAP. Accordingly, utilities of GAM336646 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336646 HD AGGCCTTTTTGGGAA HD (Accession NM_002111.3) is another GAM336646 target gene. HD A A

GAGACAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336646

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336646 is therefore inhibition of HD. Accordingly, utilities of GAM336646 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336646 MME AGGCCTTTTTGGGAA Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GAGACAG enkephalinase, (MME, Accession NM_007288.1) is another GAM336646 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336646 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336646 is therefore inhibition of MME, a GAM336646 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336646 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336651 ABCD1 AGGCAGGTGGGTGTA ABCD1 (Accession NM_000033.2) is a GAM336651 target gene. ABCD1 A A
TGGGTCT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336651 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336651 is therefore inhibition of ABCD1. Accordingly, utilities of GAM336651 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM336651 APBA2 AGGCAGGTGGGTGTA Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
TGGGTCT 2 (X11- l (APBA2, Accession NM_005503.2) is another GAM336651 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336651 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336651 is therefore inhibition of

APBA2, a GAM336651 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336651 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336651 DHCR24 AGGCAGGTGGGTGTA A A TGGGTCT 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM336651 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336651 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336651 is therefore inhibition of DHCR24, a GAM336651 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336651 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336651 FOS AGGCAGGTGGGTGTA A A TGGGTCT V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, Accession NM_005252.2) is another GAM336651 target gene. FOS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336651 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336651 is therefore inhibition of FOS, a GAM336651 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336651 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336651 GLUL AGGCAGGTGGGTGTA A A TGGGTCT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession NM_002065.3) is another GAM336651 target gene. GLUL BINDING SITE is

a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336651 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336651 is therefore inhibition of GLUL, a GAM336651 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336651 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336651 HD AGGCAGGTGGGTGTA HD (Accession NM_002111.3) is another GAM336651 target gene. HD A A

TGGGTCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336651 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336651 is therefore inhibition of HD. Accordingly, utilities of GAM336651 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336652 ACE GAGGTTTGAGCCTTC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TCCTGCT (ACE, Accession NM_152831.1) is a GAM336652 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336652 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336652 is therefore inhibition of ACE, a GAM336652 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336652 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336652 CASP3 GAGGTTTGAGCCTTC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

TCCTGCT Accession NM_032991.1) is another GAM336652 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336652 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336652 is therefore inhibition of CASP3, a GAM336652 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336652 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336652 CRAT GAGGTTTGAGCCTTC Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is A A

TCCTGCT another GAM336652 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336652 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336652 is therefore inhibition of CRAT, a GAM336652 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336652 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336652 IAPP GAGGTTTGAGCCTTC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

TCCTGCT another GAM336652 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336652 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336652 is therefore inhibition of IAPP, a GAM336652 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore

is associated with Alzheimer. Accordingly, utilities of GAM336652 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336652 NGB GAGGTTTGAGCCTTC TCCTGCT A A Neuroglobin (NGB, Accession NM_021257.2) is another GAM336652 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336652 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336652 is therefore inhibition of NGB, a GAM336652 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336652 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336653 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336653 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336653 is therefore inhibition of APPBP2, a GAM336653 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336653 BACE2 ACTGCACTCCAGCCT GGGCAAC A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336653 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336653 is therefore inhibition of BACE2, a GAM336653 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336653 FHL2 A ACTGCACTCCAGCCT A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336653 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336653 is therefore inhibition of FHL2, a GAM336653 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336653 IGF1 A ACTGCACTCCAGCCT A GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336653 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336653 is therefore inhibition of IGF1, a GAM336653 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336653 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336653 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336653 is therefore inhibition of MME, a GAM336653 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336653 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336653 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336653 is therefore inhibition of PRND, a GAM336653 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336656 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336656 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM336656 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336656 is therefore inhibition of APP. Accordingly, utilities of GAM336656 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336657 APBB2 CTAGCACAGTGCTTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A GCACACA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336657 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336657 is therefore inhibition of APBB2, a GAM336657 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336657 NGB CTAGCACAGTGCTTG Neuroglobin (NGB, Accession NM_021257.2) is another GAM336657 A A GCACACA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336657 is therefore inhibition of NGB, a GAM336657 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336657 PLAU CTAGCACAGTGCTTG Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A GCACACA is another GAM336657 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336657 is therefore inhibition of PLAU, a GAM336657 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM336657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336658 ADAMTS5 AGGGCACACGTCTCT A Disintegrin- like and Metalloprotease (reprolysin type) with A A
CTGAATT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336658 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336658 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336658 is therefore inhibition of ADAMTS5, a GAM336658 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336658 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336658 IGF1 AGGGCACACGTCTCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CTGAATT NM_000618.2) is another GAM336658 target gene. IGF1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336658 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336658 is therefore inhibition of IGF1, a GAM336658 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336658 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336659 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336659 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336659 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336659 is therefore inhibition of APPBP2, a GAM336659 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336659 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336659 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336659 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336659 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336659 is therefore inhibition of BACE2, a GAM336659 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336659 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336659 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336659 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA A A

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336659 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336659 is therefore inhibition of FHL2, a GAM336659 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336659 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336659 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336659 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336659 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336659 is therefore inhibition of IGF1, a GAM336659 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336659 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336659 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336659 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336659 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336659 is therefore inhibition of MME, a GAM336659 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM336659 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336659 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336659 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336659 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336659 is therefore inhibition of PRND, a GAM336659 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336659 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336660 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336660 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336660 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336660 is therefore inhibition of APP. Accordingly, utilities of GAM336660 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336661 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336661 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336661 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336661 is therefore inhibition of APPBP2, a GAM336661 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336661 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336661 BACE2 CATTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336661 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336661 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336661 is therefore inhibition of BACE2, a GAM336661 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336661 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336661 FHL2 CATTGCACTCCAGCC TGGGCAA A A Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336661 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336661 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336661 is therefore inhibition of FHL2, a GAM336661 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336661 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336661 HD CATTGCACTCCAGCC HD A A TGGGCAA HD (Accession NM_002111.3) is another GAM336661 target gene. BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336661 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336661 is therefore inhibition of HD. Accordingly, utilities of GAM336661 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336661 IGF1 CATTGCACTCCAGCC A A TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336661 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336661 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336661 is therefore inhibition of IGF1, a GAM336661 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336661 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336661 PRND CATTGCACTCCAGCC A A TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336661 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336661 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336661 is therefore inhibition of PRND, a GAM336661 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336661 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336662 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336662 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336662 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336662 is therefore inhibition of APPBP2, a GAM336662 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336662 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336662 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336662 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336662 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336662 is therefore inhibition of BACE2, a GAM336662 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336662 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336662 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336662 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336662 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336662 is therefore inhibition of FHL2, a GAM336662 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336662 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336662 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336662 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336662 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336662 is therefore inhibition of HD. Accordingly, utilities of GAM336662 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336662 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336662 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336662 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336662 is therefore inhibition of IGF1, a GAM336662 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336662 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336662 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336662 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336662 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336662 is therefore inhibition of PRND, a GAM336662 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336662 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336663 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336663 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336663 is therefore inhibition of APPBP2, a GAM336663 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336663 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336663 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336663 is therefore inhibition of BACE2, a GAM336663 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336663 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336663 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336663 is therefore inhibition of FHL2, a GAM336663 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336663 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336663 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336663 is therefore inhibition of HD. Accordingly, utilities of GAM336663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336663 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336663 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336663 is therefore inhibition of IGF1, a GAM336663 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336663 PRND CATTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336663 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336663 is therefore inhibition of PRND, a GAM336663 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336664 APPBP2 CATTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336664 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336664 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336664 is therefore inhibition of APPBP2, a GAM336664 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336664 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336664 BACE2 CATTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336664 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336664 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336664 is therefore inhibition of BACE2, a GAM336664 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336664 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336664 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336664 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336664 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336664 is therefore inhibition of FHL2, a GAM336664 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336664 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336664 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336664 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336664 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336664 is therefore inhibition of HD. Accordingly, utilities of GAM336664 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336664 IGF1 A A CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession

TGGGCAA NM_000618.2) is another GAM336664 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336664 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336664 is therefore inhibition of IGF1, a GAM336664 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336664 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336664 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336664 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336664 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336664 is therefore inhibition of PRND, a GAM336664 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336664 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336665 BACE2 TGTGATAGTTCTTTT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGAGGC NM_138991.1) is a GAM336665 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336665 is therefore inhibition of BACE2,

a GAM336665 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336665 CAV1 TGTGATAGTTCTTTT GGAGGC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM336665 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336665 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336665 is therefore inhibition of CAV1, a GAM336665 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336669 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM336669 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336669 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336669 is therefore inhibition of APP. Accordingly, utilities of GAM336669 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336670 FPRL1 GTAAGGCTGGCATTA GGGTGAG FPRL1 (Accession NM_001462.1) is a GAM336670 target gene. FPRL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336670 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336670 is therefore inhibition of FPRL1.

Accordingly, utilities of GAM336670 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336671 FPRL1 GTAAGGCTGGCATTA FPRL1 (Accession NM_001462.1) is a GAM336671 target gene. FPRL1 A A

GGGTGAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336671 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336671 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336671 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336672 FPRL1 GTAAGGCTGGCATTA FPRL1 (Accession NM_001462.1) is a GAM336672 target gene. FPRL1 A A

GGGTGAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336672 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336672 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336672 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336673 ARHA GTTCTGGAGCCCATA Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

CTCACCA is a GAM336673 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336673 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336673 is therefore inhibition of ARHA, a GAM336673 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336673 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336673 AVP GTTCTGGAGCCCATA AVP (Accession NM_000490.2) is another GAM336673 target gene. A A

CTCACCA AVP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336673 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336673 is therefore inhibition of AVP. Accordingly, utilities of GAM336673 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336674 APOC1 TTCCAGTTCTCAGCA Apolipoprotein C- I (APOC1, Accession NM_001645.2) is a A A
CAGCGCT GAM336674 target gene. APOC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APOC1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336674 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336674 is therefore inhibition of APOC1, a GAM336674 target gene which appears to modulate the interaction of apoe with beta- migrating vldl and inhibit binding of beta- vldl to the ldl receptor- related protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336674 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APOC1.The function of APOC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM336674 IL1B TTCCAGTTCTCAGCA Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A
CAGCGCT GAM336674 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336674 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336674 is therefore inhibition of IL1B, a GAM336674 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336674 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM336674 PRNP TTCCAGTTCTCAGCA Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A
CAGCGCT Strausler- (PRNP, Accession NM_000311.1) is another GAM336674 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336674 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336674 is therefore inhibition of PRNP, a GAM336674 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336674 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336675 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGTGAC a GAM336675 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336675 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336675 is therefore inhibition of FHL2, a GAM336675 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336675 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336675 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGTGAC NM_000618.2) is another GAM336675 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336675 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336675 is therefore inhibition of IGF1, a GAM336675 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336675 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336675 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTGAC another GAM336675 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336675 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336675 is therefore inhibition of PRND, a GAM336675 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336675 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336676 ADAM17 CCAAAGTGCTGGCGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TACAGGT factor, (ADAM17, Accession NM_021832.1) is a GAM336676 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336676 is therefore inhibition of ADAM17, a GAM336676 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336676 APPBP2 CCAAAGTGCTGGCGT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TACAGGT Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336676 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of APPBP2, a GAM336676 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336676 CTSK CCAAAGTGCTGGCGT CTSK (Accession NM_000396.2) is another GAM336676 target gene. A A

TACAGGT CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of CTSK. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336676 GFAP CCAAAGTGCTGGCGT GFAP (Accession NM_002055.2) is another GAM336676 target gene. A A

TACAGGT GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of GFAP. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336676 HTR2A CCAAAGTGCTGGCGT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

TACAGGT NM_000621.1) is another GAM336676 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of HTR2A, a GAM336676 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336676 IAPP CCAAAGTGCTGGCGT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A TACAGGT another GAM336676 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of IAPP, a GAM336676 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336676 MTNR1A CCAAAGTGCTGGCGT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A TACAGGT another GAM336676 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of MTNR1A, a GAM336676 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The

function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336676 PLAU CCAAAGTGCTGGCGT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1)
A A

TACAGGT is another GAM336676 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of PLAU, a GAM336676 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336676 TGFB1 CCAAAGTGCTGGCGT TGFB1 (Accession NM_000660.1) is another GAM336676 target gene. A A

TACAGGT TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336676 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336676 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336676 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336677 HTR2C ACACTTGTCTGCTTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A

CTACACT NM_000868.1) is a GAM336677 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336677 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336677 is therefore inhibition of HTR2C, a GAM336677 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336677 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336681 APBA2 ACTGCACTCCAGCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGGTGGC 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM336681 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336681 is therefore inhibition of APBA2, a GAM336681 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336681 APLP1 ACTGCACTCCAGCCT Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession A A

GGGTGGC NM_005166.2) is another GAM336681 target gene. APLP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336681 is therefore inhibition of APLP1, a GAM336681 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336681 CRAT ACTGCACTCCAGCCT Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is A A

GGGTGGC another GAM336681 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336681 is therefore inhibition of CRAT, a GAM336681 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336681 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTGGC another GAM336681 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336681 is therefore inhibition of FHL2, a GAM336681 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336681 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTGGC NM_000618.2) is another GAM336681 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336681 is therefore inhibition of IGF1, a GAM336681 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336681 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGTGGC another GAM336681 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336681 is therefore inhibition of PRND, a GAM336681 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336681 PSEN1 ACTGCACTCCAGCCT PSEN1 (Accession NM_007318.1) is another GAM336681 target gene. A A

GGGTGGC PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336681 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336681 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336681 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336683 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336683 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336683 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336683 is therefore inhibition of APPBP2, a GAM336683 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336683 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336683 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336683 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336683 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336683 is therefore inhibition of BACE2, a GAM336683 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336683 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336683 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336683 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336683 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336683 is therefore inhibition of FHL2, a GAM336683 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336683 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336683 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336683 target gene. IGF1 BINDING SITE is A A

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336683 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336683 is therefore inhibition of IGF1, a GAM336683 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336683 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336683 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336683 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336683 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336683 is therefore inhibition of MME, a GAM336683 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336683 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336683 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336683 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336683 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336683 is therefore inhibition of PRND, a GAM336683 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336683 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336685 CRH CTGAATAGAACAGAA Corticotropin Releasing Hormone (CRH, Accession NM_000756.1) is A A

GAGCAGC a GAM336685 target gene. CRH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336685 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336685 is therefore inhibition of CRH, a GAM336685 target gene which regulates the release of corticotropin from pituitary gland. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRH.The function of CRH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1976.

GAM336685 DLST CTGAATAGAACAGAA Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GAGCAGC oxo- glutarat (DLST, Accession NM_001933.2) is another GAM336685 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336685 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336685 is therefore inhibition of DLST, a GAM336685 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336685 IL1B CTGAATAGAACAGAA Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A

GAGCAGC GAM336685 target gene. IL1B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336685 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336685 is therefore inhibition of IL1B, a GAM336685 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM336685 TRPM2 CTGAATAGAACAGAA TRPM2 (Accession NM_003307.1) is another GAM336685 target gene. A A

GAGCAGC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336685 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336685 is therefore inhibition of TRPM2, a GAM336685 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336686 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336686 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336686 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336686 is therefore inhibition of APPBP2, a GAM336686 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336686 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM336686 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM336686 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336686 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336686 is therefore inhibition of BACE2, a GAM336686 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336686 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336686 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336686 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336686 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336686 is therefore inhibition of FHL2, a GAM336686 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336686 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336686 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336686 target gene. HD A A
TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336686 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336686 is therefore inhibition of HD. Accordingly, utilities of GAM336686 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336686 IGF1 CATTGCACTCCAGCC A A TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336686 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336686 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336686 is therefore inhibition of IGF1, a GAM336686 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336686 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336686 PRND CATTGCACTCCAGCC A A TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336686 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336686 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336686 is therefore inhibition of PRND, a GAM336686 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336686 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336689 DSCR1 GGCACCATCTCAGCT A A CACTGGA Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM336689 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336689 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336689 is therefore inhibition of DSCR1, a GAM336689 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336689 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM336689 HD GGCACCATCTCAGCT HD (Accession NM_002111.3) is another GAM336689 target gene. HD A A

CACTGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336689 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336689 is therefore inhibition of HD. Accordingly, utilities of GAM336689 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336689 MPO GGCACCATCTCAGCT Myeloperoxidase (MPO, Accession NM_000250.1) is another A A

CACTGGA GAM336689 target gene. MPO BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336689 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336689 is therefore inhibition of MPO, a GAM336689 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336689 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM336690 ACE TTGCCTAGGCCGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TGCAGTG (ACE, Accession NM_152831.1) is a GAM336690 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336690 is therefore inhibition of ACE, a GAM336690 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336690 IAPP TTGCCTAGGCCGGAG A A TGCAGTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM336690 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336690 is therefore inhibition of IAPP, a GAM336690 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336690 SNCB TTGCCTAGGCCGGAG A A TGCAGTG Synuclein, Beta (SNCB, Accession NM_003085.2) is another GAM336690 target gene. SNCB BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336690 is therefore inhibition of SNCB, a GAM336690 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336691 IGF1 CAGAGAGGTTCAATG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCTTACT NM_000618.2) is a GAM336691 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336691 is therefore inhibition of IGF1, a GAM336691 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336697 FHL2 ACTGTACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGTGAC a GAM336697 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336697 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336697 is therefore inhibition of FHL2, a GAM336697 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336697 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336697 IGF1 ACTGTACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGTGAC NM_000618.2) is another GAM336697 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336697 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336697 is therefore inhibition of IGF1, a GAM336697 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336697 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336697 PRND ACTGTACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTGAC another GAM336697 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336697 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336697 is therefore inhibition of PRND, a GAM336697 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336697 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336699 CASP3 GCCTCAGTTGTGGCC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A
AGGGATT Accession NM_004346.2) is a GAM336699 target gene. CASP3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336699 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336699 is therefore inhibition of CASP3, a GAM336699 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336699 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336701 ADAMTS5 ATGGATATTTTTGAT A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GCCCAGA Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336701 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336701 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336701 is therefore inhibition of ADAMTS5, a GAM336701 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336701 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336701 TNFRSF6 ATGGATATTTTTGAT TNFRSF6 (Accession NM_152876.1) is another GAM336701 target A A

GCCCAGA gene. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336701 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336701 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336701 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336702 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336702 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336702 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336702 is therefore inhibition of APP. Accordingly, utilities of GAM336702 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336703 APPBP2 CACTGCACTCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGTGAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336703 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336703 is therefore inhibition of APPBP2, a GAM336703 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336703 FHL2 CACTGCACTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTGAC another GAM336703 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336703 is therefore inhibition of FHL2, a GAM336703 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336703 IGF1 CACTGCACTCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTGAC NM_000618.2) is another GAM336703 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336703 is therefore inhibition of IGF1, a GAM336703 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336703 PRND CACTGCACTCAGCCT GGGTGAC A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336703 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336703 is therefore inhibition of PRND, a GAM336703 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336704 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336704 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336704 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336704 is therefore inhibition of APPBP2, a GAM336704 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336704 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336704 BACE2 ACTGCACTCCAGCCT GGGCAAC A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336704 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336704 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336704 is therefore inhibition of BACE2, a GAM336704 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336704 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336704 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336704 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336704 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336704 is therefore inhibition of FHL2, a GAM336704 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336704 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336704 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336704 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336704 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336704 is therefore inhibition of IGF1, a GAM336704 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336704 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336704 MME ACTGCACTCCAGCCT GGGCAAC A A

Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336704 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336704 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336704 is therefore inhibition of MME, a GAM336704 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336704 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336704 PRND ACTGCACTCCAGCCT GGGCAAC A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336704 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336704 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336704 is therefore inhibition of PRND, a GAM336704 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336704 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336705 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336705 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and

secondary structure complementarity to the nucleotide sequence of GAM336705 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336705 is therefore inhibition of APPBP2, a GAM336705 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336705 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336705 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A GGGCAAC NM_012105.3) is another GAM336705 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336705 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336705 is therefore inhibition of BACE2, a GAM336705 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336705 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336705 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A GGGCAAC another GAM336705 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336705 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336705 is therefore inhibition of FHL2, a GAM336705 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336705 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336705 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336705 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336705 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336705 is therefore inhibition of IGF1, a GAM336705 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336705 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336705 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336705 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336705 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336705 is therefore inhibition of MME, a GAM336705 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336705 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336705 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336705 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide

sequence of GAM336705 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336705 is therefore inhibition of PRND, a GAM336705 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336705 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336706 NCSTN TCCAGTGATTCATTT NCSTN (Accession NM_015331.1) is a GAM336706 target gene. NCSTN A A

GGTTGTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336706 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336706 is therefore inhibition of NCSTN, a GAM336706 target gene which has a central role in presenilin-mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp- 1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336706 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336707 AVP TGTGGCAGAAGGCTC AVP (Accession NM_000490.2) is a GAM336707 target gene. AVP A A

TGGATTA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336707 is therefore inhibition of AVP. Accordingly, utilities of GAM336707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336707 BACE TGTGGCAGAAGGCTC Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

TGGATTA is another GAM336707 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and

secondary structure complementarity to the nucleotide sequence of GAM336707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336707 is therefore inhibition of BACE, a GAM336707 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336707 DHCR24 TGTGGCAGAAGGCTC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGGATTA NM_014762.1) is another GAM336707 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336707 is therefore inhibition of DHCR24, a GAM336707 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336709 APBB2 ACAGCAGTCCAGCCT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GGGTGAC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336709 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336709 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336709 is therefore inhibition of APBB2, a GAM336709 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336709 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM44.

GAM336709 FHL2 ACAGCAGTCCAGCCT GGGTGAC A A

Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336709 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336709 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336709 is therefore inhibition of FHL2, a GAM336709 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336709 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336709 IGF1 ACAGCAGTCCAGCCT GGGTGAC A A

Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336709 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336709 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336709 is therefore inhibition of IGF1, a GAM336709 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336709 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336710 CAV1 GGCAAAAAAATAGAG CAGAGGG A A

Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM336710 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336710 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336710 is therefore inhibition of CAV1, a GAM336710 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336710 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336710 IGF1 GGCAAAAAAATAGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CAGAGGG NM_000618.2) is another GAM336710 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336710 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336710 is therefore inhibition of IGF1, a GAM336710 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336710 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336713 MME TGGGAAACATCCAGC Membrane Metallo- endopeptidase (neutral endopeptidase, A A

ACATACT enkephalinase, (MME, Accession NM_000902.2) is a GAM336713 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336713 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336713 is therefore inhibition of MME, a GAM336713 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336713 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336713 PRND TGGGAAACATCCAGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

ACATACT another GAM336713 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336713 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336713 is therefore inhibition of PRND, a GAM336713 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336713 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336715 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336715 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336715 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336715 is therefore inhibition of APPBP2, a GAM336715 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336715 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336715 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336715 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336715 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336715 is therefore inhibition of

BACE2, a GAM336715 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336715 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336715 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336715 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336715 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336715 is therefore inhibition of FHL2, a GAM336715 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336715 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336715 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336715 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336715 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336715 is therefore inhibition of HD. Accordingly, utilities of GAM336715 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336715 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336715 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336715 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336715 is therefore inhibition of IGF1, a GAM336715 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336715 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336715 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336715 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336715 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336715 is therefore inhibition of PRND, a GAM336715 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336715 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336716 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336716 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336716 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336716 is therefore inhibition of APPBP2, a GAM336716 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336716 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM336716 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM336716 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336716 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336716 is therefore inhibition of BACE2, a GAM336716 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336716 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336716 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336716 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336716 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336716 is therefore inhibition of FHL2, a GAM336716 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336716 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336716 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336716 target gene. HD A A
TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336716 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336716 is therefore inhibition of HD. Accordingly, utilities of GAM336716 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336716 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336716 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336716 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336716 is therefore inhibition of IGF1, a GAM336716 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336716 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336716 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336716 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336716 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336716 is therefore inhibition of PRND, a GAM336716 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336716 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336717 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336717 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336717 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336717 is therefore inhibition of APPBP2, a GAM336717 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336717 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336717 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336717 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336717 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336717 is therefore inhibition of BACE2, a GAM336717 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336717 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336717 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336717 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336717 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336717 is therefore inhibition of FHL2, a GAM336717 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336717 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336717 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336717 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336717 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336717 is therefore inhibition of HD. Accordingly, utilities of GAM336717 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336717 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336717 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336717 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336717 is therefore inhibition of IGF1, a GAM336717 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336717 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336717 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336717 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336717 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336717 is therefore inhibition of

PRND, a GAM336717 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336717 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336718 ACE TGTGAAGGAGGAAGG GAGGAGC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM336718 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336718 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336718 is therefore inhibition of ACE, a GAM336718 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336718 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336718 ACHE TGTGAAGGAGGAAGG GAGGAGC Acetylcholinesterase (YT blood group) (ACHE, Accession NM_015831.1) is another GAM336718 target gene. ACHE BINDING SITE1 and ACHE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ACHE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE1 and ACHE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336718 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336718 is therefore inhibition of ACHE, a GAM336718 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336718 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM336718 BLMH TGTGAAGGAGGAAGG GAGGAGC Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is another GAM336718 target gene. BLMH BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336718 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336718 is therefore inhibition of BLMH, a GAM336718 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM336718 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM336718 CAV1 TGTGAAGGAGGAAGG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
GAGGAGC NM_001753.3) is another GAM336718 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336718 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336718 is therefore inhibition of CAV1, a GAM336718 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336718 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336718 DHCR24 TGTGAAGGAGGAAGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A
GAGGAGC NM_014762.1) is another GAM336718 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336718 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336718 is therefore inhibition of DHCR24, a GAM336718 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336718 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336718 MME TGTGAAGGAGGAAGG GAGGAGC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336718 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336718 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336718 is therefore inhibition of MME, a GAM336718 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336718 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336719 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336719 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336719 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336719 is therefore inhibition of APPBP2, a GAM336719 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336719 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336719 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336719 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or A A

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336719 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336719 is therefore inhibition of BACE2, a GAM336719 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336719 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336719 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336719 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336719 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336719 is therefore inhibition of FHL2, a GAM336719 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336719 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336719 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336719 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336719 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336719 is therefore inhibition of HD. Accordingly, utilities of GAM336719 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336719 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336719 target gene. IGF1 BINDING SITE1

and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336719 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336719 is therefore inhibition of IGF1, a GAM336719 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336719 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336719 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336719 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336719 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336719 is therefore inhibition of PRND, a GAM336719 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336719 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336720 CTSB TGCACCACTGCACTC CTSB (Accession NM_147782.1) is a GAM336720 target gene. CTSB A A

TAACCTG BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336720 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336720 is therefore inhibition of CTSB. Accordingly, utilities of GAM336720 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with CTSB.

GAM336720 FHL2 TGCACCACTGCACTC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TAACCTG another GAM336720 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336720 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336720 is therefore inhibition of FHL2, a GAM336720 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336720 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336720 IGF1 TGCACCACTGCACTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TAACCTG NM_000618.2) is another GAM336720 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336720 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336720 is therefore inhibition of IGF1, a GAM336720 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336720 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336720 PRND TGCACCACTGCACTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TAACCTG another GAM336720 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336720 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336720 is therefore inhibition of PRND, a GAM336720 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336720 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336722 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336722 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336722 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336722 is therefore inhibition of APP. Accordingly, utilities of GAM336722 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336723 APPBP2 TTGCACTCCAGCCTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGTGACA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336723 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336723 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336723 is therefore inhibition of APPBP2, a GAM336723 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336723 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336723 FHL2 TTGCACTCCAGCCTG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGTGACA another GAM336723 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336723 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336723 is therefore inhibition of FHL2, a GAM336723 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336723 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336723 IGF1 TTGCACTCCAGCCTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGTGACA NM_000618.2) is another GAM336723 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336723 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336723 is therefore inhibition of IGF1, a GAM336723 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336723 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336723 PRND TTGCACTCCAGCCTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGTGACA another GAM336723 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336723 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336723 is therefore inhibition of PRND, a GAM336723 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336723 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336723 TNFRSF5 TTGCACTCCAGCCTG TNFRSF5 (Accession NM_152854.1) is another GAM336723 target A A

GGTGACA gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336723 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336723 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336723 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336727 IL1B CTGGCTCTAATAACC TGAGCTT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is a GAM336727 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336727 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336727 is therefore inhibition of IL1B, a GAM336727 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336727 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM336727 NOTCH1 CTGGCTCTAATAACC TGAGCTT Notch (Drosophila) Homolog 1 (translocation- associated) (NOTCH1, Accession NM_017617.2) is another GAM336727 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336727 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336727 is therefore inhibition of NOTCH1, a GAM336727 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336727 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336728 ACE TCAAGCAATTCTCGT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GCCTCAG (ACE, Accession NM_152831.1) is a GAM336728 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336728 is therefore inhibition of ACE, a GAM336728 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336729 BACE2 GAGAGAGGTAGAGGG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GAGCAGA NM_138992.1) is a GAM336729 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336729 is therefore inhibition of BACE2, a GAM336729 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336729 DLST GAGAGAGGTAGAGGG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GAGCAGA oxo- glutarat (DLST, Accession NM_001933.2) is another GAM336729 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336729 is therefore inhibition of

DLST, a GAM336729 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336729 GFAP GAGAGAGGTAGAGGG GFAP (Accession NM_002055.2) is another GAM336729 target gene. A A

GAGCAGA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336729 is therefore inhibition of GFAP. Accordingly, utilities of GAM336729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336730 HD CATCTCAGTCTATGT HD (Accession NM_002111.3) is a GAM336730 target gene. HD A A

CCTTGCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336730 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336730 is therefore inhibition of HD. Accordingly, utilities of GAM336730 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336730 PSEN2 CATCTCAGTCTATGT PSEN2 (Accession NM_012486.1) is another GAM336730 target gene. A A

CCTTGCT PSEN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336730 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336730 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336730 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336731 IGF1 AGATGGAGAAGTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TTCAGAT NM_000618.2) is a GAM336731 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336731 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336731 is therefore inhibition of IGF1, a GAM336731 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336731 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336731 S100B AGATGGAGAAGTGTT S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A

TTCAGAT NM_006272.1) is another GAM336731 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336731 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336731 is therefore inhibition of S100B, a GAM336731 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336731 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM336732 IGF1 AGATGGAGAAGTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TTCAGAT NM_000618.2) is a GAM336732 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336732 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336732 is therefore inhibition of IGF1, a GAM336732 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity

and therefore is associated with Alzheimer. Accordingly, utilities of GAM336732 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336732 S100B AGATGGAGAAGTGTT S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A TTCAGAT NM_006272.1) is another GAM336732 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336732 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336732 is therefore inhibition of S100B, a GAM336732 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336732 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM336734 GYPA GGCAGATGGGACTCT Glycophorin A (includes MN blood group) (GYPA, Accession A A GTGCCCA NM_002099.2) is a GAM336734 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336734 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336734 is therefore inhibition of GYPA, a GAM336734 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336734 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336736 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336736 target gene. APP A A GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM336736 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336736 is therefore inhibition of APP. Accordingly, utilities of GAM336736 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336738 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336738 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336738 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336738 is therefore inhibition of APPBP2, a GAM336738 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336738 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336738 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336738 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336738 is therefore inhibition of BACE2, a GAM336738 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336738 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336738 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336738 is therefore inhibition of FHL2, a GAM336738 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336738 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336738 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336738 is therefore inhibition of IGF1, a GAM336738 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336738 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336738 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336738 is therefore inhibition of

MME, a GAM336738 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336738 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336738 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336738 is therefore inhibition of PRND, a GAM336738 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336739 IGF1 TAGCAGATCTGTGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TCCTATG NM_000618.2) is a GAM336739 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336739 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336739 is therefore inhibition of IGF1, a GAM336739 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336739 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336740 BACE2 GTTTTGTTGTCTCTG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGTTGTA NM_012105.3) is a GAM336740 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336740 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336740 is therefore inhibition of BACE2, a GAM336740 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336740 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336743 GYPA TATGAATGTAAGGAA TGTGGGA A A Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is a GAM336743 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336743 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336743 is therefore inhibition of GYPA, a GAM336743 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336743 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336743 IGF1 TATGAATGTAAGGAA TGTGGGA A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336743 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336743 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336743 is therefore inhibition of IGF1, a GAM336743 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336743 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336743 MME TATGAATGTAAGGAA TGTGGGA A A Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007287.1) is another GAM336743 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336743 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336743 is therefore inhibition of MME, a GAM336743 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336743 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336743 VLDLR TATGAATGTAAGGAA TGTGGGA A A Very Low Density Lipoprotein Receptor (VLDLR, Accession NM_003383.1) is another GAM336743 target gene. VLDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VLDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of VLDLR BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336743 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336743 is therefore inhibition of VLDLR, a GAM336743 target gene which may play a crucial role in triglyceride metabolism and therefore is associated with Alzheimer. Accordingly, utilities of GAM336743 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with VLDLR.The function of VLDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336744 GYPA TATGAATGTAAGGAA TGTGGGA A A Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is a GAM336744 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336744 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336744 is therefore inhibition of GYPA, a GAM336744 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336744 IGF1 TATGAATGTAAGGAA A
A
TGTGGGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336744 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336744 is therefore inhibition of IGF1, a GAM336744 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336744 MME TATGAATGTAAGGAA A
A
TGTGGGA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007287.1) is another GAM336744 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336744 is therefore inhibition of MME, a GAM336744 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336744 VLDLR TATGAATGTAAGGAA Very Low Density Lipoprotein Receptor (VLDLR, Accession A A
TGTGGGA NM_003383.1) is another GAM336744 target gene. VLDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VLDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of VLDLR BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336744 is therefore inhibition of VLDLR, a GAM336744 target gene which may play a crucial role in triglyceride metabolism and therefore is associated with Alzheimer. Accordingly, utilities of GAM336744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with VLDLR.The function of VLDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336745 GYPA TATGAATGTAAGGAA Glycophorin A (includes MN blood group) (GYPA, Accession A A
TGTGGGA NM_002099.2) is a GAM336745 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336745 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336745 is therefore inhibition of GYPA, a GAM336745 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336745 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336745 IGF1 TATGAATGTAAGGAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGTGGGA NM_000618.2) is another GAM336745 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336745 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336745 is therefore inhibition of IGF1, a GAM336745 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336745 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336745 MME TATGAATGTAAGGAA TGTGGGA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007287.1) is another GAM336745 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336745 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336745 is therefore inhibition of MME, a GAM336745 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336745 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336745 VLDLR TATGAATGTAAGGAA TGTGGGA Very Low Density Lipoprotein Receptor (VLDLR, Accession NM_003383.1) is another GAM336745 target gene. VLDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VLDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of VLDLR BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336745 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336745 is therefore inhibition of VLDLR, a GAM336745 target gene which may play a crucial role in triglyceride metabolism and therefore is associated with Alzheimer. Accordingly, utilities of GAM336745 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with VLDLR.The function of VLDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336746 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336746 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target A A

binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336746 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336746 is therefore inhibition of APPBP2, a GAM336746 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336746 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336746 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336746 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336746 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336746 is therefore inhibition of BACE2, a GAM336746 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336746 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336746 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336746 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336746 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336746 is therefore inhibition of FHL2, a GAM336746 target gene which Contains four LIM domains and an

additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336746 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336746 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336746 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336746 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336746 is therefore inhibition of IGF1, a GAM336746 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336746 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336746 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336746 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336746 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336746 is therefore inhibition of MME, a GAM336746 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336746 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336746 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336746 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336746 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336746 is therefore inhibition of PRND, a GAM336746 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336746 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336747 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336747 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336747 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336747 is therefore inhibition of APPBP2, a GAM336747 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336747 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336747 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336747 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336747 is therefore inhibition of BACE2, a GAM336747 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM336747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336747 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336747 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336747 is therefore inhibition of FHL2, a GAM336747 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336747 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336747 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336747 is therefore inhibition of IGF1, a GAM336747 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336747 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336747 target gene. MME BINDING SITE is a target binding site found in the

5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336747 is therefore inhibition of MME, a GAM336747 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336747 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336747 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336747 is therefore inhibition of PRND, a GAM336747 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336749 APBB2 CATAAAATCAGAAAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
TATTACT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336749 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336749 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336749 is therefore inhibition of APBB2, a GAM336749 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336749 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336749 CNTF CATAAAATCAGAAAG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

TATTACT another GAM336749 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336749 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336749 is therefore inhibition of CNTF, a GAM336749 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336749 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336749 NCKAP1 CATAAAATCAGAAAG NCKAP1 (Accession NM_013436.2) is another GAM336749 target A A

TATTACT gene. NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336749 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336749 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM336749 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM336750 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336750 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336750 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336750 is therefore inhibition of APPBP2,

a GAM336750 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336750 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336750 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336750 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336750 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336750 is therefore inhibition of BACE2, a GAM336750 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336750 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336750 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336750 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336750 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336750 is therefore inhibition of FHL2, a GAM336750 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336750 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336750 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336750 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336750 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336750 is therefore inhibition of IGF1, a GAM336750 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336750 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336750 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336750 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336750 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336750 is therefore inhibition of MME, a GAM336750 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336750 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336750 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336750 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336750 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336750 is therefore inhibition of PRND, a GAM336750 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336750 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336751 DLST ACTGCACTCCAACCA GGCTGAC A A

Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336751 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336751 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336751 is therefore inhibition of DLST, a GAM336751 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336751 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336751 FHL2 ACTGCACTCCAACCA GGCTGAC A A

Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336751 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336751 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336751 is therefore inhibition of FHL2, a GAM336751 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336751 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336751 IGF1 ACTGCACTCCAACCA GGCTGAC A A

Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336751 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336751 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336751 is therefore inhibition of IGF1, a GAM336751 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336751 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336752 APBB2 TTCTGGGTTTTTGTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GGTTTGC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336752 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336752 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336752 is therefore inhibition of APBB2, a GAM336752 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336752 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336752 PIN1 TTCTGGGTTTTTGTG Protein (peptidyl- prolyl cis/trans isomerase) NIMA- A A
GGTTTGC interacting 1 (PIN1, Accession NM_006221.1) is another GAM336752 target gene. PIN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PIN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336752 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336752 is therefore inhibition of PIN1, a GAM336752 target gene which intervenes in cell cycle regulation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336752 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PIN1.The function of PIN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM336755 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336755 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336755 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336755 is therefore inhibition of APPBP2, a GAM336755 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336755 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336755 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336755 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336755 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336755 is therefore inhibition of BACE2, a GAM336755 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336755 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336755 FHL2 CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336755 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. A A

Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336755 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336755 is therefore inhibition of FHL2, a GAM336755 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336755 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336755 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336755 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336755 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336755 is therefore inhibition of HD. Accordingly, utilities of GAM336755 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336755 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336755 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336755 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336755 is therefore inhibition of IGF1, a GAM336755 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336755 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336755 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336755 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336755 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336755 is therefore inhibition of PRND, a GAM336755 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336755 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336756 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336756 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336756 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336756 is therefore inhibition of APPBP2, a GAM336756 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336756 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336756 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336756 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336756 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336756 is therefore inhibition of BACE2, a GAM336756 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336756 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336756 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336756 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336756 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336756 is therefore inhibition of FHL2, a GAM336756 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336756 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336756 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336756 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336756 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336756 is therefore inhibition of HD. Accordingly, utilities of GAM336756 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336756 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336756 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336756 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336756 is therefore inhibition of IGF1, a GAM336756 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336756 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336756 PRND CATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336756 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336756 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336756 is therefore inhibition of PRND, a GAM336756 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336756 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336757 ACT GAGGTCTGTTGTTCA GAAAAAT Activator of CAMP- responsive Element Modulator (CR (ACT, Accession NM_020482.3) is a GAM336757 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336757 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336757 is therefore inhibition of ACT, a GAM336757 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336757 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336760 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336760 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336760 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336760 is therefore inhibition of APPBP2, a GAM336760 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336760 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336760 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336760 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336760 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336760 is therefore inhibition of BACE2, a GAM336760 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336760 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336760 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336760 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336760 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336760 is therefore inhibition of FHL2, a GAM336760 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336760 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336760 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336760 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336760 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336760 is therefore inhibition of IGF1, a GAM336760 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336760 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336760 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336760 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336760 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336760 is therefore inhibition of MME, a GAM336760 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336760 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336760 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336760 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336760 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336760 is therefore inhibition of PRND, a GAM336760 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336760 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336761 GLUL CAGAGAATGGCACAG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

CTGTCCT NM_002065.3) is a GAM336761 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336761 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336761 is therefore inhibition of GLUL, a GAM336761 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336761 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336761 TNFSF5 CAGAGAATGGCACAG TNFSF5 (Accession NM_000074.1) is another GAM336761 target A A

CTGTCCT gene. TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336761 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336761 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM336761 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM336762 IAPP GTCTTGATCTCCTGA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a A A

CCTTGTG GAM336762 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336762 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336762 is therefore inhibition of IAPP, a GAM336762 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336762 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336762 IL1A GTCTTGATCTCCTGA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

CCTTGTG GAM336762 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336762 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336762 is therefore inhibition of IL1A, a GAM336762 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336762 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336763 ACE AGGGCTGTGGGTGTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GCTGTGC (ACE, Accession NM_000789.2) is a GAM336763 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336763 is therefore inhibition of ACE, a GAM336763 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336763 APBB2 AGGGCTGTGGGTGTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GCTGTGC 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM336763 target gene. APBB2 BINDING SITE1 through APBB2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by APBB2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE1 through APBB2 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336763 is therefore inhibition of APBB2, a GAM336763 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336763 ARHA AGGGCTGTGGGTGTG Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

GCTGTGC is another GAM336763 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336763 is therefore inhibition of ARHA, a GAM336763 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336763 CHAT AGGGCTGTGGGTGTG Choline Acetyltransferase (CHAT, Accession NM_020984.1) is A A

GCTGTGC another GAM336763 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336763 is therefore inhibition of CHAT, a GAM336763 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336763 FOS AGGGCTGTGGGTGTG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
GCTGTGC Accession NM_005252.2) is another GAM336763 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336763 is therefore inhibition of FOS, a GAM336763 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336763 LRP1 AGGGCTGTGGGTGTG Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
GCTGTGC macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM336763 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336763 is therefore inhibition of LRP1, a GAM336763 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM336763 SLC17A7 AGGGCTGTGGGTGTG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A
GCTGTGC NM_020309.1) is another GAM336763 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336763 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336763 is therefore inhibition of SLC17A7, a GAM336763 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM336763 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336764 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGTGAT a GAM336764 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336764 is therefore inhibition of FHL2, a GAM336764 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336764 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGTGAT NM_000618.2) is another GAM336764 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM336764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336764 is therefore inhibition of IGF1, a GAM336764 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336764 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGTGAT another GAM336764 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336764 is therefore inhibition of PRND, a GAM336764 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336765 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A GGGTGAT a GAM336765 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336765 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336765 is therefore inhibition of FHL2, a GAM336765 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336765 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336765 IGF1 ACTGCACTCCAGCCT A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
GGGTGAT NM_000618.2) is another GAM336765 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336765 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336765 is therefore inhibition of IGF1, a GAM336765 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336765 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336765 PRND ACTGCACTCCAGCCT A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
GGGTGAT another GAM336765 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336765 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336765 is therefore inhibition of PRND, a GAM336765 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336765 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336767 ADAMTS5 CTGAAATGCTGTTGA A Disintegrin- like and Metalloprotease (reprolysin type) with A
TTTTAGT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336767 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336767 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336767 is therefore inhibition of ADAMTS5, a GAM336767 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336767 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336768 FHL2 ACTGCACTCCAGCCT A A GGGTGAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM336768 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336768 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336768 is therefore inhibition of FHL2, a GAM336768 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336768 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336768 IGF1 ACTGCACTCCAGCCT A A GGGTGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336768 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336768 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336768 is therefore inhibition of IGF1, a GAM336768 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336768 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336768 PRND ACTGCACTCCAGCCT A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is

GGGTGAC another GAM336768 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336768 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336768 is therefore inhibition of PRND, a GAM336768 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336768 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336770 ADAMTS5 TGTGGCTAGTTTGAA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

CTGAGAT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336770 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336770 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336770 is therefore inhibition of ADAMTS5, a GAM336770 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336770 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336770 PLAU TGTGGCTAGTTTGAA Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

CTGAGAT is another GAM336770 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336770 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336770 is therefore inhibition of PLAU, a GAM336770 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with

Alzheimer. Accordingly, utilities of GAM336770 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336771 ADAMTS5 TGTGGCTAGTTTGAA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

CTGAGAT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336771 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336771 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336771 is therefore inhibition of ADAMTS5, a GAM336771 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336771 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336771 PLAU TGTGGCTAGTTTGAA Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

CTGAGAT is another GAM336771 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336771 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336771 is therefore inhibition of PLAU, a GAM336771 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM336771 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336772 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336772 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by

APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336772 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336772 is therefore inhibition of APPBP2, a GAM336772 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336772 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336772 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336772 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336772 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336772 is therefore inhibition of BACE2, a GAM336772 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336772 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336772 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336772 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336772 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336772 is therefore inhibition of FHL2, a GAM336772 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336772 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336772 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336772 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336772 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336772 is therefore inhibition of IGF1, a GAM336772 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336772 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336772 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336772 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336772 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336772 is therefore inhibition of MME, a GAM336772 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336772 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336772 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336772 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336772 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336772 is therefore inhibition of PRND, a GAM336772 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336772 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336773 APBA2 TCTGTGACTGTATTT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

TCCCAAA 2 (X11- I (APBA2, Accession NM_005503.2) is a GAM336773 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336773 is therefore inhibition of APBA2, a GAM336773 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336773 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336775 AVP AGAGACACAGACACA AVP (Accession NM_000490.2) is a GAM336775 target gene. AVP A A

TGGGAGA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336775 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336775 is therefore inhibition of AVP. Accordingly, utilities of GAM336775 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336775 FOS AGAGACACAGACACA V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A

TGGGAGA Accession NM_005252.2) is another GAM336775 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336775 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336775 is therefore inhibition of FOS, a GAM336775 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336775 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336775 HD AGAGACACAGACACA HD (Accession NM_002111.3) is another GAM336775 target gene. HD A A

TGGGAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336775 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336775 is therefore inhibition of HD. Accordingly, utilities of GAM336775 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336775 IGF1 AGAGACACAGACACA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGAGA NM_000618.2) is another GAM336775 target gene. IGF1 BINDING SITE1 through IGF1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 through IGF1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336775 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336775 is therefore inhibition of IGF1, a GAM336775 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336775 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM336775 MAPK10 AGAGACACAGACACA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A
TGGGAGA NM_138981.1) is another GAM336775 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336775 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336775 is therefore inhibition of MAPK10, a GAM336775 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336775 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336776 ADAM17 GCAAGTGCTGTCATA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TGGAAGA factor, (ADAM17, Accession NM_003183.3) is a GAM336776 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336776 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336776 is therefore inhibition of ADAM17, a GAM336776 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336776 APPBP2 GCAAGTGCTGTCATA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGAAGA Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336776 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336776 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336776 is therefore inhibition of APPBP2, a GAM336776 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336776 IGF1 GCAAGTGCTGTCATA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGAAGA NM_000618.2) is another GAM336776 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336776 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336776 is therefore inhibition of IGF1, a GAM336776 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336777 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336777 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336777 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336777 is therefore inhibition of APP. Accordingly, utilities of GAM336777 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336778 CAV1 ACAGGGCTAAGGATG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A

TTTGCTG NM_001753.3) is a GAM336778 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336778 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336778 is therefore inhibition of CAV1, a GAM336778 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336778 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336780 HTR2A TAGCAACCTTAATAT A A TTTACAG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is a GAM336780 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336780 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336780 is therefore inhibition of HTR2A, a GAM336780 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336780 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336781 PRND TACCAGTGTCAGCTT A A CCTGTGT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a GAM336781 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336781 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336781 is therefore inhibition of PRND, a GAM336781 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336781 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to GAM44.

GAM336782 PRND TACCAGTGTCAGCTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A

CCTGTGT GAM336782 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336782 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336782 is therefore inhibition of PRND, a GAM336782 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336782 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336783 MAPK10 AGCTACATTGTCTGC Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

TGGGTTT NM_138980.1) is a GAM336783 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336783 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336783 is therefore inhibition of MAPK10, a GAM336783 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336783 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336784 MAPK10 AGCTACATTGTCTGC Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

TGGGTTT NM_138980.1) is a GAM336784 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336784 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336784 is therefore inhibition of MAPK10, a GAM336784 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336784 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336785 CAV2 CCGTAAAATGTTCAA Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM336785 target A A

ATGTTTT gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336785 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336785 is therefore inhibition of CAV2, a GAM336785 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336785 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336785 PRND AAAGCTTTGTTCATT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is B A

GTATCTG another GAM336785 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336785 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336785 is therefore inhibition of PRND, a GAM336785 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336785 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336786 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336786 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336786 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336786 is therefore inhibition of APP. Accordingly, utilities of GAM336786 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336787 IGF1 TCACTGTAAACTCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTCCTG NM_000618.2) is a GAM336787 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336787 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336787 is therefore inhibition of IGF1, a GAM336787 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336787 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336788 DHCR24 AAAGTGTGTTATCTA 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GGTAGTC NM_014762.1) is a GAM336788 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336788 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336788 is therefore inhibition of DHCR24, a GAM336788 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336788 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336789 FLNB ATGCCCTTCCTCTTC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A

TGCCATG NM_001457.1) is a GAM336789 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336789 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336789 is therefore inhibition of FLNB, a GAM336789 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336789 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336789 GYPA ATGCCCTTCCTCTTC Glycophorin A (includes MN blood group) (GYPA, Accession A A

TGCCATG NM_002099.2) is another GAM336789 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336789 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336789 is therefore inhibition of GYPA, a GAM336789 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336789 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336790 PRND TATGGCAAAGTCACT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A

GATTTCC GAM336790 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336790 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336790 is therefore inhibition of PRND, a GAM336790 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336790 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336792 APPBP2 TGAGGGGGAAGGTGT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GTGTGTG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336792 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336792 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336792 is therefore inhibition of APPBP2, a GAM336792 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336792 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336792 CTSB TGAGGGGGAAGGTGT CTSB (Accession NM_147783.1) is another GAM336792 target gene. A A

GTGTGTG CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336792 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336792 is therefore inhibition of CTSB. Accordingly, utilities of GAM336792 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336792 GYPA TGAGGGGGAAGGTGT Glycophorin A (includes MN blood group) (GYPA, Accession A A

GTGTGTG NM_002099.2) is another GAM336792 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336792 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336792 is therefore inhibition of GYPA, a GAM336792 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336792 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336792 IL1A TGAGGGGGAAGGTGT GTGTGTG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336792 target gene. IL1A BINDING SITE1 and IL1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IL1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE1 and IL1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336792 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336792 is therefore inhibition of IL1A, a GAM336792 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336792 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336793 APPBP2 TGAGGGGGAAGGTGT GTGTGTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336793 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336793 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336793 is therefore inhibition of APPBP2, a GAM336793 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336793 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336793 CTSB TGAGGGGGAAGGTGT GTGTGTG CTSB (Accession NM_147783.1) is another GAM336793 target gene. A A

CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336793 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336793 is therefore inhibition of CTSB. Accordingly, utilities of GAM336793 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336793 GYPA TGAGGGGGAAGGTGT GTGTGTG Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM336793 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336793 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336793 is therefore inhibition of GYPA, a GAM336793 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336793 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336793 IL1A TGAGGGGGAAGGTGT GTGTGTG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336793 target gene. IL1A BINDING SITE1 and IL1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IL1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE1 and IL1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336793 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336793 is therefore inhibition of IL1A, a GAM336793 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336793 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336794 APBA2 AACCTGTCATTCCAA Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGACAGT 2 (X11- I (APBA2, Accession NM_005503.2) is a GAM336794 target gene. APBA2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336794 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336794 is therefore inhibition of APBA2, a GAM336794 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336794 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336794 FLNB AACCTGTCATTCCAA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A GGACAGT NM_001457.1) is another GAM336794 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336794 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336794 is therefore inhibition of FLNB, a GAM336794 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336794 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336795 BCHE TGGCTCTGTGCTTCT BCHE (Accession NM_000055.1) is a GAM336795 target gene. BCHE A A AGTATCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336795 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336795 is therefore inhibition of BCHE. Accordingly, utilities of GAM336795 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336795 PSEN2 TGGCTCTGTGCTTCT PSEN2 (Accession NM_000447.1) is another GAM336795 target gene. A A

AGTATCT PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336795 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336795 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336795 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336796 BACE GTTCACAGTTCAGCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

TGTAACA is a GAM336796 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336796 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336796 is therefore inhibition of BACE, a GAM336796 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336796 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336797 DHCR24 TGAGGGAGGAAGTTT 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GGGATGA NM_014762.1) is a GAM336797 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336797 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336797 is therefore inhibition of DHCR24, a GAM336797 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336797 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM44.

GAM336797 FLNB TGAGGGAGGAAGTTT GGGATGA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM336797 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336797 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336797 is therefore inhibition of FLNB, a GAM336797 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336797 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336798 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336798 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336798 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336798 is therefore inhibition of APPBP2, a GAM336798 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336798 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336798 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336798 RNA are set forth in Tables 6 and 7, hereby A A

incorporated herein.

Another function of GAM336798 is therefore inhibition of BACE2, a GAM336798 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336798 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336798 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336798 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336798 is therefore inhibition of FHL2, a GAM336798 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336798 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336798 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336798 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336798 is therefore inhibition of HD. Accordingly, utilities of GAM336798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336798 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336798 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336798 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336798 is therefore inhibition of IGF1, a GAM336798 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336798 PRND CATTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336798 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336798 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336798 is therefore inhibition of PRND, a GAM336798 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336799 APPBP2 CATTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336799 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336799 is therefore inhibition of APPBP2, a GAM336799 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336799 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336799 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336799 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336799 is therefore inhibition of BACE2, a GAM336799 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336799 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336799 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336799 is therefore inhibition of FHL2, a GAM336799 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336799 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336799 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM336799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336799 is therefore inhibition of HD. Accordingly, utilities of GAM336799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336799 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336799 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336799 is therefore inhibition of IGF1, a GAM336799 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336799 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336799 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336799 is therefore inhibition of PRND, a GAM336799 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336800 HTR2C GTTAGGAAATGTGCT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
TACTGGG NM_000868.1) is a GAM336800 target gene. HTR2C BINDING SITE is a

target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336800 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336800 is therefore inhibition of HTR2C, a GAM336800 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336800 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336801 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336801 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336801 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336801 is therefore inhibition of APP. Accordingly, utilities of GAM336801 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336804 IGF1 GAGTAACAGCACTCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CTGGAGT NM_000618.2) is a GAM336804 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336804 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336804 is therefore inhibition of IGF1, a GAM336804 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336804 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336806 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336806 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336806 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336806 is therefore inhibition of APP. Accordingly, utilities of GAM336806 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336807 BACE GAAACCTACACATCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

CACTAAC is a GAM336807 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336807 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336807 is therefore inhibition of BACE, a GAM336807 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336807 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336809 APOC1 TAAGGCATTTTTATG Apolipoprotein C- I (APOC1, Accession NM_001645.2) is a A A

GT GAM336809 target gene. APOC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APOC1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336809 is therefore inhibition of APOC1, a GAM336809 target gene which appears to modulate the interaction of apoe with beta- migrating vldl and inhibit binding of beta- vldl to the ldl receptor- related protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APOC1.The function of APOC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM336809 BACE A A GT TAAGGCATTTTTATG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) is another GAM336809 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336809 is therefore inhibition of BACE, a GAM336809 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336809 CAV1 A A GT TAAGGCATTTTTATG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM336809 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336809 is therefore inhibition of CAV1, a GAM336809 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336809 CAV2 A A GT TAAGGCATTTTTATG Caveolin 2 (CAV2, Accession NM_001233.2) is another GAM336809 target gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336809 is therefore inhibition of

CAV2, a GAM336809 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336809 FLNB TAAGGCATTTTTATG GT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM336809 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336809 is therefore inhibition of FLNB, a GAM336809 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336809 HTR2A TAAGGCATTTTTATG GT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM336809 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336809 is therefore inhibition of HTR2A, a GAM336809 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336809 MAPK10 TAAGGCATTTTTATG GT Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138981.1) is another GAM336809 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of A A

multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336809 is therefore inhibition of MAPK10, a GAM336809 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336809 SNCAIP TAAGGCATTTTTATG GT Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is another GAM336809 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336809 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336809 is therefore inhibition of SNCAIP, a GAM336809 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM336810 APLP2 GTCTTGTTCCAGTTT CTCAGCC Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM336810 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336810 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336810 is therefore inhibition of APLP2, a GAM336810 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336810 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336811 APLP2 GTCTTGTTCCAGTTT CTCAGCC Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM336811 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336811 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336811 is therefore inhibition of APLP2, a GAM336811 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336811 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336812 ACE TGTCTCAGTGTAGAG ACCCAGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM336812 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336812 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336812 is therefore inhibition of ACE, a GAM336812 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336812 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336814 A2M ACGCCGCTGTGGGAA AGCACTT Alpha- 2- macroglobulin (A2M, Accession NM_000014.3) is a GAM336814 target gene. A2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by A2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of A2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336814 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336814 is therefore inhibition of A2M, a GAM336814 target gene which inhibit all four classes of proteinases and therefore is associated with Alzheimer. Accordingly, utilities of GAM336814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with A2M.The function of A2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1653.

GAM336815 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336815 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336815 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336815 is therefore inhibition of APPBP2, a GAM336815 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336815 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336815 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336815 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336815 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336815 is therefore inhibition of BACE2, a GAM336815 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336815 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336815 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336815 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336815 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336815 is therefore inhibition of FHL2, a GAM336815 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336815 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336815 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336815 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336815 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336815 is therefore inhibition of IGF1, a GAM336815 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336815 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336815 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336815 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336815 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336815 is therefore inhibition of

MME, a GAM336815 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336815 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336815 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336815 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336815 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336815 is therefore inhibition of PRND, a GAM336815 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336815 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336816 BACE CTGTGCATGTTGATA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

TCCTGGC is a GAM336816 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336816 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336816 is therefore inhibition of BACE, a GAM336816 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336816 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336816 TRPM2 CTGTGCATGTTGATA TRPM2 (Accession NM_003307.1) is another GAM336816 target gene. A A

TCCTGGC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336816 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336816 is therefore inhibition of TRPM2, a GAM336816 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336816 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336817 BACE CTGTGCATGTTGATA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

TCCTGGC is a GAM336817 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336817 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336817 is therefore inhibition of BACE, a GAM336817 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336817 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336817 TRPM2 CTGTGCATGTTGATA TRPM2 (Accession NM_003307.1) is another GAM336817 target gene. A A

TCCTGGC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336817 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336817 is therefore inhibition of TRPM2, a GAM336817 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336817 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336818 ADAM10 TGAGGTGGGATCCCG A Disintegrin and Metalloproteinase Domain 10 (ADAM10,
A A
AGGCC Accession NM_001110.1) is a GAM336818 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336818 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336818 is therefore inhibition of ADAM10, a GAM336818 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM336818 APP TGAGGTGGGATCCCG APP (Accession NM_000484.1) is another GAM336818 target gene.
A A
AGGCC APP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336818 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336818 is therefore inhibition of APP. Accordingly, utilities of GAM336818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336818 BACE TGAGGTGGGATCCCG Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2)
A A
AGGCC is another GAM336818 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336818 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336818 is therefore inhibition of BACE, a GAM336818 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336818 TGFB1 TGAGGTGGGATCCCG TGFB1 (Accession NM_000660.1) is another GAM336818 target gene. A A

AGGCC TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336818 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336818 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336819 BACE ACTGGCCCACTCCAT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

TTAGGGT is a GAM336819 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336819 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336819 is therefore inhibition of BACE, a GAM336819 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336819 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336820 APBA1 TGAGTTTAAGCTAAG Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

AAGTCTG 1 (X11) (APBA1, Accession NM_001163.2) is a GAM336820 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336820 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336820 is therefore inhibition of APBA1, a GAM336820 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM336820 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336820 CNTF TGAGTTTAAGCTAAG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

AAGTCTG another GAM336820 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336820 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336820 is therefore inhibition of CNTF, a GAM336820 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336820 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336820 PSEN1 TGAGTTTAAGCTAAG PSEN1 (Accession NM_000021.2) is another GAM336820 target gene. A A

AAGTCTG PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336820 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336820 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336820 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336821 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336821 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336821 is therefore inhibition of APPBP2, a GAM336821 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336821 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336821 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336821 is therefore inhibition of BACE2, a GAM336821 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336821 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336821 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336821 is therefore inhibition of FHL2, a GAM336821 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336821 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM336821 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336821 is therefore inhibition of IGF1, a GAM336821 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336821 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336821 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336821 is therefore inhibition of MME, a GAM336821 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336821 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336821 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336821 is therefore inhibition of PRND, a GAM336821 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336822 SLC6A4 TCACATCCTCCCACT TCAAGTG Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is a GAM336822 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336822 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336822 is therefore inhibition of SLC6A4, a GAM336822 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336822 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM336823 IAPP TGGACAATGAAACCC TGACCTT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a GAM336823 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336823 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336823 is therefore inhibition of IAPP, a GAM336823 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336823 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336824 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336824 target A A

gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336824 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336824 is therefore inhibition of APPBP2, a GAM336824 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336824 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336824 BACE2 ACTGCACTCCAGCCT A A GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336824 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336824 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336824 is therefore inhibition of BACE2, a GAM336824 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336824 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336824 FHL2 ACTGCACTCCAGCCT A A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336824 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336824 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336824 is therefore inhibition of

FHL2, a GAM336824 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336824 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336824 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM336824 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336824 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336824 is therefore inhibition of IGF1, a GAM336824 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336824 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336824 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336824 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336824 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336824 is therefore inhibition of MME, a GAM336824 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336824 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336824 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336824 target gene. PRND BINDING SITE1 through PRND

BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336824 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336824 is therefore inhibition of PRND, a GAM336824 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336824 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336825 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336825 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336825 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336825 is therefore inhibition of APPBP2, a GAM336825 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336825 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336825 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336825 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336825 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336825 is therefore inhibition of BACE2, a GAM336825 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336825 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336825 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336825 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336825 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336825 is therefore inhibition of FHL2, a GAM336825 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336825 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336825 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336825 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336825 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336825 is therefore inhibition of IGF1, a GAM336825 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336825 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336825 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336825

target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336825 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336825 is therefore inhibition of MME, a GAM336825 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336825 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336825 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336825 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336825 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336825 is therefore inhibition of PRND, a GAM336825 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336825 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336826 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336826 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336826 is therefore inhibition of APPBP2, a GAM336826 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM336826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336826 BACE2 ACTGCACTCCAGCCT A A GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336826 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336826 is therefore inhibition of BACE2, a GAM336826 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336826 FHL2 ACTGCACTCCAGCCT A A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336826 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336826 is therefore inhibition of FHL2, a GAM336826 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336826 IGF1 ACTGCACTCCAGCCT A A GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336826 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336826 is therefore inhibition of IGF1, a GAM336826 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336826 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336826 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336826 is therefore inhibition of MME, a GAM336826 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336826 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336826 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336826 is therefore inhibition of PRND, a GAM336826 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336826 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336827 TGFB1 TCTTCCATTCCCCTC TGFB1 (Accession NM_000660.1) is a GAM336827 target gene. TGFB1 A A

CTACGCC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336827 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336827 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336827 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336828 TGFB1 TCTTCCATTCCCCTC TGFB1 (Accession NM_000660.1) is a GAM336828 target gene. TGFB1 A A

CTACGCC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336828 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336828 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336828 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336829 AVP GTACAGTGGGTGTAG AVP (Accession NM_000490.2) is a GAM336829 target gene. AVP A A

GGACCAG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336829 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336829 is therefore inhibition of AVP. Accordingly, utilities of GAM336829 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336829 FPRL1 GTACAGTGGGTGTAG FPRL1 (Accession NM_001462.1) is another GAM336829 target gene. A A

GGACCAG FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336829 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336829 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336829 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336829 MME GTACAGTGGGTGTAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGACCAG enkephalinase, (MME, Accession NM_007289.1) is another GAM336829 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336829 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336829 is therefore inhibition of MME, a GAM336829 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336829 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336830 IGF1 ATCTTTCTTAATTCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
AGGACTC NM_000618.2) is a GAM336830 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336830 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336830 is therefore inhibition of IGF1, a GAM336830 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336830 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336830 MME ATCTTTCTTAATTCC Membrane Metallo- endopeptidase (neutral endopeptidase, A A
AGGACTC enkephalinase, (MME, Accession NM_007287.1) is another GAM336830 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336830 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336830 is therefore inhibition of MME, a GAM336830 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336830 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336832 CRAT GTTGGGGTTTCAGTG A A GCAGTCA Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is a GAM336832 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336832 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336832 is therefore inhibition of CRAT, a GAM336832 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336832 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336832 OGDH GTTGGGGTTTCAGTG A A GCAGTCA Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM336832 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336832 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336832 is therefore inhibition of OGDH, a GAM336832 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336832 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM2014.

GAM336833 MME CTCAGTGGTTCAGAC Membrane Metallo- endopeptidase (neutral endopeptidase, A A
ACTGTTT enkephalinase, (MME, Accession NM_007288.1) is a GAM336833 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336833 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336833 is therefore inhibition of MME, a GAM336833 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336833 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336833 TRPM2 CTCAGTGGTTCAGAC TRPM2 (Accession NM_003307.1) is another GAM336833 target gene. A A
ACTGTTT TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336833 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336833 is therefore inhibition of TRPM2, a GAM336833 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336833 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336834 MME CTCAGTGGTTCAGAC Membrane Metallo- endopeptidase (neutral endopeptidase, A A
ACTGTTT enkephalinase, (MME, Accession NM_007288.1) is a GAM336834 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336834 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336834 is therefore inhibition of MME, a

GAM336834 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336834 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336834 TRPM2 CTCAGTGGTTCAGAC TRPM2 (Accession NM_003307.1) is another GAM336834 target gene. A A

ACTGTTT TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336834 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336834 is therefore inhibition of TRPM2, a GAM336834 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336834 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336835 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336835 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336835 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336835 is therefore inhibition of APPBP2, a GAM336835 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336835 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336835 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336835 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336835 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336835 is therefore inhibition of BACE2, a GAM336835 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336835 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336835 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336835 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336835 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336835 is therefore inhibition of FHL2, a GAM336835 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336835 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336835 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336835 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336835 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336835 is therefore inhibition of IGF1, a GAM336835 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336835 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336835 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336835 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336835 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336835 is therefore inhibition of MME, a GAM336835 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336835 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336835 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336835 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336835 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336835 is therefore inhibition of PRND, a GAM336835 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336835 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336836 APBA2 GTGTCTCTGTTGTGG Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
CAGTCAT 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM336836 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336836 is therefore inhibition of APBA2, a GAM336836 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336837 ABCD1 GTTGGGTGTGAGGGG ABCD1 (Accession NM_000033.2) is a GAM336837 target gene. ABCD1 A A

GGTCCCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336837 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336837 is therefore inhibition of ABCD1. Accordingly, utilities of GAM336837 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM336837 MAPT GTTGGGTGTGAGGGG Microtubule- associated Protein Tau (MAPT, Accession A A

GGTCCCA NM_173727.1) is another GAM336837 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336837 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336837 is therefore inhibition of MAPT, a GAM336837 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336837 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336838 ADAM10 ATGGCCTTTTCTCTT A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A

ATCCTGG Accession NM_001110.1) is a GAM336838 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336838 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336838 is therefore inhibition of ADAM10, a GAM336838 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336838 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM336838 ADAM17 ATGGCCTTTTCTCTT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

ATCCTGG factor, (ADAM17, Accession NM_021832.1) is another GAM336838 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336838 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336838 is therefore inhibition of ADAM17, a GAM336838 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336838 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336838 APBA1 ATGGCCTTTTCTCTT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

ATCCTGG 1 (X11) (APBA1, Accession NM_001163.2) is another GAM336838 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336838 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336838 is therefore inhibition of APBA1, a GAM336838 target gene which stabilises APP and inhibits

production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336838 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336838 FHL2 ATGGCCTTTTCTCTT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

ATCCTGG another GAM336838 target gene. FHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336838 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336838 is therefore inhibition of FHL2, a GAM336838 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336838 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336838 TNFSF5 ATGGCCTTTTCTCTT TNFSF5 (Accession NM_000074.1) is another GAM336838 target A A

ATCCTGG gene. TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336838 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336838 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM336838 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM336840 APBA2 GGAGGCAGTGGTTGC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

AGTGAGC 2 (X11- I (APBA2, Accession NM_005503.2) is a GAM336840 target gene. APBA2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336840 is therefore inhibition of APBA2, a GAM336840 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336840 APLP2 GGAGGCAGTGGTTGC AGTGAGC A A Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is another GAM336840 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of APLP2, a GAM336840 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM336840 APPBP2 GGAGGCAGTGGTTGC AGTGAGC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336840 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of APPBP2, a GAM336840 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336840 BACE GGAGGCAGTGGTTGC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1)
A A

AGTGAGC is another GAM336840 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of BACE, a GAM336840 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336840 CRAT GGAGGCAGTGGTTGC Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is
A A

AGTGAGC another GAM336840 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of CRAT, a GAM336840 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336840 FHL2 GGAGGCAGTGGTTGC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A

AGTGAGC another GAM336840 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of

FHL2, a GAM336840 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336840 IGF1 GGAGGCAGTGGTTGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
AGTGAGC NM_000618.2) is another GAM336840 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of IGF1, a GAM336840 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336840 PRND GGAGGCAGTGGTTGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
AGTGAGC another GAM336840 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336840 is therefore inhibition of PRND, a GAM336840 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336841 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336841 target gene. APPBP2 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336841 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336841 is therefore inhibition of APPBP2, a GAM336841 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336841 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336841 BACE2 CATTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336841 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336841 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336841 is therefore inhibition of BACE2, a GAM336841 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336841 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336841 FHL2 CATTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336841 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336841 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336841 is therefore inhibition of FHL2, a GAM336841 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336841 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336841 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336841 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336841 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336841 is therefore inhibition of HD. Accordingly, utilities of GAM336841 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336841 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336841 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336841 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336841 is therefore inhibition of IGF1, a GAM336841 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336841 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336841 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336841 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336841 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336841 is therefore inhibition of PRND, a GAM336841 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336841 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336842 B2M CTCAGATACTTGGGA GGTTGAG Beta- 2- microglobulin (B2M, Accession NM_004048.1) is a GAM336842 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336842 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336842 is therefore inhibition of B2M, a GAM336842 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336842 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM336842 FHL2 CTCAGATACTTGGGA GGTTGAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336842 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336842 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336842 is therefore inhibition of FHL2, a GAM336842 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336842 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336842 IGF1 CTCAGATACTTGGGA GGTTGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336842 target gene. IGF1 BINDING SITE is A A

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336842 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336842 is therefore inhibition of IGF1, a GAM336842 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336842 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336842 PRND CTCAGATACTTGGGA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGTTGAG another GAM336842 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336842 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336842 is therefore inhibition of PRND, a GAM336842 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336842 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336844 ACT AGATGGAGTTTGAGA Activator of CAMP- responsive Element Modulator (CR (ACT, A A

GGGAATA Accession NM_020482.3) is a GAM336844 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336844 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336844 is therefore inhibition of ACT, a GAM336844 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336844 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336844 IGF1 AGATGGAGTTTGAGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGAATA NM_000618.2) is another GAM336844 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336844 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336844 is therefore inhibition of IGF1, a GAM336844 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336844 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336845 ACT AGATGGAGTTTGAGA Activator of CAMP- responsive Element Modulator (CR (ACT, A A

GGGAATA Accession NM_020482.3) is a GAM336845 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336845 is therefore inhibition of ACT, a GAM336845 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM336845 IGF1 AGATGGAGTTTGAGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGAATA NM_000618.2) is another GAM336845 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336845 is therefore inhibition of IGF1, a GAM336845 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336846 HD CATTGGGTATCACCT HD (Accession NM_002111.3) is a GAM336846 target gene. HD A A

ATACAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336846 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336846 is therefore inhibition of HD. Accordingly, utilities of GAM336846 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336847 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336847 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336847 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336847 is therefore inhibition of APP. Accordingly, utilities of GAM336847 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336848 FLNB GTATGTGTGGGTTTC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A

TCAGCCT NM_001457.1) is a GAM336848 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336848 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336848 is therefore inhibition of FLNB, a GAM336848 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336848 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336849 FLNB GTATGTGTGGGTTTC TCAGCCT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is a GAM336849 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336849 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336849 is therefore inhibition of FLNB, a GAM336849 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336849 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336852 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336852 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336852 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336852 is therefore inhibition of APPBP2, a GAM336852 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336852 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336852 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336852 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336852 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336852 is therefore inhibition of BACE2, a GAM336852 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336852 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336852 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336852 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336852 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336852 is therefore inhibition of FHL2, a GAM336852 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336852 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336852 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336852 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336852 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336852 is therefore inhibition of IGF1, a GAM336852 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336852 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336852 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336852 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336852 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336852 is therefore inhibition of MME, a GAM336852 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336852 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336852 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336852 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336852 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336852 is therefore inhibition of PRND, a GAM336852 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336852 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336853 SLC6A4 GTGTCACAGATGGCC Solute Carrier Family 6 (neurotransmitter transporter, A A
GGAAGAG serotonin), Mem (SLC6A4, Accession NM_001045.1) is a GAM336853 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336853 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336853 is therefore inhibition of SLC6A4, a GAM336853 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336853 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM336854 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336854 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336854 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336854 is therefore inhibition of APPBP2, a GAM336854 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336854 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM336854 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336854 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336854 is therefore inhibition of BACE2, a GAM336854 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336854 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336854 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336854 is therefore inhibition of FHL2, a GAM336854 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336854 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336854 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336854 is therefore inhibition of IGF1, a GAM336854 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336854 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336854

target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336854 is therefore inhibition of MME, a GAM336854 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336854 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM336854 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336854 is therefore inhibition of PRND, a GAM336854 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336855 HTR2C TAGAAAGTGTCTCAT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A TTTAATA NM_000868.1) is a GAM336855 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336855 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336855 is therefore inhibition of HTR2C, a GAM336855 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336855 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336857 TNFSF5 ACAGCTCACTACAGC TNFSF5 (Accession NM_000074.1) is a GAM336857 target gene. A A

CTGGATT TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336857 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336857 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM336857 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM336860 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336860 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336860 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336860 is therefore inhibition of APP. Accordingly, utilities of GAM336860 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336861 APBB2 GTTATTGTCAGGGTC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TCCCTTT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336861 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336861 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336861 is therefore inhibition of APBB2, a GAM336861 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336861 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM44.

GAM336862 APBB2 GTTATTGTCAGGGTC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TCCCTTT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336862 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336862 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336862 is therefore inhibition of APBB2, a GAM336862 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336862 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336863 FHL2 ACTGCACTCCAGTCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

AGGTGAC a GAM336863 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336863 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336863 is therefore inhibition of FHL2, a GAM336863 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336863 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336863 IGF1 ACTGCACTCCAGTCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AGGTGAC NM_000618.2) is another GAM336863 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336863 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336863 is therefore inhibition of IGF1, a GAM336863 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336863 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336863 PRND ACTGCACTCCAGTCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

AGGTGAC another GAM336863 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336863 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336863 is therefore inhibition of PRND, a GAM336863 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336863 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336864 APBB2 ATGATGCTGGAACTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GACAACA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336864 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336864 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336864 is therefore inhibition of APBB2, a GAM336864 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336864 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336864 FPRL1 ATGATGCTGGAACTG FPRL1 (Accession NM_001462.1) is another GAM336864 target gene. A A

GACAACA FPRL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336864 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336864 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336864 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336866 IL1A AGGAATATAATTAAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is a A A
ACTTTGC GAM336866 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336866 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336866 is therefore inhibition of IL1A, a GAM336866 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336866 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336867 HD ATTCCCTTTAGCTCT HD (Accession NM_002111.3) is a GAM336867 target gene. HD A A
GATGGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336867 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336867 is therefore inhibition of HD. Accordingly, utilities of GAM336867 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336867 MAPT ATTCCCTTTAGCTCT Microtubule- associated Protein Tau (MAPT, Accession A A
GATGGCA NM_173727.1) is another GAM336867 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336867 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336867 is therefore inhibition of MAPT, a GAM336867 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336867 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336868 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336868 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336868 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336868 is therefore inhibition of APPBP2, a GAM336868 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336868 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336868 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336868 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336868 is therefore inhibition of BACE2, a GAM336868 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336868 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336868 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336868 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336868 is therefore inhibition of FHL2, a GAM336868 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336868 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336868 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336868 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336868 is therefore inhibition of HD. Accordingly, utilities of GAM336868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336868 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336868 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336868 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336868 is therefore inhibition of IGF1, a GAM336868 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336868 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336868 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336868 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336868 is therefore inhibition of PRND, a GAM336868 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336869 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336869 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336869 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336869 is therefore inhibition of APPBP2, a GAM336869 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336869 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336869 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336869 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336869 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336869 is therefore inhibition of BACE2, a GAM336869 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336869 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336869 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336869 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336869 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336869 is therefore inhibition of FHL2, a GAM336869 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336869 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336869 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336869 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336869 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336869 is therefore inhibition of IGF1, a GAM336869 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336869 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336869 MME ACTGCACTCCAGCCT GGGCAAC A A Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336869 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336869 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336869 is therefore inhibition of MME, a GAM336869 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336869 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336869 PRND ACTGCACTCCAGCCT GGGCAAC A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336869 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336869 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336869 is therefore inhibition of PRND, a GAM336869 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336869 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336870 BACE TTGCACTCCAGTCTG GGTGACA A A Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) is a GAM336870 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336870 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336870 is therefore inhibition of BACE, a GAM336870 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336870 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336870 FHL2 TTGCACTCCAGTCTG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGTGACA another GAM336870 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336870 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336870 is therefore inhibition of FHL2, a GAM336870 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336870 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336870 IGF1 TTGCACTCCAGTCTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGTGACA NM_000618.2) is another GAM336870 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336870 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336870 is therefore inhibition of IGF1, a GAM336870 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336870 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336870 PRND TTGCACTCCAGTCTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGTGACA another GAM336870 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336870 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336870 is therefore inhibition of PRND, a GAM336870 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336870 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336870 TNFRSF5 TTGCACTCCAGTCTG TNFRSF5 (Accession NM_152854.1) is another GAM336870 target A A GGTGACA gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336870 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336870 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336870 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336871 ACE AGAGGCAGAGGTTAC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A AGTAGTG (ACE, Accession NM_152831.1) is a GAM336871 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336871 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336871 is therefore inhibition of ACE, a GAM336871 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with

Alzheimer. Accordingly, utilities of GAM336871 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336871 PRND AGAGGCAGAGGTTAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
AGTAGTG another GAM336871 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336871 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336871 is therefore inhibition of PRND, a GAM336871 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336871 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336872 APBB2 GGCTGCAGTGAACTA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
TGATCGT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336872 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336872 is therefore inhibition of APBB2, a GAM336872 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336872 CNTF GGCTGCAGTGAACTA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A
TGATCGT another GAM336872 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336872 is therefore inhibition of CNTF, a GAM336872 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336872 FHL2 GGCTGCAGTGAACTA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGATCGT another GAM336872 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336872 is therefore inhibition of FHL2, a GAM336872 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336872 IGF1 GGCTGCAGTGAACTA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGATCGT NM_000618.2) is another GAM336872 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336872 is therefore inhibition of IGF1, a GAM336872 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM336872 MME GGCTGCAGTGAACTA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGATCGT enkephalinase, (MME, Accession NM_007289.1) is another GAM336872 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336872 is therefore inhibition of MME, a GAM336872 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336872 PRND GGCTGCAGTGAACTA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGATCGT another GAM336872 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336872 is therefore inhibition of PRND, a GAM336872 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336873 ADAMTS5 TAGGAGTGAAAATAA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

ACTCTGT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336873 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336873 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336873 is therefore inhibition of ADAMTS5, a GAM336873 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336873 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336873 CTNND2 TAGGAGTGAAAATAA ACTCTGT Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM336873 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336873 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336873 is therefore inhibition of CTNND2, a GAM336873 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336873 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336873 GYPA TAGGAGTGAAAATAA ACTCTGT Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM336873 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336873 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336873 is therefore inhibition of GYPA, a GAM336873 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336873 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336873 PLAU TAGGAGTGAAAATAA ACTCTGT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) is another GAM336873 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by A A

PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336873 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336873 is therefore inhibition of PLAU, a GAM336873 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM336873 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336873 PRND TAGGAGTGAAAATAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

ACTCTGT another GAM336873 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336873 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336873 is therefore inhibition of PRND, a GAM336873 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336873 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336874 MTNR1A TTCCCAGAAACCTGT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is a A A

GAGTGTG GAM336874 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336874 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336874 is therefore inhibition of MTNR1A, a GAM336874 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336874 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions,

has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336875 APBA1 GAGGCAGCAACTGGT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GAGGCAC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM336875 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336875 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336875 is therefore inhibition of APBA1, a GAM336875 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336875 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336875 TRPM2 GAGGCAGCAACTGGT TRPM2 (Accession NM_003307.1) is another GAM336875 target gene. A A

GAGGCAC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336875 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336875 is therefore inhibition of TRPM2, a GAM336875 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM336875 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336876 PSEN1 TGCATGCTCTTCATG PSEN1 (Accession NM_000021.2) is a GAM336876 target gene. PSEN1 A A

AGAATCT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336876 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336876 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336876 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336877 PSEN1 TGCATGCTCTTCATG PSEN1 (Accession NM_000021.2) is a GAM336877 target gene. PSEN1 A A

AGAATCT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336877 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336877 is therefore inhibition of PSEN1. Accordingly, utilities of GAM336877 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM336878 FHL2 ACTGCACTCTAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GAGCAAC a GAM336878 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336878 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336878 is therefore inhibition of FHL2, a GAM336878 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336878 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336878 IGF1 ACTGCACTCTAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GAGCAAC NM_000618.2) is another GAM336878 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336878 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336878 is therefore inhibition of IGF1, a GAM336878 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336878 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336878 PRND ACTGCACTCTAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GAGCAAC another GAM336878 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336878 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336878 is therefore inhibition of PRND, a GAM336878 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336878 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336879 ADAM17 TTGCCCAGGCTAGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TGCAGTG factor, (ADAM17, Accession NM_003183.3) is a GAM336879 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336879 is therefore inhibition of ADAM17, a GAM336879 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336879 CHAT TTGCCCAGGCTAGAG Choline Acetyltransferase (CHAT, Accession NM_020984.1) is A A
TGCAGTG another GAM336879 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of CHAT, a GAM336879 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336879 HTR2A TTGCCCAGGCTAGAG A A TGCAGTG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM336879 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of HTR2A, a GAM336879 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336879 IAPP TTGCCCAGGCTAGAG A A TGCAGTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM336879 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.
